GOVERNMENTAL FINANCES IN
THE UNITED STATES 1950

GOVERNMENTS DIVISION
Allen S. Havel, Chief

G-GF50-No.2

Washington 25, D. C.

August 1951

General revenue of all governments in the United States in the 1950 fiscal year¹ totaled \$57.6 billion, or \$379 per capita. Taxes provided \$54.6 billion, or \$360 per capita. The remaining \$2.9 billion represented charges for governmental services and other nontax revenue. The Federal Government received almost seven-tenths of all taxes, \$37.7 billion, as against the \$16.9 billion of State and local government tax revenue.

Figures presented in this report relate to "general revenue"—i.e., revenue, including all taxes, received in the exercise of general-government functions, as distinguished from the management of enterprises and the administration of trust and sinking funds. Hence the gross receipts of water, electric, gas supply, and other government-owned enterprises are excluded, and only any net amounts provided for governmental purposes by such enterprises are

included with general revenue (see definitions, page 11).

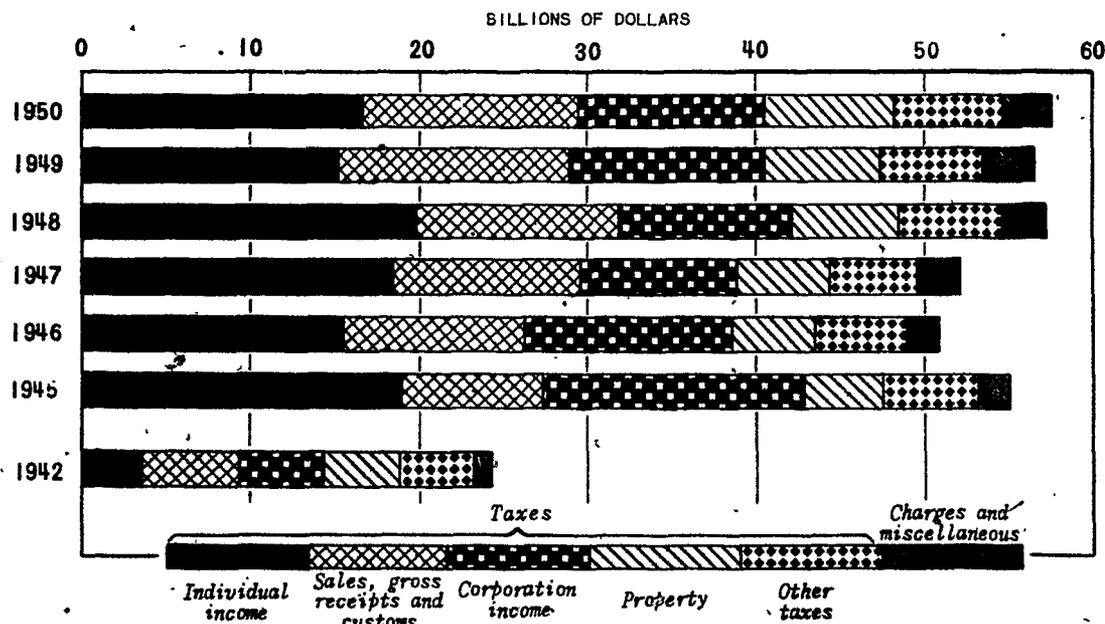

To avoid multiple counting, revenue aggregates in this report which relate to more than one of the three levels of government—Federal, State, and local—are shown net of intergovernmental aid transactions among the levels of government concerned, except when otherwise stated. Thus, a net total of \$21.3 billion in State-and-local general revenue in 1950 is shown, which is less than the sum of the \$11.9 billion of State revenue plus the \$13.5 billion of local government revenue mainly because of the \$4.0 billion in aid from States which the latter amount includes. Similarly, all intergovernmental aid revenue, including that from the Federal Government, is omitted from Federal-State-local totals here reported.

RECENT REVENUE TRENDS

Total general revenue of all public units combined in 1950 was up \$1.1 billion, or 1.9 percent, from the 1949 amount. This increase was the net result of a small decrease in Federal revenue and marked increases in revenues of State and local governments.

¹Revenue data are for fiscal years of the various governments ended within the specified calendar year, with minor exceptions. Fiscal years of the Federal Government and of most State and local governments end on June 30. Fiscal years of a few States and of numerous local governments end on other dates.

FIG. I—GOVERNMENTAL REVENUE, BY SOURCE: 1942-1950

As indicated by figure 1 on page 1, the 1950 revenue total was over \$0.3 billion higher than the previous record level of 1948, when revenue of all governments in the Nation amounted to \$57.2 billion.

Most major tax sources contributed to the 1949-1950 rise in revenue. Property tax collections were up over \$0.5 billion, or 8 percent, social insurance taxes rose nearly \$0.5 billion, or 14 percent, and most other categories increased at rates ranging from 2 percent to 10 percent. However, these increases were partially offset by a drop in collections of corporation income taxes of \$0.8 billion, or 7 percent. A small decrease is also shown for revenues from death and gift taxes.

Governmental revenue in 1950 was 137 percent higher than that of 1942. This trend was, of course, accompanied by an increase in population and a sharp rise in the scale of the Nation's economy in terms of such measures as total income payments and gross national product.² These changes may be summarized, for convenient reference, as follows:

Item	1950	1949	1946	1942
Population including armed forces overseas*	151.7	149.1	141.4	134.8
National income**	\$239.0	\$216.7	\$180.3	\$137.1
Gross national product**	282.6	257.3	211.1	181.6

*As of July 1; in millions
**Calendar year; in billions

²See Survey of Current Business, July 1951.

Total State and local revenue rose by \$1.6 billion, or 8 percent, between 1949 and 1950, as reflected in figure 2 below. Although this rise is less than that in any year since 1946, it exceeds the rise which occurred in the entire 3 years ending with 1945. Tax collections were up \$1.2 billion, or 8 percent, in 1950 as compared with 1949 and provided nearly three-fourths of the additional amount of State and local revenue. However, a faster rise occurred in the amount of aid received from the Federal Government—up 17 percent. Charges and miscellaneous nontax revenue was up 6 percent.

Revenue of State governments exhibited a similar trend, rising by \$0.9 billion or 8 percent from the 1949 level, somewhat less than from 1948 to 1949, but more than in the 3-year period, 1942-1945. Most of the 1949-50 change involved tax revenue, the remainder arising principally from additional aid received by the States from the Federal Government. The sharp 1947-48 increase in State tax revenues was partly a result of the enactment by many States, in 1947, of new taxes and tax rate increases. Although additional tax legislation contributed to the much smaller annual rises in State tax yields in 1949 and 1950, such action was less widespread in this period than in 1947. With limited exceptions, tax changes adopted in 1950 will be first effective in 1951.³ The 1949-50 rise in State tax collections mainly resulted

³For later figures see the forthcoming Census Bureau report, *State Tax Collections in 1951*, (to be issued in August 1951).

from increased yields of taxes on sales and gross receipts and individual income.

Total revenue of local governments amounted to \$13.5 billion in 1950, up 9 percent from 1949 or 92 percent from 1942. About \$0.6 billion of the 1949-50 increase of \$1.1 billion was contributed by local tax yields. Aid received from other governments was up nearly \$0.4 billion, or 10 percent. The remainder was derived from charges and miscellaneous revenue, which rose 9 percent. For the eight-year interval, 1942-50, local tax yields rose 73 percent as compared with increases of 132 percent and 125 percent in local revenues from fiscal aid and from other nontax sources, respectively.

All major types of local governments shared in the 1949-50 rise in general revenue. The largest increase, almost \$0.4 billion, or 11 percent, applied to school districts. Nearly one-half of this rise was accounted for by increased fiscal aid received from other governments, principally from the States. City revenue was up slightly less than that of school districts, or 7 percent, and county revenue was up about \$0.3 billion, or 9 percent.

Summary revenue statistics for the Federal Government, States, and local governments appear in table 1, and data by type of tax in table 2.

MAIN REVENUE SOURCES

Individual income taxes provided 29 percent of all governmental revenue in 1950, yielding \$16.5 billion or \$109 per capita. Next in fiscal importance were taxes based on sales and gross

receipts (including Federal excise taxes and customs duties), which amounted to \$13.0 billion, or \$86 per capita, and thus contributed 23 percent of total governmental revenue. Corporation income taxes accounted for 19 percent, property taxes for 13 percent, other taxes for 12 percent, and nontax sources for 5 percent of all governmental revenue in 1950.

Table 3 indicates the percentage distribution of revenue, by sources, in 1950 and 1942, for the various levels of government.

Property taxes continue to constitute the largest single class of State-and-local revenue, yielding \$7.4 billion, or \$49 per capita, in 1950. Of this sum, about \$0.3 billion represented State property tax collections, the remainder being local revenue. Sales and gross receipts taxes—primarily State rather than local levies—ranked next as a source of State-and-local revenue, providing \$5.2 billion in 1950. All other taxes of State and local governments yielded \$4.4 billion (including unemployment insurance tax collections of \$1.0 billion); Federal aid provided \$2.1 billion, and other nontax sources \$2.3 billion.

Fiscal aid—almost all from the States (including Federal aid channeled through State governments)—comprised 31 percent of local government revenue in 1950, counties and school districts being particularly so benefited. Property taxes in 1950 contributed about nine-tenths of all tax revenue, or more than half of all general revenue, of local governments.

Revenue data for particular types of local governments, by major sources, are presented in table 4.

FIG. 2—STATE AND LOCAL GOVERNMENT REVENUE, BY SOURCE AND BY TYPE OF GOVERNMENT: 1942-1950

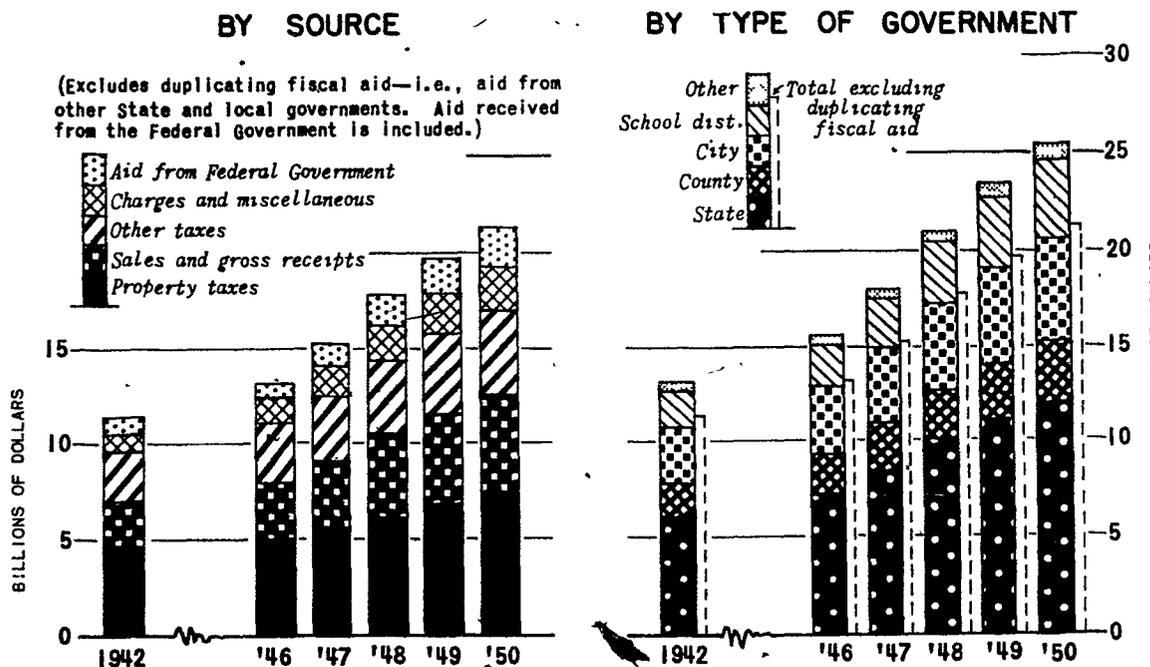

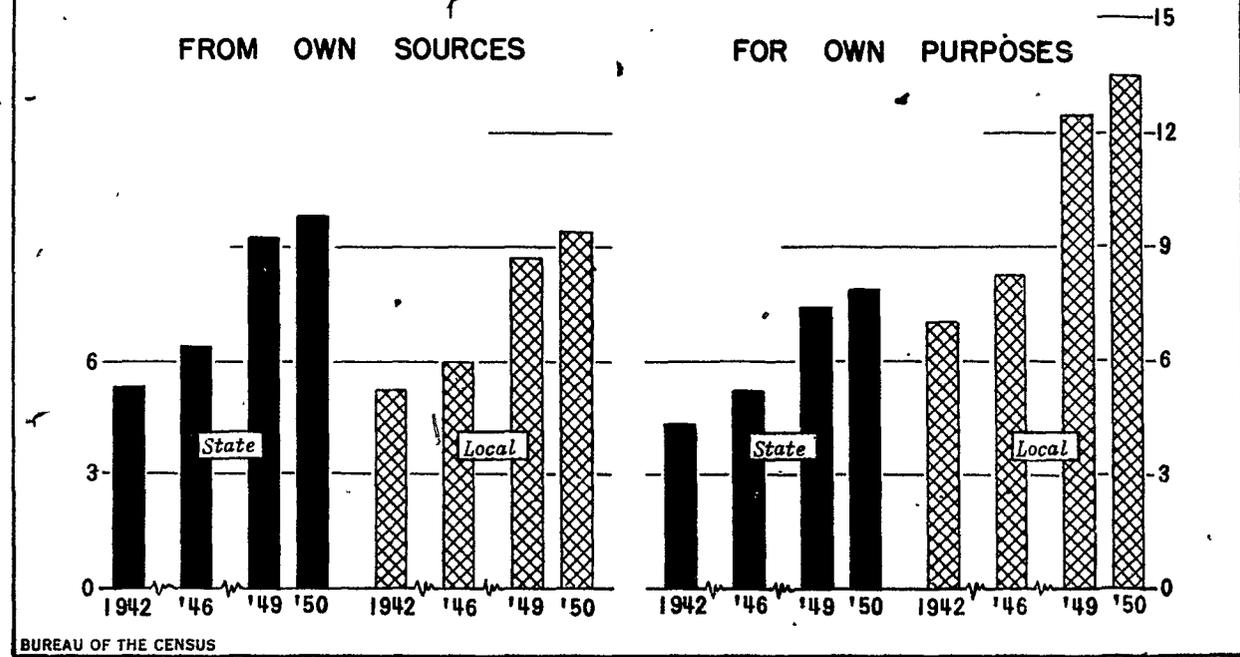

FIG. 3—STATE AND LOCAL GOVERNMENT REVENUE FROM OWN SOURCES AND FOR OWN PURPOSES: 1942-1950

THE REVENUE SHARE OF EACH GOVERNMENT LEVEL

The presentation of revenue and expenditure data is complicated by transfers of fiscal aid among governments. By far the largest sums thus handled involve Federal aid to State Governments (\$2.0 billion in 1950), including amounts subsequently apportioned to local governments, and State aid to local governments (\$4.0 billion in 1950). In addition, relatively small amounts of aid are paid by the Federal Government direct to local governments and by local governments to other local governments (principally, by counties to school districts) and to State governments. As stated on page 1, Federal-State-local and State-and-local aggregates in this report omit, to avoid multiple counting, the amounts of fiscal aid transfers among the levels of governments concerned.

Data above and in tables 1 to 4 include, as revenue of particular levels and types of government, sums received as aid from other governments. However, the share of a valid net total of governmental revenue which is attributable to each major level of government—Federal, State, and local—depends on the way in which fiscal aid transfers are interpreted. Each share may be measured "before aid," or "after aid." The former type of treatment merely involves, for each level, the exclusion of any aid received from other governments. The result is a figure as to revenue "from own sources." By the other method of treatment, aid received from other governments is included, but aid paid is deducted, thus providing a figure as to revenue available "for own purposes." The results of such alternative treatment of Federal, State, and local revenue in 1950 and six prior years are set forth in table 5.⁴

The following tabulation shows the percent distribution of governmental revenue in 1950, according to each of these two approaches:

Level of government	Revenue from own sources		Revenue for own purposes	
	1950	1942	1950	1942
Total.....	100.0	100.0	100.0	100.0
Federal.....	66.6	56.4	63.0	53.0
State.....	17.1	21.9	13.6	18.0
Local.....	16.3	21.7	23.3	29.0

Similarly, figure 3 depicts the trends of State revenue and local government revenue since 1942 on each basis.

SOURCES AND PROCEDURES

Sources of data.—Statistics herein concerning revenue of the Federal Government for the fiscal years 1950, 1949, 1948, 1947, 1946, 1945,

⁴Principally because the governmental units involved do not have identical fiscal-year periods, total amounts, for all governments together, of aid received and aid paid are not absolutely the same, so that the Federal-State-local aggregate of revenue "from own sources" differs slightly from that of revenue "for own purposes" in the respective years.

and 1942 were derived from the 1952, 1951, 1950, 1949, 1948, 1947, and 1944 issues, respectively, of The Budget of the United States Government, except that amounts of refunds of internal revenue taxes were obtained from the Annual Report of the Commissioner of Internal Revenue for each fiscal year involved.

As indicated by the definitions presented on page 11, Census Bureau compilation of State and local government revenue data involves deduction from gross tax receipts of any amounts of tax refunds and also the exclusion from reported revenue of any receipts arising from recovery by the government of amounts previously expended or from the sale of governmental assets.

In order to arrive at Federal Government amounts substantially comparable with State and local data, and to present generally consistent Federal-State-local aggregates, similar treatment has been applied to Federal data presented in this report. Thus, the amounts shown as Federal revenue from various types of taxes, in

table 2, are net of refunds of such taxes paid during the respective years; and Federal revenue from "charges and miscellaneous" sources is exclusive of significant identifiable nonrevenue receipts—which in 1945 and 1946 included large amounts of reimbursements under the defense-aid program and from renegotiation of contracts, and in 1946, 1947, and 1948, included sizeable receipts from the disposition of surplus property.

These and lesser items accounting for the difference between 1950 figures on total receipts of general and special accounts appearing in The Budget of the United States Government and the total Federal revenue amounts for 1950 presented in this report are shown in the table on page 4, together with page references to the sources of information employed. Similar reconciliations as to the Federal revenue figures shown herein for years prior to 1950 are presented in the Census Bureau reports on "Governmental Revenue" for 1947, 1948, and 1949. Both of the sets of totals which are reconciled in the tabulation are to be distinguished from other financial aggregates for the Federal Government, such as the totals of "budget receipts" and "receipts from the public" shown in Federal budget documents.

Statistics of State general revenue are from the Census Bureau report, Compendium of State Government Finances in 1950.

Local government data for 1942 are from the Census Bureau publication, Revised Summary of State and Local Government Finances in 1942. Other back-year figures for local governments (with exceptions noted below) are from the Census Bureau report, Governmental Revenue in 1949, which describes the sources and methods used. The 1949 local government figures shown herein have been revised slightly, reflecting availability of data from the Census Bureau report, Compendium of City Government Finances in 1949, since preparation of the 1949 report on governmental revenue.

The 1945 through 1949 figures for the 397 cities having more than 25,000 inhabitants in 1940 are from the Census Bureau annual series on "City Finances." Estimates of 1950 general revenue for these cities are based on a rate of change from 1949 to 1950 for a random stratified sample of these governmental units.

The 1945 and 1946 figures for counties are from the Census Bureau annual series on "County Finances," which was discontinued after publication of the report for 1946. The 1947, 1948, 1949, and 1950 county figures were estimated on the basis of the rates of change from 1946 to the specified years for a random stratified sample of these governmental units.

The levels of stratification and coverage of the two classes of governmental units are shown in the adjoining column.

For the very large cities, and for some counties and smaller cities, data were obtained by field compilation from official sources. Mail canvass was used to obtain the necessary information from most counties and smaller cities.

Total.....	3,050	246	226

Statistics of school-district revenue in 1950 are based on information obtained from State agencies and from the United States Office of Education. In the case of 5 States for which 1950 revenue figures were not available, estimates were made on the basis of revenue statistics for prior years, supplemented with data as to property tax levies to be collected in 1950, statistics of State aid paid to local schools in 1950, and data as to trends of school-district revenue in other similar States.

Fiscal year 1950 revenues of other local governments were arrived at by sampling methods. Current revenue figures were collected by mail canvass or from State sources for a stratified sample of these governments. Sample units were selected on a random basis. The sample design provides for complete coverage of townships and special districts having annual general revenue or indebtedness of more than \$1 million. For these classes of governments, only minor estimation was required as to missing items.

For cities having 2,500 to 25,000 inhabitants, estimates were made by applying to "benchmark" statistics for these governments from the 1942 Census of Governments, ratios of change from 1942 to 1950 computed from statistics of the sample units.

Estimates as to the smallest size-class cities (having less than 2,500 inhabitants) and small townships and special districts (having annual general revenue and indebtedness of less than \$1 million) were made on the basis of averages for each type of government, computed from reports of the sample units.

Factors affecting estimates.—The estimates presented in this report based on sample data are subject to sampling variation that may cause them to differ somewhat from the results that would have been obtained from a complete canvass of all units. The estimate of State and local government general revenue is subject to a relative sampling error of approximately

NOTE: Because of rounding to the nearest million, detail does not always add to totals. ¹Excluding duplicating inter-governmental aid: Federal-State-local totals include no aid receipts; State-local totals include only aid received from the Federal Government. ²For sources and explanation of derivation, see pages 4-5. ³Data are based on estimates, in part; see pages 4-6. ⁴Revised. ⁵Federal aid paid to State and local governments during its specified fiscal year, taken as being substantially equivalent to Federal aid received by such governments during their respective fiscal years in the absence of comprehensive post-1942 data as to aid received by local governments direct from the Federal Government. ⁶Per capita figures for 1950 and for 1942 are computed on the basis of estimated population of continental United States, including armed forces overseas, as of July 1, 1950 (151,689 thousand) and as of July 1, 1942 (134,831 thousand), respectively. It is to be noted that these population totals are larger than the total populations of the 48 States and of the various types of local governments, particularly in the case of cities and of "other" units (i.e., townships and special districts).

0.4 percent and the estimate of local government general revenue to a relative sampling error of approximately 0.7 percent.⁵ The estimate of total local government taxes is subject to a relative sampling error of less than 1.0 percent. Estimates for the minor categories of taxes, for aid received, and for other nontax revenue are likely to have a somewhat higher relative sampling variation. Similarly, estimates with respect to particular types of local government are subject to somewhat greater sampling variation than the estimated aggregates for all local governments.

In addition to the effects of sampling variation, the estimates may be affected by the failure of some governmental units to report. Such nonresponse may introduce a bias into the estimates because of possible selectivity in

⁵In repeated surveys using the same sampling and estimating procedures, the chances are that 2 estimates out of 3 would be within the specified percentage of the results that would be obtained from a complete enumeration; 19 out of 20 would be within double that percentage.

the reporting governments. Intensive efforts have been made to reduce the possible effects of such bias by concentrating on obtaining reports from all units in the sample, particularly the large ones. However, no effort has been made to measure or adjust for any possible bias due to nonresponse.

Both the estimates and the completely reported data are affected by the quality of the basic reports of revenue received from the governmental officials themselves. Explicit definitions and instructions to officials, intensive examination of reported data and comparison with other sources, and supplementary correspondence with reporting officials are used to promote completeness and uniformity of reporting.

ACKNOWLEDGMENT

The cooperation and assistance of State and local government officials who provided information for this report is gratefully acknowledged.

NOTE: Data are based on estimates, in part; see pages 4-6. City amounts for 1949 are revised to incorporate data from the Census Bureau report, *Compendium of City Government Finances in 1949*; local government totals are adjusted accordingly. ¹Comprises incorporated places with powers of general government. These include units known locally as villages, boroughs, and (except in New England States and in New York and Wisconsin) towns, as well as cities. ²Comprises only units of school administration that are independent units of local government and not school systems operating as administrative segments of State, county, city, and township governments. ³Comprises special districts and townships, including towns in New England States, New York, and Wisconsin. ⁴Includes an unsegregable amount of other taxes. ⁵Any amounts derived from income taxes and death and gift taxes are classified as "licenses, permits, and other," except for cities having more than 250,000 inhabitants.

NOTE: Because of rounding to nearest million, detail does not always add to totals. Difference in total amounts of fiscal aid revenue and fiscal aid payments primarily reflect variance in fiscal years among governments.

¹Data are based on estimates, in part; see pages 4-6.

²Comprises money grants and shared revenue; grants in kind and loans are excluded.

³Revised.

DEFINITIONS OF TERMS

Principal revenue concepts for the Census Bureau's uniform classification of State and local government finances, as applied to this report, are defined below. Additional explanations, especially as to the treatment of Federal revenue and of intergovernmental fiscal aid in arriving at revenue aggregates for two or more levels of government, are provided in the text and tables. Comprehensive glossaries appear in the Census Bureau annual "Compendium" reports on State and city government finances.

AID RECEIVED FROM OTHER GOVERNMENTS.—Amounts of revenue received by a government from another government—Federal, State, or local—including amounts received for discretionary redistribution to other governments, for use in performing specific functions or for general financial support. Included are grants from unspecified sources and from earmarked revenues or funds, payments in lieu of taxes, and allocated shares of taxes levied and collected by other governments, but not locally collected and retained shares of State-imposed taxes. Amounts received by States from the Federal Government include sums for reapportionment to local governments, other than sums merely channeled through State governments to specific local governments without State discretion as to distribution (such amounts are classified as received directly by the local governments from the Federal Government). Aid received does not include loans, the value of aid in kind rather than cash—e.g., free transfers of surplus property or of commodities—or reimbursements received for contractual services, commodities, or property furnished to other governments (such reimbursements are included in "CHARGES AND MISCELLANEOUS" general revenue).

CHARGES AND MISCELLANEOUS.—All nontax general revenue other than aid received from other governments. Comprises charges for current services, special assessments for capital improvements, interest, rents, royalties, donations, etc., and, as to States and local governments, net contributions from government-owned enterprises. Payments exacted from individuals or corporations for the privilege of engaging in specified activities are reported in the appropriate "taxes" category.

GENERAL REVENUE.—All revenue from general government sources. Revenue comprises all cash receipts other than from borrowing, disposal of assets, recovery of amounts previously expended, or agency transactions, but net of refunds of amounts previously received. General-government sources consist of all taxes, all aid received from other governments (except amounts directly for enterprises), and charges and miscellaneous revenues arising from the conduct of general government activities. General revenue includes net contributions from enterprises. Revenue of

special assessment and other special revenue funds of the government and of its administrative boards and agencies is included, as well as that of the general fund. Any amounts of taxes or other revenue from general-government sources credited directly to sinking, trust, and enterprise funds are classified as general revenue. Census procedures call for reporting general revenue in terms of amounts collected (preferably) or deposited.

TAXES.—Compulsory contributions exacted by a government for public purposes. Tax figures represent amounts of the collections, current and delinquent, with penalties and interest, and before deduction of administrative costs, but after deduction of refunds and excluding impounded amounts paid under protest. State tax revenue includes local shares of State-imposed taxes, except any amounts locally collected and retained. (See AID RECEIVED FROM OTHER GOVERNMENTS.) State collection and distribution of locally imposed taxes, however, is an agency transaction and such tax proceeds are reported as tax revenue of the local government concerned and not as State revenue. Proceeds from taxes imposed by one local government and collected for it by another and locally collected and retained shares of State taxes are classified as tax revenue of the final receiving government.

Corporation Income.—Taxes on corporations and unincorporated businesses (when taxed distinctively from individual income) measured by net income.

Death and Gift.—Taxes imposed on the transfer of property at death, in contemplation of death, or as a gift.

Individual Income.—Taxes on individuals measured by net income and taxes distinctively imposed on special types of income (e.g., interest, dividends, income from intangibles, etc.).

Property.—Taxes conditioned on ownership of property and measured by its value. Includes general property taxes relating to property as a whole, real and personal, tangible and intangible, whether taxed at a single rate or at classified rates, and taxes on selected types of property, such as motor vehicles or certain or all intangibles.

Sales and Gross Receipts.—Taxes, including "licenses" at more than nominal rates, based on the volume or value of transfers of goods or services, upon gross receipts therefrom, or upon gross income, and related taxes levied on use, storage, production, importation, or consumption of goods. Excludes distinctively imposed severance taxes.

Social Insurance.—Taxes on employers' and employees for the specific purpose of financing unemployment compensation and other social insurance programs.

CENSUS BUREAU REPORTS ON GOVERNMENTS

RECOMMENDED COMPLETE CITATION FOR THIS REPORT:

U. S. Bureau of the Census, Governmental Revenue in 1950 (Governmental Finances in the United States: 1950, No. 2), Washington, D. C., August 1951, 12 pp. tables.
