Washington 25, D. C.

Series P-25, No. 121

ESTIMATES OF THE POPULATION OF THE UNITED STATES, BY AGE, COLOR, AND SEX: JULY 1, 1950 TO 1955

(This report includes provisional estimates for July 1, 1955; those for 1952 to 1954 supersede the corresponding figures published in Current Population Reports, Series P-25, Nos. 93 and 101)

There were more than 28 million children of elementary school age on July 1, 1955, or about 6 million more than there were at the beginning of this decade, according to estimates of the population of the United States, by age, color, and sex, for July 1, 1955, released today by Robert W. Burgess, Director, Bureau of the Census, Department of Commerce. This report gives figures for (1) the total population of the United States including Armed Forces overseas, (2) the population residing in continental United States (excluding Armed Forces overseas), and (3) the civilian population.

INDICATED CHANGES

Age composition.--Between April 1, 1950, and July 1, 1955, the total population of the United States (including Armed Forces overseas) increased by about 14,116,000, or 9.3 percent. The rate of growth of some of the age groups was substantially greater, however, particularly the younger age groups and the elderly. For example, children 5 to 9 years

old increased by about 30 percent or more than three times the average for all ages, and those 10 to 14 years gained approximately 20 percent during this period. The number of persons 65 years and over increased by about 2 million, or 16 percent. Changes in the population including Armed Forces overseas since April 1950, by broad age groups, are given in the table below. Data for July 1, 1945, are also shown for comparative purposes.

The effect of the rapid growth of the population of elementary school age is generally well known throughout the country. Of considerable importance, moreover, is the fact that there are well over 18 million children of pre-school age (under 5 years)--one-eighth more than in 1950. Most of these children will be entering school during the next five years, and they will add considerably to the problems already facing many school administrators and local boards of education. (A considerably smaller number of children will be leaving school by dropout or graduation over this period.)

Age	Population including Armed Forces overseas			Change, April 1950 to July 1955	
	July 1955	April 1950	July 1, 1945	Number	Percent
All ages.....	165,248,000	151,132,000	139,928,000	+14,116,000	+9.3
Under 5 years.....	18,305,000	16,164,000	12,979,000	+2,141,000	+13.2
5 to 13 years.....	28,096,000	22,154,000	19,381,000	+5,942,000	+26.8
14 to 17 years.....	9,238,000	8,435,000	9,133,000	+803,000	+9.5
18 to 24 years.....	15,106,000	16,081,000	16,790,000	-976,000	-6.1
25 to 44 years.....	46,946,000	45,385,000	42,521,000	+1,561,000	+3.4
45 to 64 years.....	33,429,000	30,720,000	28,630,000	+2,709,000	+8.8
65 years and over.....	14,128,000	12,195,000	10,494,000	+1,933,000	+15.9

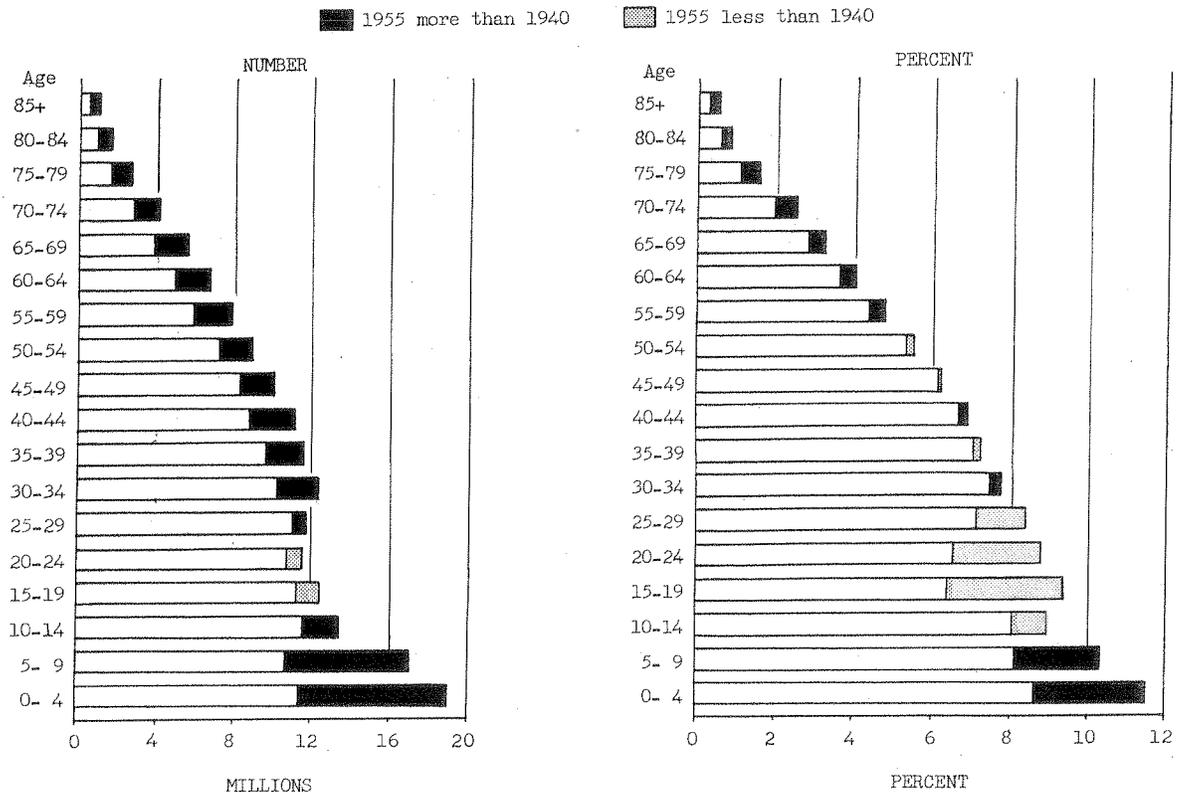

Persons of high school age (14 to 17 years) showed moderate increases while the college age population (18 to 24 years) declined between 1950 and 1955. The 14-to-17-year age group increased by about 800,000, or 9.5 percent, since 1950, and it is anticipated that this group will continue to grow at a fairly rapid pace for some years to come. The college age group, on the other hand, is expected to show only very slight increases for the next several years. After 1960 this group will begin to grow more rapidly, as the larger number of persons born during the war and postwar years replaces the smaller number born in the middle and latter half of the 1930 decade.

The population 65 years and over continued to show rapid gains, increasing by about 1.9 million between 1950 and 1955. There were about 14.1 million persons in this group on July 1, 1955. In comparison, there were 12.2 million in 1950 and about 9.0 million in 1940. The population 65 years and over has grown persistently and quite rapidly since at least 1870 when it was first classified separately in the census. At the beginning of this century they numbered about 3 million. Since

1920, this age group has increased by about 3 percent each decade, or approximately at an average rate of 3 percent a year. The rate of increase in the proportion of the population aged 65 and over has also been quite high. The 1955 proportion (8.6 percent) is more than twice that of 1900. Thus, in 1955 about 1 in every 12 persons in the population was 65 years old or over, as compared with 1 in every 15 in 1940, and only 1 in every 25 at the beginning of this century.

Since 1940 some notable changes have occurred in the distribution of the population, by age. The figure below shows the distribution of population for 1940 and 1955 (numerically and by percentages) and illustrates some of the more important shifts that have taken place. It clearly indicates, for example, the increased proportions of children under 10 and of persons in the oldest age groups, such as 65 years and over, compared with persons of working age. Also, compared to 1940, there are "deficits" in some of the more important age groups, viz., 15 to 19 years and 20 to 24 years. These groups normally provide the bulk of new recruits for the labor force and for the Armed Forces.

DISTRIBUTION OF THE POPULATION OF THE UNITED STATES, BY AGE: 1955 AND 1940

An important feature of the recent population change is, that in spite of substantial increases in the older age groups, the historical increase in the median age has been at least temporarily checked by the continued high level of the birth rate. The table below shows the median age at each census date since 1900 and for July 1, 1955:

Year	Median age (years)
1900.....	22.9
1910.....	24.1
1920.....	25.3
1930.....	26.5
1940.....	29.0
1950.....	30.2
1955.....	30.1

Sex composition.—Although there was only a slight change in the sex ratio (the number of males per 100 females) between 1950 and 1955 (from 99.2 to 98.5), the figures indicate a continuation of the long-term decline in the ratio from its high of 106.0 in 1910. Each census since 1910 has shown a decline in the sex ratio; and, in 1950, for the first time, the census showed more females than males in our population. At that time there were about 600,000 more women than men (including the Armed Forces overseas). By 1955, the excess of females had doubled, and now females outnumber men by about 1.2 million.

The sex ratio for each census since 1900 and for July 1, 1955, is as follows:

Year	Males per 100 females
1900.....	104.4
1910.....	106.0
1920.....	104.0
1930.....	102.5
1940.....	100.7
1950 ¹	99.2
1955 ¹	98.5

¹ Includes Armed Forces overseas.

The long-term decline in the sex ratio is due, primarily, to two factors: (1) More favorable mortality among females than males (there were, for example, about 200,000 more deaths among males for each of the past five years) and (2) the decline in immigration since immigrants traditionally were preponderantly males prior to 1930. (During the early part of this century, immigration averaged about 800,000 a year, compared with 100,000 during the 1940's and 200,000 in the

1950's.) Furthermore, there have been declines in the sex ratio of immigrants since 1930. (Whereas prior to 1930 almost two-thirds of all immigrants were males, in more recent years about three-fifths of them were women.)

Not all age groups showed declines in the sex ratio between 1950 and 1955; some of them, particularly in the younger ages, registered slight increases. The sex ratios by broad age groups for 1950 and 1955 are as follows:

Age	July 1, 1955	April 1, 1950
All ages.....	98.5	99.2
Under 18 years.....	103.9	103.4
18 to 24 years.....	101.2	99.2
25 to 44 years.....	96.5	97.1
45 to 64 years.....	96.7	100.0
65 years and over.....	86.7	89.7

Color composition.—On July 1, 1955, the nonwhite population numbered about 17,810,000, as compared with 15,789,000 on April 1, 1950, a gain of 2,021,000, or 12.8 percent of the 1950 figure. Thus, between 1950 and 1955, the nonwhite population grew at a somewhat higher rate than the white population, which increased by about 9.0 percent. Accordingly, during this period, the proportion of nonwhites in the total population increased slightly, from 10.4 percent in 1950 to 10.8 percent in 1955. Since 1920, the proportion of nonwhite has changed very little; it was 10.3 in 1920 and 10.2 in both 1930 and 1940. At the beginning of the century, however, the nonwhites constituted 12.1 percent of the population.

By age, there were substantial differentials in the rates of growth for the white and nonwhite population. The rate of growth in the number of nonwhite children under 5 years of age, for example, was twice that of the white population (23.7 percent vs. 11.8 percent); the 5-to-9-year nonwhite group grew at a rate about one-third greater than the corresponding white population (37.3 vs. 28.9). As a result of this exceedingly high rate of growth of children at the younger ages, the median age of the nonwhite population reversed its long-term upward trend, declining from 26.1 years in 1950 to 24.7 in 1955. The median age of the white population remained relatively unchanged during this period and stood at 30.7 years in 1955.

The sex ratio for the white and nonwhite population is also appreciably different for

many age groups as is shown by the following table for July 1, 1955:

Age	White	Nonwhite
All ages.....	98.8	95.7
Under 18 years.....	104.4	100.4
18 to 24 years.....	101.9	96.5
25 to 44 years.....	97.5	88.7
45 to 64 years.....	96.6	96.8
65 years and over.....	86.1	94.2

Civilian population.--Between April 1950 and July 1955, the civilian population increased from 149.6 million to 162.3, or by about 8.4 percent. Changes in the civilian population for the age groups 15 to 44 years are as follows:

Age	Change, April 1950 to July 1955	
	Number	Percent
15 to 44 years.....	-290,000	-0.4
15 to 19 years.....	+350,000	+3.4
20 to 24 years.....	-1,957,000	-17.6
25 to 29 years.....	-702,000	-5.8
30 to 34 years.....	+784,000	+6.9
35 to 39 years.....	+264,000	+2.4
40 to 44 years.....	+970,000	+9.5

Changes in the population for age groups under 15 years and 45 years and over were, of course, virtually the same as those shown for the population including Armed Forces overseas. The substantial decline in the 20-to-24 age group reflects primarily the expansion of our Armed Forces in 1950 and 1951.

METHOD AND SOURCES

The estimates shown in this report are based on statistics from the 1950 Census of Population; statistics and estimates of births and deaths provided by the National Office of Vital Statistics, United States Public Health Service; statistics on the movement of civilian citizens and aliens to and from continental United States provided by the Immigration and Naturalization Service, Department of Justice, supplemented by data provided by the Territory of Hawaii and the Commonwealth of Puerto Rico; and data on the size and distribution of the Armed Forces obtained from the Department of Defense.

The estimates of the number of persons in an age group on July 1, 1955, given in

table 1, were obtained by adding to the number of persons in the corresponding group 5 $\frac{1}{4}$ years younger on April 1, 1950 (or to births since April 1950), an estimate of the net change arising from deaths and migration during the period following the census. For this purpose, the population enumerated as of April 1, 1950, was adjusted to include an estimate of persons serving in the Armed Forces of the United States overseas on that date. The estimates of the civilian population in a given age group shown in table 2 were obtained by subtracting an estimate of the total Armed Forces in that age group (both at home and abroad) from the figures in table 1. Similarly, the estimates of the resident population shown in table 3 were obtained by subtracting the number serving in the Armed Forces abroad at each estimate date from the figures in table 1.

In the United States, as well as in many other countries, there has been a tendency for the census count to understate the number of children under 2 years of age to a greater extent than the number at the adjacent higher ages. On the basis of estimates of the number of children under 5 years of age for April 1, 1950, derived from statistics of births, deaths, and migration, it is estimated that the 1950 Census count understated the number of children under 2 years of age by about 638,000, or 9.0 percent, and of the children 2 to 4 years of age by about 164,000, or 1.6 percent. (Some of the understatement is accounted for by misreporting of age.) If the census count under 2 years of age were used as part of the base for an estimate, for example, of children 2 to 4 years of age on April 1, 1953, the change from 1950 to 1953 in the number in the age group 2 to 4 years would reflect the difference of 474,000 (that is, 638,000 minus 164,000) in the net undercounts for the two age groups in 1950. Therefore, in preparing the estimates shown in this report, the 1950 figures for single years under age 5 used as a base were estimates derived from births, not the census counts. At the same time, in order to maintain comparability with the 1950 Census figures, in the sense that the net change for a given age group between the census date and the estimate date would not include the net census undercount, the estimates of the "true" total number of children under 5 years of age, based on births, were deflated by the net census undercounts in the same age group. The last lines of table 1 show the estimates for the age groups under 1 year, 1 and 2 years, and 3 and 4 years, before deflation.

By the same procedure as described above, it was also possible to estimate the net undercounts (including misstatements of age) of children 5 to 14 years of age. However, since the adjustment for this age group would be somewhat smaller than that for children under 5 and also seemed less reliable, it was considered desirable to retain the original census figures as a base and make the adjustment only for children under 5 years. The actual estimates of the net census undercounts for these age groups by sex, as a percent of the estimated population, are as follows:

Sex	5 to 9 years	10 to 14 years
Total.....	3.6	1.8
Male.....	4.0	1.7
Female.....	3.3	1.8

Census counts for other age groups also reflect some net under- or overcount. This situation seems to be particularly true of the age group 65 to 69, especially among the nonwhite population. The relatively large number reported for this age group interrupts a rather smooth decline in the size of successive age groups up the age scale. Consequently, the figures for the 5-year age groups in the span 55 to 69 years for nonwhites were adjusted in order to assure a regular decline throughout

the entire age span. The adjustments were obtained from expected ratios of the nonwhite to white population at ages 60 and over and 65 and over derived by interpolation between the observed ratios for the several adjoining cumulated age groups. This procedure involves the assumption that the ratios of nonwhite to white population should progress fairly smoothly by age; and the use of cumulated totals ensures that the resulting adjustments add to zero. A full description of the technique is given on pp. 111 and 112 of Sixteenth Census of the United States: 1940, United States Life Tables and Actuarial Tables, 1939-1941, prepared by Thomas N. E. Greville. The number as reported in the census and the "smoothed" data for the nonwhite population are as follows:

Age	Reported data		Smoothed data	
	Male	Female	Male	Female
55 to 69 years...	689,000	674,000	689,000	674,000
55 to 59 years.....	279,000	260,000	290,000	285,000
60 to 64 years.....	208,000	198,000	227,000	219,000
65 to 69 years.....	202,000	216,000	172,000	170,000

Estimates of the population of the United States for July 1 of each year 1900 to 1950, comparable to the data shown here, are given in Nos. 98 and 114 of this series.

LIST OF TABLES

Table	Page
1.--Estimates of the total population of continental United States including Armed Forces overseas, by age, color, and sex: July 1, 1950 to 1955, with comparative figures for April 1, 1950.....	6
2.--Estimates of the civilian population of continental United States, by age, color, and sex: April 1, 1950, and July 1, 1950 to 1955.....	9

Table 1.--ESTIMATES OF THE TOTAL POPULATION OF THE UNITED STATES INCLUDING ARMED FORCES OVERSEAS, BY AGE, COLOR, AND SEX:
JULY 1, 1950 TO 1955, WITH COMPARATIVE FIGURES FOR APRIL 1, 1950--Con.

(Estimates based on adjusted 1950 Census age data; see text for detailed explanation. Figures represent the sum of the total population residing in continental United States and Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sum of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 1.--ESTIMATES OF THE TOTAL POPULATION OF THE UNITED STATES INCLUDING ARMED FORCES OVERSEAS, BY AGE, COLOR, AND SEX:
JULY 1, 1950 TO 1955, WITH COMPARATIVE FIGURES FOR APRIL 1, 1950--Con.

(Estimates based on adjusted 1950 Census age data; see text for detailed explanation. Figures represent the sum of the total population residing in continental United States and Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sum of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 1.--ESTIMATES OF THE TOTAL POPULATION OF THE UNITED STATES INCLUDING ARMED FORCES OVERSEAS, BY AGE, COLOR, AND SEX:
JULY 1, 1950 TO 1955, WITH COMPARATIVE FIGURES FOR APRIL 1, 1950--Con.

(Estimates based on adjusted 1950 Census age data; see text for detailed explanation. Figures represent the sum of the total population residing in continental United States and Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sum of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 2.--ESTIMATES OF THE CIVILIAN POPULATION OF CONTINENTAL UNITED STATES, BY AGE, COLOR, AND SEX: APRIL 1, 1950, AND JULY 1, 1950 TO 1955--Con.

(Estimates based on adjusted 1950 Census age data; see text for detailed explanation. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sum of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

¹ Figures for "Nonwhite" and "All classes" adjusted for age biases in nonwhite population as enumerated. See text for explanation.

Table 3.--ESTIMATES OF THE TOTAL POPULATION RESIDING IN CONTINENTAL UNITED STATES (EXCLUDING ARMED FORCES OVERSEAS), BY AGE, COLOR, AND SEX: APRIL 1, 1950, AND JULY 1, 1950 TO 1954

(Estimates based on adjusted 1950 Census age data; see text for detailed explanation. Figures include persons in the Armed Forces stationed in continental United States and exclude members of the Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sum of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers. Data for July 1, 1955, are not available at present)

Table 3.--ESTIMATES OF THE TOTAL POPULATION RESIDING IN CONTINENTAL UNITED STATES (EXCLUDING ARMED FORCES OVERSEAS), BY AGE, COLOR, AND SEX: APRIL 1, 1950, AND JULY 1, 1950 TO 1954--Con.

(Estimates based on adjusted 1950 Census age data; see text for detailed explanation. Figures include persons in the Armed Forces stationed in continental United States and exclude members of the Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sum of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers. Data for July 1, 1955, are not available at present)
