# ESTIMATES OF THE POPULATION OF THE UNITED STATES, BY AGE, RACE, AND SEX: JULY 1, 1964 TO 1967\*

(Estimates shown here are consistent with figures for 1960 to 1963 published in Series P-25, No. 321, but supersede the estimates for later dates published in that report)

## INTRODUCTION

This report presents preliminary estimates of the population of the United States, by age, race, and sex for July 1, 1967, revised estimates for July 1, 1964<sup>1</sup> to 1966, and corresponding data for April 1, 1960, the date of the most recent census. Estimates for three concepts of population coverage are presented: the total population including Armed Forces overseas, the total resident population, and the civilian resident population. The total resident population conforms to the United States population for which the principal tabulations are made for the decennial census reports. It includes residents of the 50 States and the District of Columbia but excludes residents of Puerto Rico, residents of the outlying areas under United States sovereignty or jurisdiction, and other American citizens living overseas. The total population including Armed Forces overseas includes, in addition to the total resident population, the Armed Forces stationed in foreign countries and in the outlying areas but

not their dependents living in those areas. The civilian resident population represents the total resident population less the Armed Forces stationed in the United States.

This annual report of the population of the United States by age differs from previous reports in that it shows figures for the Negro population as well as for the total nonwhite population. In some of the detailed tables such as tables 1 and 2, and in some of the text tables, Negro data by age and sex are shown rather than nonwhite data.

## INDICATED CHANGES

From April 1, 1960, the date of the most recent census, to July 1, 1967, the total population of the United States including Armed Forces overseas increased from 180.0 million to 199.1 million, a gain of 10.6 percent. Changes, by age, varied considerably from the average for all ages, however (table A). Particularly noteworthy is the decrease in the age group under 5 years old, reflecting the recent decline in births. The most rapidly growing age groups are those containing persons born in the decade of the "baby boom" following World War II.

<sup>1</sup>An exception is that the Negro estimates for July 1, 1964, are the same as those previously published in P-25, No. 367.

\* Prepared by W. D. Jones, National Population Estimates and Projections Branch, Population Division.

In the year ending July 1, 1967, the total population increased by only 2,198,000, or 1.01 percent. This rate of population growth is less than the 1.20 percent for the previous fiscal year and continues a series of successively lower annual growth rates since 1957, when the percent of population growth was 1.82 percent (figure 2).<sup>2</sup> Recent decreases in the number of births, the major component affecting population change, have caused a decline in growth for both the white and nonwhite population. Currently the crude birth rate, the number of births per 1,000 of the population, is near the level of the mid-1930's. Nevertheless, a significant event in population growth occurred in November 1967, when the total population including Armed Forces overseas reached 200 million.<sup>3</sup>

<sup>2</sup>See also Current Population Reports, Series P-25, No. 368.

<sup>3</sup>U.S. Bureau of the Census, 200 Million Americans, November 1967, U.S. Government Printing Office, Washington, D.C. 20402.

Age composition.--The age composition of the population by sex for 1960 and 1967 appears in the population pyramid on the cover (figure 1). The number of children under 5 decreased by 5.6 percent. The gains in the other ages under 25 are a consequence of the higher annual numbers of births in past periods and show the increasing relative importance of the young in our population. The population of high school age (14 to 17) and the population of college age (18 to 24) grew by 31.0 percent and by 39.4 percent, respectively, from 1960 to 1967. The gain for those of elementary school age (5 to 13) was 13.0 percent. The number of adults 25 to 44 years of age showed no appreciable change, while the numbers of those over 45 years grew at a rate above the average for that period. During the next several years, the age group 20 to 24 will grow the most rapidly. In contrast, during the 1950 to 1960 period, the most rapidly growing age groups had been those under 18 and over 65; the population 18 to 34 years old declined.

An indication of the size of the post-war baby boom and its effect on the age distribution may be seen in the fact that those born in the year just before the beginning of the boom, that is, the population 21 years old in 1967, number 2.8 million, whereas those born one year later, the 20-year-olds, number 3.8 million. The largest cohort ever to be born in the United States, numbering 4.3 million, was born in the year ending July 1, 1961, and is now six years old.

**Population by race.**--The white population was 87.9 percent of the total population on July 1, 1967; the Negro population was 11.0 percent. From 1960 to 1967, the white population grew from 159 million to 175 million. The Negro population grew from 19 million to 22 million.

Between 1960 and 1967, Negroes increased more rapidly than whites in virtually every age group and especially in those age groups born since World War II (table B and figure 3). For those 14 to 17 years old, the white population increased by 29 percent, whereas the Negro population increased by 45 percent. In the older age

groups, Negroes represent a substantially lower proportion of the population than in the younger age groups, because the birth rate for whites more nearly equalled the birth rate for Negroes in the early years of the century, Negroes have a relatively high death rate, and there has been less immigration of Negroes than whites. Thus, in 1967, Negroes made up 7.2 percent of the population 65 and over, but 15.1 percent of the population under 5 years.

**Annual growth rates.**--Growth rates by fiscal years for the white, nonwhite, and Negro populations are shown in figure 2.<sup>4</sup> The white and nonwhite populations have shown similar time patterns of change in net growth, except for the years during and immediately after World War II, although non-white growth rates have been higher than those for whites. Since 1957, however, both populations have shown definite and similar downward trends in the rates of net growth.

<sup>4</sup>Annual net growth rates for the total population, including Armed Forces overseas, are shown in Current Population Reports, Series P-25, No. 368.

<sup>1</sup>Excludes Alaska and Hawaii. Figures for 1930 and earlier years are based on the resident population excluding the small number of Armed Forces overseas.

Median age.--Since the mid-1950's, the median age of the population has been dropping. The decline is now leveling off, however, because of recent decreases in the annual number of births (table C). The median age (the age which divides the population into two equal parts, one-half older and one-half younger than the median) declined from 30.2 years in 1950 to 27.7 years in 1967, the lowest it has been since the 1930's. The continued advantage of women over men in life expectancy accounts, for the most part, for the gap between the median age of men at 26.4 years and women at 29.0 years, in 1967. The median age for Negroes and for all nonwhites is considerably lower than that for whites, reflecting the effect of both higher birth rates and higher death rates.

Population reaching selected ages.--The number of persons reaching certain "key" ages in the life cycle is shown in tables D and E and in figure 4. The number of children reaching age 6, when most children enter the first grade, was 4.3 million in 1966-67 compared with 4.0 million at the beginning of the decade and 2.7 million in 1950-51. Changes in the number reaching age 18 are of particular interest, because at that age many become subject to military service, enter the labor force, enter college, or marry. The recent increase in this number to over 3.5 million and the earlier increases in those reaching age 14 and age 6 are the result of the great rise in births after World War II. The number reaching age 6 is expected to decline over the next several years, reflecting the decline in the annual number of births occurring after 1961.

<sup>1</sup>Periods extend from July 1 of initial year to June 30 of terminal year.

**Sex ratio.**--The sex ratio, that is, the number of males per 100 females, continues to decrease (table F). For every 100 females, there were 96.8 males in the total population including Armed Forces overseas in 1967, compared with 97.8 in 1960 and 99.2 in 1950. The female population has grown more rapidly than the male population since 1960 largely because of the lower death rate for females and also, to a lesser degree, because of the greater in-migration of females. On the other hand, as slightly more males are born than females, the sex ratio tends to be above 100 until early adulthood, when the effect of higher death rates for males causes the sex ratio to drop noticeably. In 1967, the earliest age group at which the number of females exceeds males in the total population is in the group 25 to 29 years old.

The sex ratio for Negroes of all ages was 93.6 in 1967, 93.8 in 1960, and 94.7 in 1950. Compared with that for the white population, the sex ratio for Negroes for both 1960 and 1967 is lower for all age groups except those 65 years and over. A factor in the lower sex ratio of Negroes is their lower sex ratio at birth, although the greater underenumeration of males than of females among Negroes, as compared with whites, also is a factor.

## SOURCES AND METHOD

**General sources and method.**--The postcensal estimates for July 1, 1964 to 1967, are based on statistics from the 1960 Census of Population; statistics and estimates of births and deaths provided by the National Center for Health Statistics, U.S. Public Health Service; statistics on the number of immigrant aliens admitted to the United States as reported by the Immigration and Naturalization Service of the Department of Justice, supplemented by data on movement to the mainland as reported by the Government of Puerto Rico; data on the size and distribution of the Armed Forces obtained from the Statistical Services Center of the Department of Defense and the various branches of military service; and data on the number of civilian Federal employees overseas, their dependents, and dependents of the Armed Forces overseas obtained from the Civil Service Commission and the Department of Defense.

The estimates have been made by the cohort-component method, employing the total population including Armed Forces overseas as of April 1, 1960, and data on changes since that date. This

method involves bringing forward the population from the census date to the estimate date by aging the population according to the length of the estimate period and by assigning births, deaths, and net immigrants during the estimate period to the proper age group. The total resident population has been estimated by subtracting estimates of Armed Forces overseas from the total population including Armed Forces overseas; the civilian resident population has been estimated by subtracting estimates of all Armed Forces of the United States, those at home and those overseas, from the total population including Armed Forces overseas.

The estimates by age, color, and sex for 1964 to 1967 given in this report were based on, and hence are comparable with, the estimates by age, color, and sex for 1963 previously published in Current Population Reports, Series P-25, No. 321. The 1963 estimates in turn, were based on the estimates of population by age, sex, and color for each prior year back to 1960. The estimates for the Negro population for 1965 to 1967 are comparable with those for 1964 published in P-25, No. 367, which were similarly developed from estimates for prior years. In general, the estimates for each year were carried forward by use of final or preliminary data on births, deaths, and net immigration.

Base population in 1960.--The population estimates are based on complete-count population figures from the 1960 Census tabulated by age, color, and sex. The age detail from the count is for 5-year age groups for ages under 85 years old and for single years of age for ages under 21 years old.<sup>5</sup> To facilitate the computations, the population for ages 21 to 84 was also distributed by single years. The population 21 to 24 years of age, including Armed Forces overseas, was distributed in proportion to annual births from 1935 to 1939. Since births were much less completely registered in the years before 1935 (adjusted estimates of total births are subject to increasingly greater error as one goes back in time) and since immigration contributed substantially to population growth in the pre-Depression years, particularly before World War I, birth statistics were not generally used to distribute the grouped data for the older population by single years. Rather, the 5-year age groups by color and sex of the population including Armed Forces overseas were distributed by mathematical (osculatory) interpolation. This

<sup>5</sup>U.S. Bureau of the Census, 1960 Census of Population, Vol. I, Characteristics of the Population, Part 1, United States Summary, table 46.

form of interpolation provided a series of figures for single years of age which is consistent with the 5-year age totals and shows a smooth transition from one age group to the next. In order to provide a smooth juncture between the figures for single years of age based on births for ages 21 to 24 and those obtained by mathematical interpolation for ages 30 and over, the figures for single years of age for the 25-to-29 year age group were derived by averaging the results of the two methods. The procedure involved splicing the two series over the five ages by applying shifting pairs of complementary weights to the original pairs of estimates, each series of weights forming a linear progression.

Data for the Negro population by single years of age and sex are not available from the 1960 Census and data by 5-year age groups are available only from the 25-percent sample. Therefore, the 25-percent sample data for Negroes were used as the base population and were adjusted in proportion to complete-count data for nonwhites by 5-year age groups to improve the distribution by age. Conversion of the 5-year data to single years of age for the population 30 years and over for Negroes and for nonwhite was obtained by osculatory interpolation as described above.

For ages under 30, the Negro population was obtained by applying the percent Negro to total nonwhite for single year-of-age data. The percent Negro of the total nonwhite population was available for 5-year age groups and was estimated for single ages by straight-line interpolation.

Estimates of births and deaths.--The estimates of births and deaths are based on tabulations of vital statistics for the resident population made by the National Center for Health Statistics, U.S. Public Health Service. The estimates employed final tabulations of births and deaths through December 1965 and preliminary tabulations through June 1967. Births for whites and nonwhites were corrected for under-registration by factors determined by extending to subsequent years the results of the Birth Registration Test conducted by the Public Health Service and the Bureau of the Census in conjunction with the 1950 Census. No similar registration test was conducted in 1960. The percent completeness of birth registration for 1966 was estimated provisionally to be 99.4 percent for whites and 97.7 percent for nonwhites. Negro births were adjusted for underregistration by the factors for nonwhites. Since final births for Negroes are available only by calendar year, for fiscal year estimates they were prorated in proportion to the distribution of nonwhite births.

Deaths in 1966 and the first half of 1967 were distributed by age, race, and sex partly on the basis of a tabulation of a 10 percent sample of death certificates for this period and partly on the basis of final tabulations for 1965.

Net immigration.--Available and pertinent statistics on net civilian immigration are composed of four categories: (1) immigrant aliens from overseas; (2) net movement of citizens from overseas; (3) net arrivals from Puerto Rico; and (4) aliens from overseas admitted as "parolees", which includes "nonimmigrants" from Cuba and Hong Kong. Data for these categories by age, sex, and color were available through the period ending July 1, 1966. The components of net immigration for July 1, 1966 to 1967, were estimated partly from preliminary figures on immigration from the Immigration and Naturalization Service for that period and partly from extensions of data for previous years. The age, sex, and race distribution for July 1, 1966 to 1967, was assumed to be the same as for the previous year.

The Immigration and Naturalization Service reports the number of alien immigrants by age and sex on a fiscal year basis. For the present estimates, data through June 1966 were employed. The data for each year include alien immigrant arrivals in that year who intended to reside here permanently. There are no current data available on the number of alien emigrants. The Immigration and Naturalization Service ceased obtaining information on the race of immigrants after 1961. Estimates of the color of alien immigrants since 1961 were based on the reported country of origin of alien immigrants. The color composition of immigrants from each country was estimated from 1960 Census data on the color composition of the population born in each country. The estimates of Negro immigration, by age, for 1965 to 1966 are based on the previously made estimates of nonwhite alien immigration by country of origin grouped according to the predominance of Negroes or other nonwhites in the population. It was assumed that all nonwhite alien immigrants from Africa and the West Indies were Negroes and that all nonwhite alien immigrants from Asia and Oceania were of other races. It was also assumed that all nonwhite citizen arrivals were Negroes.

Net arrivals of civilian citizens from abroad were estimated on the basis of the change in the number of civilian Federal employees overseas, their dependents, and dependents of Armed Forces overseas for July 1, 1964 to 1966, less births occurring in hospitals overseas operated by the Department of Defense. The data were obtained from the Department of Defense and the Civil

Service Commission. Net movement of civilian citizens overseas not affiliated with the Federal Government is not taken into account.<sup>6</sup>

The Census count on April 1, 1960, was used as the gain in the percentage distribution by age, sex, and color, for each of the above listed categories of civilian citizens overseas. In the case of dependents of Armed Forces overseas, data by color for the Armed Forces overseas according to information from the Department of Defense were also used.

The data on the movement of persons between Puerto Rico and the United States mainland are based on the movement of passengers as reported by the Puerto Rico Planning Board. The age and sex distribution of these travelers is based on a sample survey taken by the Puerto Rico Bureau of Labor Statistics and released by the Division of Demographic Registry and Vital Statistics of the Puerto Rico Department of Health.<sup>7</sup> All migrants from Puerto Rico were assumed to be white. Data through December 1966 were employed in preparing the estimates for 1967 given here.

The fourth category of immigrants in the total is parolees admitted. During fiscal years 1965 and 1966, this has included persons admitted conditionally from Cuba and Hong Kong and "refugees-escapees" allowed in under the Act of July 14, 1960, who have not been considered alien immigrants. After coming to this country, some parolees are permitted to change their status to that of alien immigrant. Upon changing their status to alien immigrant, they appear in the published alien immigration statistics. Possible double counting of the parolees for the period July 1, 1964 to 1966, is avoided by obtaining a net figure of parolees admitted less parolees who have changed status. The age distribution for parolees was estimated from that of the population in Florida reported as living abroad 5 years earlier according to the 1960 Census.

<sup>6</sup>The basic formula for estimating net movement of the overseas population involves subtracting natural increase (births less deaths) from total change in the overseas population. As the number of deaths was small, it was disregarded in the calculations.

<sup>7</sup>The Puerto Rican agencies have adopted a new method for estimating the age distribution of net migrants from Puerto Rico. The results of the new method were not available in time to be used in this report. The differences in the age distributions are not appreciable when related to net immigration to the United States, although they are important when considered in terms of the number of net migrants from Puerto Rico.

Armed Forces.--To derive the estimates of the total resident and the civilian resident population, estimates were made of the total Armed Forces and of the Armed Forces overseas, to be subtracted from the estimates of the total population including Armed Forces overseas. The estimates of the Armed Forces are based on data from the Statistical Service Center of the Department of Defense and from the Army, Navy, Air Force, Marine Corps, and Coast Guard (Department of Treasury).<sup>8</sup> Reserve forces on a 6-month tour of training and students at the military academies are included in the Armed Forces; reserve forces on short tours of training, national guardsmen, and officers in the Public Health Service are not included. Crews of naval vessels in American ports are considered as being inside the United States; those in foreign ports or on the high seas are considered as being overseas. The total for each sex-color group for July 1, 1967, was distributed by age on the basis of data for January 1, 1967.

#### RELATED REPORTS

The table below lists other Current Population Reports, containing estimates and projections consistent with the national population estimates in this report and specifies the years for which consistent data are provided.

Series P-25 report number	Type of estimate	Years
321 and 367	U.S., by age, color, and sex.....	1960 to 1963
310	U.S., by age, color, and sex.....	1950 to 1960
311	U.S., by single years of age, color, and sex.....	1900 to 1959
368	U.S., by components of change.....	1940 to 1967
381	U.S., projections by age, sex, and color.....	1967 to 1990
381	U.S., projections by age and sex.....	1990 to 2015
380	States, totals and components of change.....	1960 to 1967
354	States, by broad-age groups.....	1960 to 1966

#### ACCURACY OF ESTIMATES

The population estimates in this report have not been adjusted for underenumeration nor for misreporting of age in the 1960 Census data on which they are based. The nonwhite and Negro estimates, especially for males aged 15 to 44, are considerably understated because of underenumeration in the Census. Substantial work on evaluation of the 1960 Census by age, sex, and color has been carried out. Some of the results of the 1960 Census Evaluation and Research Programs have been published in Series ER-60 and in various special papers; additional results will be published as they become available.<sup>9</sup>

#### ROUNDING

Each figure in this report has been rounded independently to the nearest thousand from figures computed to the last digit; hence, the sum of parts may differ from the totals shown. Medians, percents, and other summary measures are based on the unrounded figures. The medians are based on data for 5-year age groups.

<sup>8</sup>Although estimates of the size and distribution of the Armed Forces for April 1960 are also available from the 1960 Census of Population, the Department of Defense is used as the source for the estimates here because it provides a consistent series over time.
