Washington 25, D. C.

Series P-25, No. 146

ESTIMATES OF THE POPULATION OF THE UNITED STATES, BY AGE, COLOR, AND SEX JULY 1, 1950 TO 1956

(This report includes provisional estimates for July 1, 1956. The estimates for 1953 to 1955 presented here supersede the corresponding figures published in Current Population Reports, Series P-25, No. 121. The figures for 1950 to 1952 are the same as those previously published in that report. Estimates for July 1 of each year, 1900 to 1949, comparable to the data shown here, are given in Nos. 98 and 114 of this series)

Large increases in the number of children and aged persons, a continuing decline in the proportion of males, and an apparent downturn in the average age of the population are some of the outstanding recent population changes indicated by estimates of the population of the United States, by age, color, and sex, for midyear 1950 to 1956, released today by the Bureau of the Census, Department of Commerce. The figures also show particularly sharp increases in the number of children of elementary school age, higher than average gains for the preschool and high-school age groups, and less than average increases in the main working ages, for the 1950-56 period. The report presents figures for (1) the population of the United States including Armed Forces overseas,

(2) the population residing in continental United States (excluding Armed Forces overseas), and (3) the civilian population.

INDICATED CHANGES

Age composition.—Between April 1950, the date of the last census, and July 1, 1956, the total population of the United States including Armed Forces overseas increased by almost 17 million, or 11.2 percent. Primarily because of past fluctuations in the annual numbers of births, however, the growth rates for some of the age groups were quite different from the average for all ages (table A). Children of elementary school age (5 to 13 years) continued to show the most rapid gains, increasing by

Table A.—ESTIMATED POPULATION CHANGES BY AGE: 1950 TO 1956

Age	Population including Armed Forces overseas		Change, April 1950 to July 1956	
	July 1, 1956	April 1, 1950	Number	Percent
All ages.....	168,091,000	151,132,000	+16,960,000	+11.2
Under 5 years.....	18,680,000	16,164,000	+2,517,000	+15.6
5 to 13 years.....	29,213,000	22,180,000	+7,034,000	+31.7
14 to 17 years.....	9,543,000	8,409,000	+1,133,000	+13.5
18 to 24 years.....	15,145,000	16,081,000	-936,000	-5.8
25 to 44 years.....	47,056,000	45,385,000	+1,672,000	+3.7
45 to 64 years.....	34,028,000	30,720,000	+3,308,000	+10.8
65 years and over.....	14,426,000	12,195,000	+2,232,000	+18.3

more than 7 million, or almost 32 percent, during this period. This increase reflects the much larger number of births in the several years just following World War II than in several years just before the war (births during the war years being common to the group at both dates). Within the group 5 to 13 years, the younger children, i.e., those 5 to 9 years, grew at a rate half-again as fast as that for the older children. The 5-to-9-year-olds increased by 37 percent between 1950 and 1956, compared with 24 percent for those 10 to 13 years old. Even the latter rate, however, was more than twice the average rate for all ages. There were about 29.2 million children of elementary school age in July 1956, compared with 22.2 million in April 1950.

Persons of high school age (14 to 17 years) showed moderate increase between 1950 and 1956 whereas the college age group (18 to 21 years) declined. The 14-to-17-year age group increased by about 1.1 million, or 13.1 percent; it numbered 9.5 million in 1956, compared with 8.4 million in 1950. It is anticipated that this group will grow at an even more rapid pace in the next several years, because of the general increase in the annual number of births during the war and postwar years. The college age group numbered 8.8 million in 1956, as compared with 9.1 million at the beginning of this decade; the decline amounted to about 3.5 percent. Births were low in the middle thirties as compared with the several preceding years. This group has been increasing since about 1954, however. Moreover, it is expected to show slight increases for the remainder of this decade. After 1960 this group will begin to grow more rapidly, as the larger number of persons born during the war and postwar years replaces the smaller number born in the latter part of the 1930 decade and the first part of the 1940 decade, respectively. Persons in the prime military ages (18 to 24 years) also showed declines between 1950 and 1956. This group, too, is expected to increase slowly for the remainder of this decade and then grow rapidly in the 1960's.

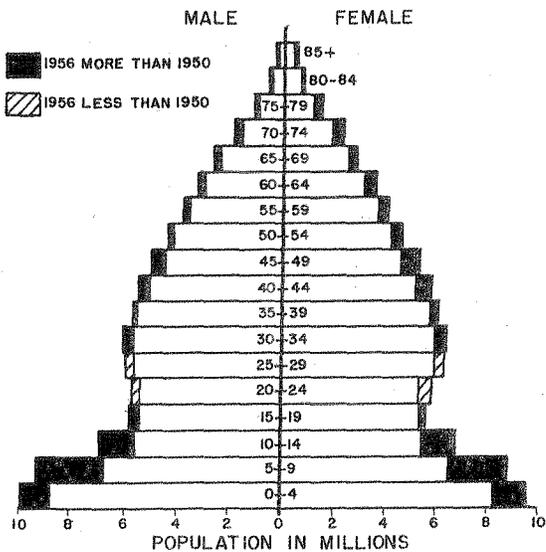

The number of persons in the principal working ages (18 to 64 years) increased from 92.2 million in 1950 to 96.2 million in 1956. The gain of about 4.0 million represents 4.4 percent of the 1950 figure. About four-fifths of the increase occurred among those over 45 years of age; the number of persons 45 to 64 years of age increased by 3,308,000, or 10.8 percent, whereas those 18 to 44 increased only slightly. In this period the 18-to-64 age group as a whole decreased in its proportion

of the total population, from 61 percent in 1950 to slightly more than 57 percent in 1956.

The population 65 years and over continued to show rapid gains, increasing by about 2.2 million between 1950 and 1956. There were about 14.4 million persons in this age group on July 1, 1956; in contrast, there were only 12.2 million in 1950 and fewer than 9 million in 1940. Thus, in 1956 about 1 in every 12 persons in our population was 65 years old or older, as compared with 1 in every 15 in 1940. At the beginning of this century, only 1 in every 25 persons was 65 or over.

Changes in the age-sex structure of the population between 1950 and 1956 are illustrated in the chart below, which shows the distribution of the population by age and sex for these years.

FIGURE A.-DISTRIBUTION BY AGE AND SEX OF THE POPULATION OF THE UNITED STATES INCLUDING ARMED FORCES OVERSEAS: 1956 AND 1950

Other important changes in the population during this period are the shifts in the annual number of persons reaching certain important "threshold" ages. Thus, the annual number of children becoming old enough to enter the first grade in school (reaching age 6) increased from 2.7 million in the year beginning July 1, 1950, to about 3.5 million in the year beginning July 1, 1955. On the average, about 3.3 million children annually became old enough to enter the first grade in school between 1950 and 1956. In comparison, during the 1940's only about 2.2 million reached age 6 each year

on the average. Also, between 1950 and 1956, approximately 2.2 million persons reached age 21 annually, thus becoming old enough to vote for the first time. (In two States, age 18 is

now the minimum voting age.) Estimates of the number of persons reaching various threshold ages each year between 1950 and 1956 are given in table B.

Table B.--NUMBER OF PERSONS REACHING SELECTED AGES: 1950 TO 1956

Year	6 years	14 years	18 years	21 years	65 years
1950-51.....	2,724,000	2,161,000	2,087,000	2,267,000	1,119,000
1951-52.....	2,751,000	2,253,000	2,065,000	2,243,000	1,133,000

ANNUAL AVERAGE					
1950 to 1956.....	3,310,000	2,324,000	2,150,000	2,177,000	1,165,000
1940 to 1950.....	2,244,000	2,262,000	2,364,000	2,378,000	966,000

Trend in the median age.--A notable feature of recent population changes is the apparent reversal in the historical increase of the median age of the population. The median age has increased during each intercensal period as far back as 1800. At the beginning of this century, the median age stood at 22.9 years; by 1950 it had increased by more than 7 years to 30.2 years. However, as a result of the continued high level of the birth rate since the end of World War II, and in spite of the sizable increase in the aged population in this period, the median age has recently shown a slight decline. The figure was 29.9 years in 1956. Table C below shows the median age at each census date since 1900 and for July 1, 1956:

Table C.--MEDIAN AGE OF THE POPULATION: 1900 TO 1956

Year	Age (years)
1900.....	22.9
1910.....	24.1
1920.....	25.3
1930.....	26.5
1940.....	29.0
1950.....	30.2
1956.....	29.9

Sex composition.--Between 1950 and 1956, the sex ratio (the number of males per 100 females) declined slightly. The drop from 99.2 to 98.4 in this period continued the long-term decline in the ratio from its high of 106.0 in 1910. Each census since 1910 has shown a

decline in the sex ratio, but not until the 1950 Census were more females counted than males. In that year women appear to have outnumbered men by about 600,000 (including Armed Forces overseas). By 1956, women outnumbered men by about 1.4 million.

The sex ratio for each census date since 1900 and for July 1, 1956, is given in table D.

Table D.--SEX RATIO OF THE POPULATION: 1900 TO 1956

Year	Males per 100 females
1900.....	104.4
1910.....	106.0
1920.....	104.0
1930.....	102.5
1940.....	100.7
1950 ¹	99.2
1956 ¹	98.4

¹ Includes Armed Forces overseas.

The long-term decline in the sex ratio is due, primarily, to two factors. The first factor is the more favorable mortality among females than males. There were, for example, about 200,000 more deaths among males than among females for each of the past six years. The second factor is the decline in immigration, in combination with the fact that immigration was preponderantly male prior to 1930. During the first decade or so of this century, immigration averaged about 800,000 a year, compared with 100,000 during the 1940's and 200,000 in the 1950's. Furthermore, there has been a decline in the sex ratio of immigrants since

1930. Whereas prior to 1930 almost two-thirds of all immigrants were males, in more recent years about two-fifths of them were males.

Considered in terms of broad age groups, the sex ratio currently varies from 103.9 for the population under 18 years to 85.7 for those 65 years and over. Sex ratios by broad age groups, for 1950 and 1956, are given in table E.

Table E.--SEX RATIOS BY AGE: 1950 TO 1956

Age	July 1, 1956	April 1, 1950
All ages.....	98.4	99.2
Under 18 years.....	103.9	103.4
18 to 24 years.....	101.3	99.2
25 to 44 years.....	96.6	97.1
45 to 64 years.....	96.1	100.0
65 years and over.....	85.7	89.7

Color composition.--On July 1, 1956, the nonwhite population numbered about 18,268,000, as compared with 15,789,000 on April 1, 1950. These figures indicate a gain of 2,479,000, or 15.7 percent, over the 1950 figure. In general, the nonwhite population has grown at a somewhat higher rate than the white population. The white population increased by 10.7 percent between 1950 and 1956. This difference arises from the marked excess of the birth rate of nonwhites, which is only partially offset by a higher death rate. The proportion of nonwhites in the population increased between 1950 and 1956, from 10.4 percent to 10.9 percent. In 1940, the proportion nonwhite was 10.2 percent. At the beginning of this century, however, nonwhites constituted 12.1 percent of the population.

Table F shows rates of change between 1950 and 1956 for the white and nonwhite populations, by broad age groups.

Table F.--CHANGES IN THE POPULATION INCLUDING ARMED FORCES OVERSEAS, BY COLOR: 1950 TO 1956

Age	White			Nonwhite		
	July 1, 1956	April 1, 1950	Percent change	July 1, 1956	April 1, 1950	Percent change

POPULATION RESIDING IN CONTINENTAL UNITED STATES AND THE CIVILIAN POPULATION

Between April 1950 and July 1956, the total population residing in continental United States increased from 150.7 million to 167.2 million, or by 10.9 percent. The civilian population increased from 149.6 million to 165.3 million, or by 10.4 percent, during this same period. Changes in the resident and civilian

population for the age groups 15 to 44 years, in comparison with those for the population including Armed Forces overseas, are shown in table G. Changes in the age groups under 15 years of age and 45 years and over were, of course, the same or nearly the same for all three types of population. The sharp decline in the civilian population in the 20-to-24-year age group reflects primarily the expansion of our Armed Forces in 1950 and 1951.

Table G.--POPULATION CHANGE: 1950 TO 1956

Age	Population including Armed Forces overseas		Resident population		Civilian population	
	Number	Percent	Number	Percent	Number	Percent

METHOD AND SOURCE

The estimates shown in this report are based on statistics from the 1950 Census of Population; statistics and estimates of births and deaths provided by the National Office of Vital Statistics, United States Public Health Service; statistics on the movement of civilian citizens and aliens to and from continental United States provided by the Immigration and Naturalization Service, Department of Justice, supplemented by data provided by the governments of the Territory of Hawaii and the Commonwealth of Puerto Rico; and data on the size and distribution of the Armed Forces obtained from the Department of Defense.

The postcensal estimates of the number of persons in an age group on July 1, 1956, given in table 1 (population including Armed Forces overseas), were obtained by subtracting from the number of persons in the corresponding group 6 1/2 years younger on April 1, 1950 (or from births since April 1950), an estimate of deaths during the period following the census, and adding or subtracting, as required, an estimate of migration across our national borders. For this purpose, the population enumerated as of April 1, 1950, was adjusted to include an estimate of persons serving in the Armed Forces of the United States overseas on that date. The postcensal estimates of the resident population in a given age group shown in table 2 were obtained by subtracting an estimate of the number of persons serving in the Armed Forces abroad in that age group on each estimate date from the figures in table 1. Similarly, the estimates of the civilian population shown in table 3 were obtained by subtracting the total number serving in the Armed Forces (both at home and abroad) at each estimate date from the figures in table 1.

In the United States, as well as in many other countries, there has been a tendency for the census count to understate the number of young children to a greater extent than the number at the adjacent higher ages. On the basis of estimates of the number of children under 5 years of age for April 1, 1950, derived from statistics of births, deaths, and migration, it is estimated that the 1950 Census count understated the number of children in this age group by about 802,000, or 4.7 percent. (Some of the understatement is accounted for by misreporting of age.) The net undercount for ages under 2 years is estimated to be much greater than for ages 2 to 4 years, however. The understatement amounted

to 638,000, or 9.0 percent, for the former group and 164,000, or 1.6 percent, for the latter group (of which about 130,000 relates to ages 2 and 3). The differences in net undercounts by age introduce a problem of comparability in postcensal estimates based directly on the census figures as enumerated. If, for example, the census count under 2 years of age were used as the base for an estimate of children 2 and 3 years of age on April 1, 1952, the change from 1950 to 1952 in the number in the age group 2 and 3 years would reflect the difference of 508,000 in the net undercounts for the two age groups in 1950 (that is, 638,000 minus 130,000). Therefore, in preparing the estimates shown in this report, the 1950 figures for single years under age 5 used as a base were estimates derived from births, not the census counts. At the same time, in order to maintain comparability with the 1950 Census figures, in the sense that the increase or decrease for a given age group between the census date and the estimate date would not include the net census undercount, the estimates of the "true" total number of children under 5 years of age, based on births, were deflated by the net census undercounts in the same age group. The last lines of table 1 show the estimates for the age groups under 1 year, 1 and 2 years, and 3 and 4 years, before deflation.

By the use of birth, death, and migration statistics, it was also possible to estimate the net undercounts (including misstatements of age) of children 5 to 14 years of age. However, since the adjustment for this age group would be somewhat smaller than that for children under 5 and also seemed less reliable, it was considered desirable to retain the original census figures as a base and make the adjustment only for children under 5 years. The actual estimates of the net census undercounts for these age groups by sex, as a percent of the estimated population, are as follows:

Sex	5 to 9 years	10 to 14 years
Total.....	3.6	1.8
Male.....	4.0	1.7
Female.....	3.3	1.8

Census counts for other age groups also reflect some net under- or overcount. This situation seems to be particularly true of the age group 65 to 69, especially among the non-white population. The relatively large number

reported for this age group interrupts a rather smooth decline in the size of successive age groups up the age scale. In order to assure a regular decline throughout the entire age span 55 to 69 years for nonwhites, the figures as enumerated for the 5-year age groups in this span were adjusted mathematically. The absolute adjustments were obtained by use of the observed ratios of the nonwhite to the white population at ages 55 and over and 70 and over and adjusted ratios at ages 60 and over and 65 and over. The adjusted ratios were derived by interpolation between the observed ratios for the several adjoining cumulated age groups. This procedure involves the assumption that the ratio of the nonwhite to the white population should progress fairly smoothly by age; and the use of cumulated totals ensures that

the resulting adjustments add to zero for ages 55 and over.¹ The numbers as reported in the census and the adjusted numbers for the nonwhite population are as follows:

Age	Reported data		Adjusted data	
	Male	Female	Male	Female
55 to 69 years...	689,000	674,000	689,000	674,000
55 to 59 years.....	279,000	260,000	290,000	285,000
60 to 64 years.....	208,000	198,000	227,000	219,000
65 to 69 years.....	202,000	216,000	172,000	170,000

¹ A fuller description of the technique is given on pp. 111 and 112 of U. S. Bureau of the Census, United States Life Tables and Actuarial Tables, 1939-1941, by Thomas N. E. Greville.

Table 1.--ESTIMATES OF THE TOTAL POPULATION OF THE UNITED STATES INCLUDING ARMED FORCES OVERSEAS, BY AGE, COLOR, AND SEX:
JULY 1, 1950 TO 1956, WITH COMPARATIVE FIGURES FOR APRIL 1, 1950--Con.

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Figures represent the sum of the total population residing in continental United States and Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 1.--ESTIMATES OF THE TOTAL POPULATION OF THE UNITED STATES INCLUDING ARMED FORCES OVERSEAS, BY AGE, COLOR, AND SEX:
JULY 1, 1950 TO 1956, WITH COMPARATIVE FIGURES FOR APRIL 1, 1950--Con.

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Figures represent the sum of the total population residing in continental United States and Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 1.--ESTIMATES OF THE TOTAL POPULATION OF THE UNITED STATES INCLUDING ARMED FORCES OVERSEAS, BY AGE, COLOR, AND SEX:
JULY 1, 1950 TO 1956, WITH COMPARATIVE FIGURES FOR APRIL 1, 1950--Con.

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Figures represent the sum of the total population residing in continental United States and Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

¹ Figures for "Nonwhite" and "All classes" adjusted for the misreporting of age of nonwhite persons in the census; see text for explanation.

Table 2.--ESTIMATES OF THE TOTAL POPULATION RESIDING IN CONTINENTAL UNITED STATES (EXCLUDING ARMED FORCES OVERSEAS), BY AGE, COLOR, AND SEX:
APRIL 1, 1950, AND JULY 1, 1950 TO 1956

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Figures include persons in the Armed Forces stationed in continental United States and exclude members of the Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Age and date	All classes			White			Nonwhite		
	Total	Male	Female	Total	Male	Female	Total	Male	Female

Table 2.--ESTIMATES OF THE TOTAL POPULATION RESIDING IN CONTINENTAL UNITED STATES (EXCLUDING ARMED FORCES OVERSEAS), BY AGE, COLOR, AND SEX:
APRIL 1, 1950, AND JULY 1, 1950 TO 1956--Con.

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Figures include persons in the Armed Forces stationed in continental United States and exclude members of the Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 2.--ESTIMATES OF THE TOTAL POPULATION RESIDING IN CONTINENTAL UNITED STATES (EXCLUDING ARMED FORCES OVERSEAS), BY AGE, COLOR, AND SEX:
APRIL 1, 1950, AND JULY 1, 1950 TO 1956--Con.

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Figures include persons in the Armed Forces stationed in continental United States and exclude members of the Armed Forces overseas. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 3.—ESTIMATES OF THE CIVILIAN POPULATION OF CONTINENTAL UNITED STATES, BY AGE, COLOR, AND SEX: APRIL 1, 1950, AND JULY 1, 1950 TO 1956—Con.

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)

Table 3.--ESTIMATES OF THE CIVILIAN POPULATION OF CONTINENTAL UNITED STATES, BY AGE, COLOR, AND SEX: APRIL 1, 1950, AND JULY 1, 1950 to 1956--Con.

(Estimates are based on adjusted 1950 Census age data; see text for detailed explanation. Each population estimate has been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ slightly from the totals shown. Medians are based on unrounded absolute numbers)
