

# CURRENT POPULATION REPORTS

## POPULATION ESTIMATES

May 21, 1963

Washington 25, D.C.

Series P-25, No. 265

### ESTIMATES OF THE POPULATION OF THE UNITED STATES, BY AGE, COLOR, AND SEX: JULY 1, 1950 TO 1962

(The estimates for 1960 and 1961 supersede those published in Current Population Reports, Series P-25, No. 246. Those for 1950 to 1959 supersede the postcensal estimates published in Nos. 146, 170, 193, and 212. All the figures shown here are consistent with the estimates of the components of population change for the United States shown in Current Population Reports, Series P-25, No. 250)

This report presents postcensal estimates of the population of the United States by age, color, and sex for July 1, 1960 to 1962. Included in an appendix are preliminary intercensal estimates of the population of conterminous United States (excluding Alaska and Hawaii) by age, color and sex, for July 1, 1950 to 1959.

Estimates are presented according to three definitions of the population--total including Armed Forces abroad, total resident, and civilian resident. Figures corresponding to these three definitions for the census dates, April 1, 1960, and April 1, 1950, are also presented. The total resident population conforms to the definition of the United States population for which the principal tabulations are made for the census reports. Thus, it excludes residents of Puerto Rico, residents of other outlying areas under United States sovereignty or jurisdiction, and American citizens living abroad. The "total population including Armed Forces abroad" includes the total resident population and the Armed Forces stationed in foreign countries or in the outlying areas but not their dependents. The "civilian resident population" represents the total resident population less the Armed Forces stationed in the United States.

The estimates for conterminous United States for 1950 to 1959 shown in the appendix exclude Alaska and Hawaii whereas the postcensal estimates for 1960 to 1962 include them.

#### INDICATED CHANGES

Important shifts have occurred over the past dozen years in the age composition of the population of the United States. The preschool and school-age population and the elderly increased substantially,

whereas less than average gains, and in some age groups declines, have occurred in the adult population (table A).

Table A.--CHANGES IN THE POPULATION, BY AGE: 1950 TO 1962

(Numbers in thousands. Total resident population, including Alaska and Hawaii)

Age	July 1, 1962		April 1, 1950		Change, 1950 to 1962	
	Popula- tion	Per- cent	Popula- tion	Per- cent	Number	Per- cent change
All ages.....	185,822	100.0	151,326	100.0	+34,496	+22.8
Under 5 years.....	20,746	11.2	16,243	10.7	+4,503	+27.7
5 to 13 years.....	33,888	18.2	22,281	14.7	+11,607	+52.1
14 to 17 years.....	12,743	6.9	8,443	5.6	+4,300	+50.9
18 to 24 years.....	17,172	9.2	15,926	10.5	+1,246	+7.8
25 to 34 years.....	22,241	12.0	23,878	15.8	-1,637	-6.9
35 to 44 years.....	24,425	13.1	21,535	14.2	+2,890	+13.4
45 to 64 years.....	37,299	20.1	30,724	20.3	+6,574	+21.4
65 years and over....	17,308	9.3	12,295	8.1	+5,013	+40.8

Between April 1950 and July 1962, the population of elementary school ages (5 to 13 years of age) increased by about 12 million and that of high school age (14 to 17 years of age) increased by about 4 million. All told, there were 33.9 million children 5 to 13 years old and 12.7 million 14 to 17 years old in 1962 compared with 22.3 million and 8.4 million, respectively, in 1950. Thus in 1962, there were three children of school age for every two in 1950. The percentage of increase in this age group was more than twice that of the population as a whole. From 1950 to 1962, the total population (including Alaska and Hawaii) increased from 151 million to 186 million, or by 23 percent.

In 1962, there were 20.7 million children under 5 years of age, compared with 16.2 million in 1950, a gain of about 28 percent. The elderly population (those 65 years and over) also grew rapidly during this 12-year period, increasing from 12.3 to 17.3 million, or by 41 percent; and its share of the total population increased from 8.1 to 9.3 percent.

The age groups 18 to 64 years (typically the range from high-school graduation to retirement) have all increased less than the population as a whole, but with considerable variation in rates of change. The resident population 18 to 24 years of age increased by only 8 percent for the 12-year period and that 25 to 34 years of age decreased by 7 percent (from 23.9 million in 1950 to 22.2 million in 1962.) As a consequence, the percentage of the population included in the latter age group dropped from 15.8 to 12.0. Most of the decline in this group has occurred since 1954. The numbers in this group remained virtually unchanged between 1950 and 1954.

The differential rates of growth by age have tended to increase the responsibility of the adult population in terms of the number of dependents. A simple measure of this trend is the dependency ratio. For every 100 persons 18 to 64 years of age in 1962, there were 84 persons under 18 years of age or 65 years old and over. The ratio stood at 64 in 1950 and 60 in 1940. Another consequence of age differentials in population growth is that the average age of the population has been dropping. The median age (the one which divides the population into two equal parts, one-half of the population being older than the median and one-half younger) declined from 30.2 years in 1950 to 28.9 years in 1962, the lowest it has been since 1940 (table B). The median reached peaks of 30.5 years in 1952 and 30.9 in 1945. These peaks were caused mainly by the temporary absence of young men assigned to the Armed Forces abroad.

Table B.--MEDIAN AGE OF THE POPULATION: 1900 TO 1962  
(As of July 1, except as noted. Total resident population)

Year	Age (years)	Year	Age (years)
United States:		Conterminous United States--Con.	
1962.....	28.9	1953.....	30.5
1961.....	29.2	1952.....	30.5
1960 (April 1)....	29.5	1951.....	30.4
Conterminous United States:		1950 (April 1)....	30.2
1959.....	29.7	1940 (April 1)....	29.0
1958.....	29.9	1930 (April 1)....	26.5
1957.....	30.1	1920 (Jan. 1).....	25.3
1956.....	30.3	1910 (April 15)....	24.1
1955.....	30.3	1900 (June 1).....	22.9
1954.....	30.4		

Substantial annual fluctuations have marked the pattern of growth of the population by broad age groups over the last dozen years (table 5). There has been a slowing down in the growth of the population under 5 years old. The group increased by only 86,000 in the

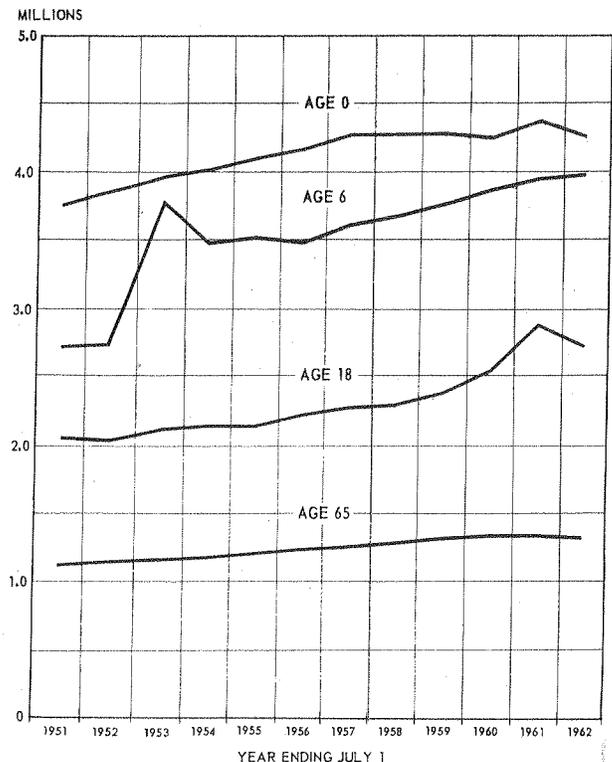

year ending July 1, 1962, as compared with an increase of 296,000 in 1960-61, and an average annual increase of about 358,000 for the entire 12-year period.

The population 5 to 13 years of age increased more than 600,000 in 1961-62, by slightly less than 300,000 in 1960-61, and by about 1.1 million in 1959-60. The largest annual increase in this age group occurred in the year ending July 1, 1952, when the first wave of post-World-War-II births (1946-47) entered the group, replacing those born during the years 1938-39.

The population 18 to 24 years of age lost population in the early part of the 1950 decade up to 1954 but increased annually thereafter to 1962. Between 1950 and 1954, the group lost about 1.5 million persons but then increased by 2.8 million from 1954 to 1962. The age group 25 to 34 years, on the other hand, increased little in the early part of the 1950's and has lost about 1.9 million since 1954.

The population reaching selected ages each year is shown in table C and figure 1. The number of children reaching age 6, when most children enter school, has been 3.5 million or more since 1952-53 and had reached 4.0 million by 1962. Another important age is 18 years, since at that age many young people enter college, become eligible for Selective Service, enter the labor force, or marry. The number reaching 18 averaged 2.2 million in the decade 1950 to 1960, and 2.8 million since then. This group can be expected to

Figure 1.—POPULATION REACHING SELECTED AGES:  
1951 TO 1962

increase sharply in 1965 and to remain at a high plateau as the babies born during the high birth years of 1946-47 and later reach this age.

Recent revisions in the Social Security law now permit many people to retire at age 62. About 1½ million persons currently reach age 62 each year.

Table C.--NUMBER OF PERSONS REACHING SELECTED AGES: 1951 TO 1962  
(In thousands. Total resident population. Excludes Hawaii before 1960 and Alaska before 1959)

Year (Ending July 1)	0 years (births)	6 years	14 years	18 years	21 years	62 years	65 years

1951.....	3,753	2,717	2,158	2,065	2,177	1,255	1,121
ANNUAL AVERAGE							
1960 to 1962...	4,315	3,970	3,606	2,824	2,283	1,475	1,336
1950 to 1960...	4,089	3,462	2,487	2,235	2,056	1,347	1,225

The excess of females over males in the population continues to increase. For every 100 females there were, in the resident population in 1962, 96.7 males, as compared with 97.1 in 1960 and 98.6 in 1950 (table D). If Armed Forces abroad are included, the sex ratio in 1962 is 97.5, and women outnumber men by 2.4 million. The ratio of males to females has been declining for the past 50 years, reflecting the more rapid growth of the female population, the result of the greater increase in the life span among women than among men and of the passing of a generation of immigrants, among whom males predominated. The sex ratio in the older ages is also declining as a consequence. Under age 45, however, little change is occurring in the ratio. Overall in 1962, women outnumbered men by 3.1 million (excluding Armed Forces abroad).

Table D.--SEX RATIO OF THE POPULATION, BY AGE: 1900 TO 1962  
(As of July 1, except as noted. Males per 100 females.  
Total resident population)

Year	All ages	Under 15 years	15 to 24 years	25 to 44 years	45 to 64 years	65 and over
United States:						
1962.....	96.7	103.5	98.4	95.6	94.8	80.6
1960 (April 1).....	97.1	103.4	98.3	95.7	95.7	82.8
Continental United States:						
1958.....	97.2	103.5	97.3	95.5	96.2	84.4
1956.....	97.3	103.5	96.0	95.4	97.0	86.2
1954.....	97.2	103.5	93.7	95.1	97.9	87.6
1952.....	97.4	103.6	93.1	95.2	98.9	88.7
1950 (April 1).....	98.6	103.7	97.6	96.4	100.0	89.7
1940 (April 1).....	100.7	103.0	98.5	98.5	105.2	95.5
1930 (April 1).....	102.5	102.6	97.9	101.8	109.1	100.5
1920 (Jan. 1).....	104.0	102.1	96.8	105.1	115.2	101.3
1910 (April 15).....	106.0	102.2	101.0	110.2	114.4	101.1
1900 (June 1).....	104.4	102.1	98.1	108.8	110.7	102.0

Because of the excess of females at the older ages, their average age is higher. The median age for females in 1962 was 29.9 years as compared with 27.9 years for males, or 2.0 years higher (tables 2 and E). Furthermore, the difference is increasing. In 1950, the difference was only 0.6 years--30.5 years as compared with 29.9 years.

Table E.--MEDIAN AGE, BY COLOR AND SEX: 1950 TO 1962  
(As of July 1, except as noted. Total resident population)

Year	Male		Female

1950 (April 1).....	30.4	25.9	31.1	26.2

The nonwhite population has been growing more rapidly than the white population in recent years. From 1950 to 1962, the nonwhite population grew by 33 percent as compared with 21 percent for the white (table F). The growth differentials are particularly marked for the youngest ages, the consequence of the higher fertility of nonwhites. The nonwhite population

Table F.--CHANGES IN THE WHITE AND NONWHITE POPULATION,  
BY AGE: 1950 TO 1962

(Numbers in thousands. Total resident population, including Alaska and Hawaii)

NONWHITE						
All ages.....	21,594	100.0	16,176	100.0	+5,418	+33.5
Under 5 years.....	3,123	14.5	2,036	12.6	+1,087	+53.4
5 to 13 years.....	4,730	21.9	2,835	17.6	+1,895	+66.8
14 to 17 years.....	1,568	7.3	1,084	6.7	+484	+44.6
18 to 24 years.....	2,079	9.6	1,864	11.5	+215	+11.5
25 to 34 years.....	2,641	12.2	2,549	15.8	+92	+3.6
35 to 44 years.....	2,593	12.0	2,254	13.9	+339	+15.1
45 to 64 years.....	3,535	16.4	2,641	16.3	+894	+33.8
65 years and over....	1,326	6.1	914	5.6	+412	+45.1

under 14 years old increased by 61 percent from 1950 to 1962, as compared with 39 percent for the white population. The proportion nonwhite in the population of all ages increased from 10.7 percent in 1950 to 11.6 percent in 1962.

The nonwhite population is much younger than the white. In 1962, 44 percent of the nonwhite population was under 18 years old and only 23 percent was 45 years old and over, in contrast to 35 percent under 18 years and 30 percent 45 years and over for the whites.

The large number of children makes for a high dependency ratio for the nonwhite population--99 as compared with 82 for the white. This difference in age composition is also reflected in the median age, which was 22.5 years for the nonwhite and 29.8 years for the white population. Since 1950, the median age for nonwhites has declined by 3.5 years compared with a drop of 0.9 years for the white population.

Females outnumber males by a wider margin in the nonwhite than in the white population. Overall, in 1962, there were 94.3 males per 100 females in the nonwhite population compared with a ratio of 97.0 in the white (table G). Only for ages 65 and over was the sex ratio for nonwhites higher than for whites.

Table G.--SEX RATIO OF THE WHITE AND NONWHITE POPULATION,  
BY AGE: 1962

45 to 64 years.....	94.9	94.3
65 years and over.....	80.0	87.2

#### SOURCES AND METHODS

I. Estimates for 1960 to 1962.--The postcensal estimates are based on statistics from the 1960 Census of Population; statistics and estimates of births and deaths provided by the National Vital Statistics Division, National Center for Health Statistics, United States Public Health Service; statistics on the number of immigrant aliens admitted to the United States and citizen arrivals from abroad as reported by the Immigration and Naturalization Service of the Department of Justice, supplemented by data reported by the Government of Puerto Rico; and data on the size and distribution of the Armed Forces obtained from the Statistical Services Center of the Department of Defense and the various branches of service.

The estimates have been made by the component method applied to the total population including Armed Forces abroad as of April 1, 1960. (The base population for April 1960 is the 1960 Census count plus Armed Forces abroad.) This method entails bringing forward the population from the census date to the estimate date by aging the population in proportion to

the length of the estimate period and by assigning births, deaths, and net immigrants during the estimate period to the proper age group. The total resident population has been estimated by subtracting estimates of Armed Forces abroad from the total population including Armed Forces abroad; the civilian resident population has been estimated by subtracting estimates of all Armed Forces (both at home and abroad) of the United States from the total population including Armed Forces abroad.

The statistics on births and deaths are based on tabulations of vital statistics for the resident population by the National Vital Statistics Division of the United States Public Health Service. The estimates employed final tabulations of births and deaths through December 1960 and preliminary tabulations through June 1962. Births were corrected for under-registration by factors determined by extending the results of the Birth Registration Test conducted by the Public Health Service in conjunction with the 1950 Census to subsequent years.<sup>1</sup> No similar registration test was conducted in 1960.

The estimates of net immigration from foreign countries are based on statistics provided by the Immigration and Naturalization Service and by the Planning Board of the Commonwealth of Puerto Rico. Data on net immigration are available only through June 1961; the estimates for the following year are extrapolations. An allowance has been made for those Cuban refugees who have come to the United States but who do not appear in the immigration data because they had not yet been granted permanent status. The age distribution of all classes of migrants was assumed to be the same as that of immigrant aliens, the only arrivals or departures for which actual data are available.

The estimates of the Armed Forces are based on data from the Statistical Service Center of the Department of Defense and from the Army, Navy, Air Force, Marine Corps, and Coast Guard.<sup>2</sup> Reserve forces on a 6-month tour of training and students at the military academies are included in the Armed Forces; reserve forces on short tours of training, national guardsmen, and officers in the Public Health Service are not included. Crews of naval vessels in American ports are considered inside the United States; those in foreign ports or on the high seas are considered abroad.

The population estimates are based on complete-count population figures from the 1960 Census tabulated by age, color, and sex. The age detail from the

<sup>1</sup> U.S. Public Health Service, National Vital Statistics Division (National Office of Vital Statistics), Vital Statistics of the United States: 1950, Vol. I, pp. 108-127; ibid.: 1959, pp. 3-1 and 3-15. The adjustment amounted to 1.1 percent for the year ending June 30, 1962.

<sup>2</sup> Estimates of the size and distribution of the Armed Forces for April 1960 are also available from the 1960 Census of Population. The Department of Defense is used as the source for the estimates here because it provides a consistent series over time required for a continuing program of population estimates.

count is by 5-year age groups for ages under 85 years old and by single years of age for ages under 21 years old.<sup>3</sup> To facilitate the computations, the population for ages 21 to 84 was also distributed by single years. The population 21 to 24 years of age (including Armed Forces abroad) was distributed in proportion to annual births from 1935 to 1939. Since births were much less completely registered in earlier years, births statistics were not used to distribute, by single years, the grouped data beyond age 24. Rather, the 5-year age groups (by color and sex) of the population including Armed Forces abroad were distributed by 5 point polynomial interpolation. This form of interpolation provided a series of figures for single years of age which is consistent with the 5-year age totals and shows a smooth transition from one age group to the next.<sup>4</sup>

Alternatively, in deriving the single years of age for the population 25 years old and over, the counts of population by single years from the 25-percent sample of the 1960 Census could have been used. A close review of the figures, however, indicated that this series does not provide the best basis for population estimates by single years of age. The sample census data by single years for the adult ages show greater fluctuations than would be expected from what is known of the course of births, deaths, and immigration during the early years of the century.

<sup>3</sup> U.S. Bureau of the Census, U.S. Census of Population: 1960, General Population Characteristics, United States Summary, Final Report PC(1)-1B, table 46.

<sup>4</sup> In order to provide a smooth juncture from the single years of age distribution based on births for ages 21 to 24 and those obtained by mathematical interpolation for ages 25 and over, the single years of age for the 25 to 29 year age group were obtained by a weighted-average procedure of the two methods.

The artificial fluctuations in the data on age in the sample of the 1960 Census are believed to have arisen for a number of reasons: (1) errors of knowledge and memory tend to increase with age; (2) digit preference in reporting year of birth (and consequently of age) which, although substantially less than digit preference in reporting age in earlier censuses, still remains a source of consistent bias, particularly for the nonwhite population<sup>5</sup> (3) over-reporting of 1900 as the year of birth, which results in a substantial excess above the expected population at age 59, and (4) sampling error.

Furthermore, the differences in the counts, by 5-year age groups, between the sample and the complete count, particularly for the population 65 years and over, result in discontinuities in the single years of age in going from one 5-year age group to another when the sample counts are adjusted to 5-year totals from the complete count. Table H shows a comparison between the complete counts and the sample counts, by 5-year age groups and color. Figures 2 and 3 show the differences at successive ages (i.e., ages 25 and 26, ages 26 and 27, etc.) for the distribution of the population by single years, white and nonwhite, 25 to 74 years of age, as derived by (a) mathematical interpolation over the 5-year age data based on the complete counts (the base used for these estimates) and, (b) adjusting the data by single years from the sample to the 5-year age total of the complete count. The discontinuity at age 59 is particularly apparent.

<sup>5</sup> For discussions of age heaping in censuses, see U.S. Bureau of the Census, U.S. Census of Population: 1960, Detailed Characteristics, United States Summary, Final Report PC(1)-1D; Robert J. Myers, "Accuracy of Age Reporting in the 1950 U.S. Census," Journal of The American Statistical Association, Vol. 49, No. 268, December 1954; and Age Heaping in the 1960 Census of Population, prepared by Benjamin S. Bradshaw and Donald S. Akers (unpublished Population Division staff paper), January 1963.

Table H.--COMPARISON OF COMPLETE-COUNT AND 25-PERCENT SAMPLE DATA, BY AGE AND COLOR, FOR THE UNITED STATES: 1960 CENSUS.

<sup>1</sup> Less than 0.05 percent.

At the younger ages, on the other hand, i.e. for the population under 21 years, the census counts by single years of age parallel the distribution of births quite closely.

In preparing the population estimates, it was necessary to carry forward the April 1, 1960, population to July 1, 1960, to provide the appropriate base for later years. Because of the sharp fluctuations in the numbers of annual births during the recent past, particularly during and just after World War II, the population under 25 was aged one-quarter of a year from April 1960 to July 1960 on the basis of the monthly births in the appropriate years. For ages 25 years and over, a uniform assumption was made that one-fourth of the population at each age, after allowing for mortality, would move up to the next higher age during this calendar quarter.

The estimates have not otherwise been adjusted for bias in the census enumeration, although it is recognized that there were both underenumeration and

misreporting of age.<sup>6</sup> However, the evaluation work on the 1960 Census is only partially completed, and as yet there is no definitive overall measure of net undercount for the 1960 Census, nor is there any for most of the age groups.<sup>7</sup> Estimates indicate that for children under 5 years of age there was a net undercount of 2.6 percent in the 1960 Census as compared with 4.7 percent in the 1950 Census. For the group 5 to 9 years of age, the corresponding figures are 2.4

<sup>6</sup> U.S. Bureau of the Census, U.S. Census of Population: 1960, Number of Inhabitants, United States Summary, Final Reports PC(1)-1A, pp. X-XII, and Supplementary Reports, PC(S1)-32, "Population of the United States, by Single Years of Age: 1960."

<sup>7</sup> See, for example, Joseph Steinberg, et al., "The Accuracy of the 1960 Census Count," in: American Statistical Association, Proceedings of the Social Statistics Section: 1962, pp. 76-79, Washington, D.C.; and Conrad Taeuber and Morris H. Hansen, "A Preliminary Evaluation of the 1960 Census of Population," paper presented at the annual meetings of the Population Association of America at Philadelphia, April 1963.

Figure 2—DIFFERENCE BETWEEN SUCCESSIVE SINGLE YEARS OF AGE, 25 TO 74, OF THE WHITE POPULATION: 1960

(Single-year-of-age estimates obtained by interpolation in the five-year age groups in the complete count by (1) sample counts, and by (2) mathematical interpolation)

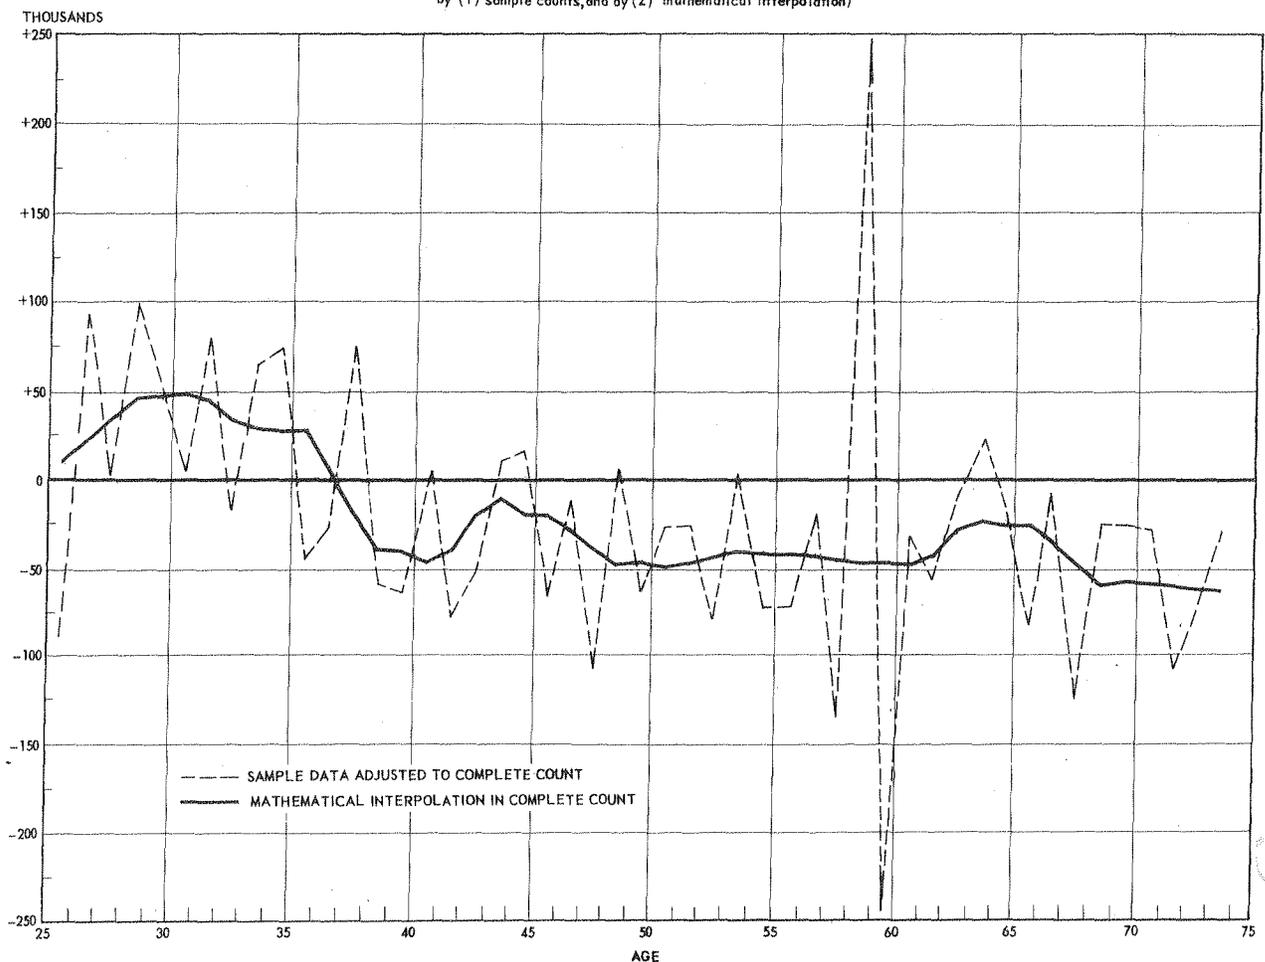

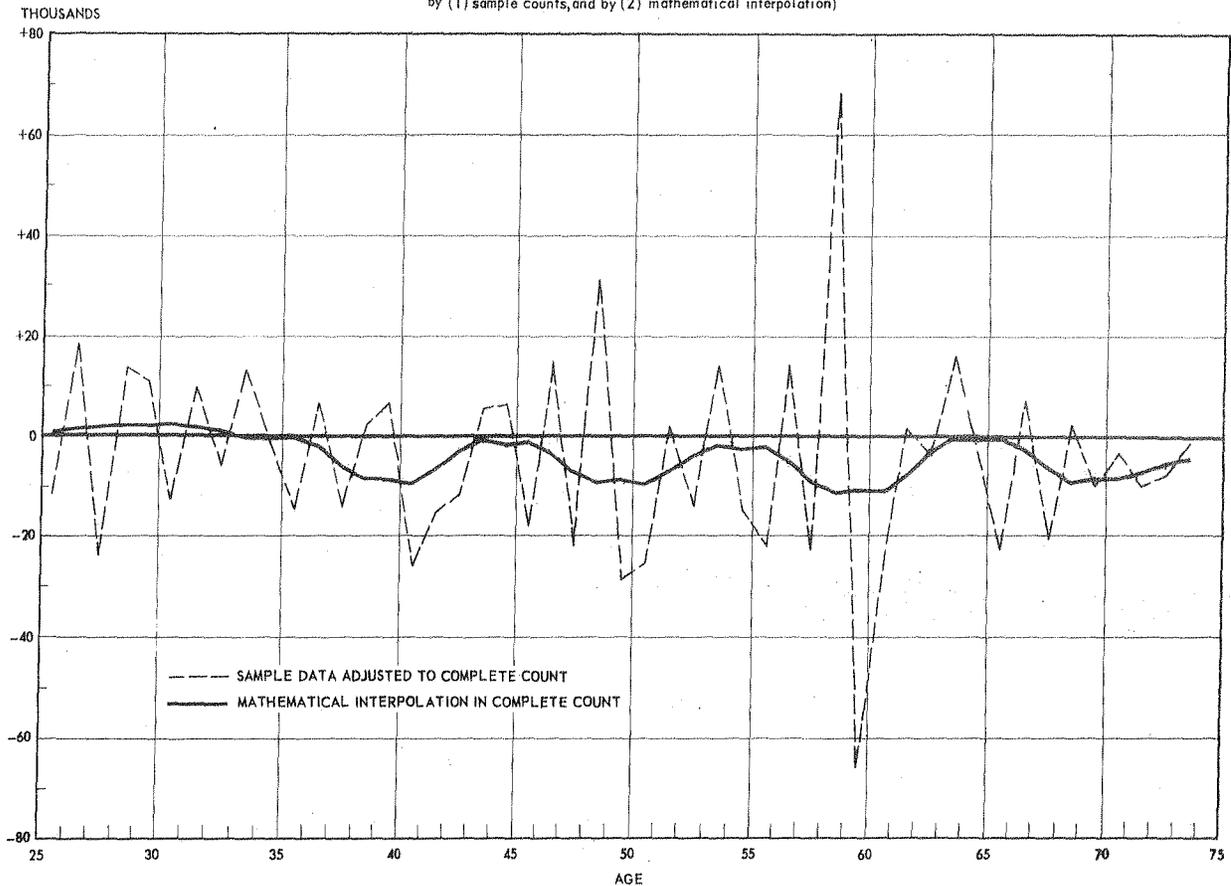

Figure 3.—DIFFERENCE BETWEEN SUCCESSIVE SINGLE YEARS OF AGE, 25 TO 74, OF THE NONWHITE POPULATION: 1960

(Single-year-of-age estimates obtained by interpolation in the five-year age groups in the complete count by (1) sample counts, and by (2) mathematical interpolation)

percent and 3.6 percent, respectively.<sup>8</sup> In light of the evidence available to date, it seems likely that children under 5 years old were as completely counted in 1960 as persons in many other age groups.

The improvement in the 1960 Census may be related, in part, to the use of a question on date of birth, rather than age at last birthday, to obtain information

<sup>8</sup> See Donald S. Akers, "Estimating Net Census Undercount in 1960 Using Analytical Techniques" (unpublished), paper presented at the annual meetings of the Population Association of America at Madison, Wis., May 1962. Estimates of the percent undercount in the population under 15 years of age, for 1950 and 1960, by color and sex, are as follows:

Year and age	All classes	White		Nonwhite	
		Male	Female	Male	Female
1960:					
Under 5.....	-2.6	-2.1	-1.4	-7.9	-6.4
5 to 9.....	-2.4	-2.4	-1.5	-5.3	-4.3
10 to 14.....	-1.9	-2.2	-1.1	-4.2	-3.1
1950:					
Under 5.....	-4.7	-4.3	-3.7	-9.9	-9.2
5 to 9.....	-3.6	-3.0	-2.4	-10.4	-8.7
10 to 14.....	-1.8	-1.0	-1.1	-6.1	-6.4

on age. The distribution of an Advance Census Report to each household made it more feasible for the informed members to supply answers and for records to be consulted. These two innovations would have contributed to reduction in age bias in reporting; self-enumeration on the Advance Census Report also may have led to improved coverage.

II. Estimates for 1950 to 1959.--The estimates for 1950 to 1959 shown here in appendix tables 1 to 5 are essentially the postcensal population estimates published annually during the 1950's in the P-25 series of reports, Nos. 146, 170, 193, and 212, modified to take account of the results of the 1960 Census. It was to be expected that when the 1960 Census results became available, these figures would be somewhat out of line with the postcensal series which were derived on the basis of the 1950 Census and on estimates of births, deaths, and net immigration over the period.<sup>9</sup>

<sup>9</sup> See Current Population Reports, Series P-25, No. 98, "Estimates of the Population of the United States and of the Components of Change, by Age, Color, and Sex: 1940 to 1950," August 13, 1954.

In many cases, the differences between the postcensal estimates for April 1960 and the census count proved relatively small; however, in a number of cases, the differences were large enough to cause a marked discontinuity in the series in going from estimates for July 1959 based on the 1950 Census to estimates for 1960 and later years based on the 1960 Census. This disruption in the series had significant effect in the derivation of a variety of rates using population as its base (such as birth and death rates).

In order to provide a smooth transition from the 1950-based estimates to the 1960-based estimates, the differences between the postcensal estimates for April 1960 and the census counts by age, color, and sex were prorated uniformly, by age, back over the decade. The amount of adjustment required to bring the postcensal estimates in line with the 1960 Census count is shown in table I. To illustrate: the 1960 Census count exceeded the postcensal estimate of the white male population 40 to 44 years of age by 42,000. Consequently, the postcensal estimate of the population 40 to 44 years of age for white males for each year was increased proportionately to the length of the time period of the date of the estimate from the 1950 Census. Thus, for July 1959, the adjustment amounted to +39,000, viz.,  $(9.25/10.00 \times 42,000)$ .

The intercensal estimates for 1950 to 1959 relate to conterminous United States (48 States and the District of Columbia). Estimates for the population including Alaska (49 States and the District of Columbia) are also shown for July 1, 1959 (Alaska became a State on January 3, 1959).

These estimates are preliminary and are designed primarily to provide, on an interim basis, a consistent series of population estimates for the intercensal period. The estimates are deemed to be adequate for the computation of rates and for many other purposes. The Bureau of the Census plans to derive an improved series of intercensal estimates for the 1950-1959 period, which will take account of revisions in the estimates of the basic components of change as well as refining the method by which the error of closure is allocated. The estimates will also be modified to include Alaska and Hawaii in the total coverage.

Table I.—ERROR OF CLOSURE BETWEEN THE POSTCENSAL ESTIMATES OF THE TOTAL RESIDENT POPULATION OF CONTERMINOUS UNITED STATES AND THE CENSUS COUNTS, BY AGE, COLOR, AND SEX: APRIL 1, 1960

(Plus sign (+) indicates census count higher than postcensal estimate)

<sup>1</sup> Adjusted for misreporting of age.

Table A-1.--ESTIMATES OF THE TOTAL RESIDENT POPULATION OF CONTERMINOUS UNITED STATES, BY AGE, COLOR, AND SEX:  
JULY 1, 1950 TO 1959--Con.

(In thousands. Excludes Alaska and Hawaii. Figures include Armed Forces stationed in the United States but exclude those stationed outside conterminous United States. All figures have been rounded to the nearest thousand; hence, the sum of parts may differ slightly from the totals shown. Median age based on unrounded figures)

Table A-2.--ESTIMATES OF THE TOTAL POPULATION OF CONTERMINOUS UNITED STATES, INCLUDING ARMED FORCES ABOARD, FOR SELECTED AGES, BY COLOR AND SEX: JULY 1, 1950 TO 1959

(In thousands. Excludes Alaska and Hawaii. Figures for ages under 15 years and 50 years and over are the same as those shown in table A-1. Figures represent the sum of the total resident population and Armed Forces stationed outside conterminous United States. Figures have been rounded to the nearest thousand; hence, the sum of parts may differ slightly from the totals shown)
