DETAILED TABLES

Tables

1. Estimates of the components of population change for the United States including Armed Forces overseas, by annual and semiannual periods: 1940 to 1971	9
2. Annual estimates of the population of the United States, by type of population: April 1, 1940, to April 1, 1970	11
3. Annual estimates of the population of conterminous United States, by type of population: July 1, 1900 to 1939	11
4. Monthly estimates of the population of the United States, by type of population: January 1, 1960 to 1972	12

For sale by the Superintendent of Document, U.S. Government Printing Office, Washington, D.C. 20402, 15 cents. Current Population Reports issued in Series P-20, P-23, P-25, P-26, P-27, P-28 (summaries only), P-60, and P-65 are sold as a single consolidated subscription at \$14.00 per year, \$3.50 additional for foreign mailing.

ESTIMATES OF THE POPULATION OF THE UNITED STATES AND COMPONENTS OF CHANGE: 1940 TO 1972

(This report replaces Current Population Reports, Series P-25, No. 465. Data are consistent with the official 1970 resident population count for the United States as presented in the PC(1)-A1 United States Summary report)

This report presents estimates of the total population and components of change for the United States to January 1, 1972. Estimates for the period April 1, 1960 to April 1, 1970 have been adjusted to be consistent with the official 1970 resident population count of 203,235,298. The figures for 1960 to 1970 are provisional and will be revised when final estimates of the components of change for the intercensal period are available.

INDICATED CHANGES

On January 1, 1972, the total population including Armed Forces overseas was estimated to be 208,084,000, an increase of 2,011,000, over the previous January 1 (table 1). The rate of increase dropped from 1.09 percent in 1970 to 0.98 in 1971 as the result of a decrease in the number of births and a decrease in net civilian immigration (table 1). The rate of increase has been below 1.10 for the past 5 years after dropping steadily from 1.83 in 1956 to 1.12 in 1966 (table 1).

The crude birth rate (births per 1,000 total population) in 1971 was 17.2, the lowest rate ever recorded in the United States. After falling from 25.2 in 1957 to 17.6 in 1968, the birth rate increased slightly in 1969 and 1970 (table A, figure 1). The decline in the birth rate in 1971 compared to 1970 occurred despite a 4 percent increase in the female population 20 to 29 years of age.

The general fertility rate (births per 1,000 women 15 to 44 years of age) was 81.9 in 1971, the lowest rate since 1940 (table B, figure 2). The lower rate in 1971 was the result of a decrease in the number of births coupled with an increase in the number of women 15 to 44 years of age. The fact that the birth rate is at its lowest point in history while the general fertility rate is above the rates for the 1930's is due to the lower proportion of women in the childbearing ages in 1971 compared to the earlier period. Final birth data in the detail needed to compute the total fertility rate for 1971 are not available, but preliminary estimates computed by indirect standardization suggest that the total fertility rate was slightly below 2,300 in 1971, the lowest rate since the late 1930's.¹

¹The total fertility rate is the number of births that 1,000 women would have in their lifetime if, at each year of age, they experienced the birth rates occurring in the specified calendar year.

Table A. ANNUAL RATES OF NET GROWTH, BIRTHS, DEATHS, AND NET IMMIGRATION: 1933 TO 1971

(Rate per 1,000 of the midyear population including Armed Forces overseas)

¹Births adjusted for underregistration through March 1970.

²For the 48 States excluding Armed Forces overseas.

The death rate in 1971 was 9.3 deaths per 1,000 of the total population including Armed Forces overseas (table A). Less than 0.05 of the 1971 rate was accounted for by deaths to the Armed Forces overseas. Although the death rate has declined slightly each year since 1968, the rate has been generally stable at about 9.5 for the past 20 years (table A, figure 1).

The estimated population growth of 2,011,000 in 1971 was the result of 3,562,000 births, 1,924,000 deaths, and net civilian immigration of 378,000 (table 1). Annual births have always been substantially in excess of annual deaths. The rates approached each other most closely in 1936, when the birth rate was 18.4 and the death rate 11.6, giving a rate of natural increase of 6.8 per 1,000, and a population increase of approximately 750,000. In 1971 the rate of natural increase was 7.9 per 1,000, somewhat lower than

the 1970 rate of 8.8, and about 50 percent below the rates during the mid-1950's.

The net growth rate dropped from 10.9 in 1970 to 9.7 in 1971 (table A). The fall in the birth rate in 1971 was primarily responsible for the lower growth rate, but the decrease in the net civilian immigration rate in 1971 also contributed to the lower rate of population growth. The net growth rate of 7.1 per 1,000 in 1936 was the lowest for any year in the history of the United States.

The total population including Armed Forces overseas increased by 24.3 million between April 1, 1960 and April 1, 1970 (table C). This population growth was greater than for any previous decade except the 1950 to 1960 period when the population grew by 28.3 million. The average annual rate of population growth dropped from 1.71 percent in the 1950's to 1.26 in the

¹Births adjusted for underregistration through March 1970.

1960's. The decline in fertility throughout the 1960's resulted in 1.9 million fewer births in the past decade than during the previous 10 years despite a substantial increase in the number of women in the childbearing ages. The total number of births declined from 40,963,000 during the 1950's to 39,033,000 during the past decade (table C). Net civilian immigration between April 1, 1960 and April 1, 1970 was 3,887,000 compared to 2,975,000 between 1950 and 1960 (table C). Much of the increase in immigration during the 1960's was due to increased immigration after 1965.

The figures for births shown in this report were adjusted for underregistration through March 1970, but not for the months since then. The effect of dropping the adjustment was small, since registration of births is now estimated to be over 99 percent complete. For example, the birth rate for 1971 would have been 17.3 instead of 17.2 if the adjustment had been continued.

COVERAGE OF POPULATION

This report provides estimates of the population of the United States for each July 1 from

1900 to 1971 and for each month from January 1, 1960 to January 1, 1972. The report shows estimates of the components of change for the total population for each calendar year and fiscal year from 1940 to 1970. The fiscal year begins on July 1 and ends June 30.

Two series of estimates are given for the period from 1940 to 1970 (table 2). One series relates only to conterminous United States, excluding Alaska and Hawaii; the other relates to the entire United States, including Alaska and Hawaii.

Estimates of the population are presented from 1940 on for three types--total including Armed Forces overseas, total resident, and civilian resident. The total resident population conforms to the concept of the United States population for which the principal tabulations are made for the census reports. In general, it includes residents for the 50 States and the District of Columbia but excludes residents of the Commonwealth of Puerto Rico, residents of the outlying areas under United States sovereignty or jurisdiction (principally American Samoa, Canal Zone, Guam, Virgin Islands of the United States, and the Trust Territory of the Pacific Islands), and other American citizens living overseas. However, some estimates of the total resident population shown here relate only to conterminous United States, excluding Alaska and Hawaii. The "total population including Armed Forces overseas" includes the total resident population and the Armed Forces stationed in foreign countries and in the outlying areas, but not their dependents. The "civilian resident population" represents the total resident population less the Armed Forces stationed in the United States.

A fourth type of population, shown since 1960, is the most comprehensive population coverage for which estimates are currently provided in this series of publications (table D). In addition to the total population including Armed Forces overseas, this coverage includes the following U.S. civilian population overseas; (1) dependents of members of the Armed Forces and (2) civilian citizen employees of the Federal government and their dependents. At present the dependents of the Armed Forces far out-number the latter category. An even more comprehensive population coverage, in addition to the total population including overseas Armed Forces, government employees, and their dependents, would include (1) crews of merchant vessels overseas and (2) other citizens living overseas. The latter category includes businessmen, students, retirees, and others. Difficulty in obtaining reliable current estimates for these groups has prevented their inclusion in the population estimates presented here.

¹Includes 504,567 overseas civilian employees of the federal government, their dependents, and dependents of the Armed Forces overseas in addition to the total population including Armed Forces overseas shown here.

²Includes approximately 23,000 Armed Forces personnel overseas who resided outside of the United States at the time they entered military service.

³Census counts: April 1, 1970--203,235,298; April 1, 1960--179,323,175.

METHODS AND SOURCES OF DATA

The estimates from 1940 to date involved the following computational steps:

- (1) Last census count of population,
- plus (2) Armed Forces overseas on the census date,
- plus (3) resident births,
- less (4) deaths, including deaths to Armed Forces overseas,
- plus (5) net civilian immigration,
- plus (6) net inductions into Armed Forces overseas,

- plus
- or (7) "error of closure" for the inter-censal period,
- less (8) Armed Forces overseas on the estimate date, to obtain the resident population,
- less (9) Armed Forces in the United States on the estimate date, to obtain the civilian population.

The estimates for earlier years were prepared by essentially the same procedures as the years since 1940.

The Armed Forces components are based on data on the size and distribution of the Armed Forces obtained from the Statistical Service Center of the Department of Defense and from the Army, Navy, Air Force, Marine Corps, and Coast Guard. Reserve forces on 3 and 6 months active duty for training, National Guard reserve forces on active duty for 4 months or more, and students at the military academies are included in the Armed Forces; reserve forces and national guardsmen on shorter tours of training and officers in the Public Health Service are not included. Crews of U.S. Naval Vessels homeported in the United States and not deployed to the overseas fleets are included in the United States resident population; those deployed to the overseas fleets, and those homeported outside the United States are considered overseas.

Estimates of the Armed Forces based on the Defense Department data are used throughout for census dates, although counts of the Armed Forces are obtained in the decennial censuses.

Complete 1970 census data for the Armed Forces are not yet available, but the Department of Defense figures probably will continue to be used to maintain continuity over time. In 1960 and 1950 there was a substantial difference between Department of Defense data and the census counts.² In 1970 there should not be significant differences for the overseas portion of the Armed Forces, since the census counts for overseas personnel were derived from statistics generated by the Department of Defense, except for Navy ships which were enumerated separately. However, the military population residing in the United States was enumerated in 1970 essentially as in 1960, and differences should be expected between the census counts and the Department of Defense reports.

Births and deaths for the resident population are tabulated by the Vital Statistics Division,

²The census counts of Armed Forces and the percent differences from the estimates based on Defense Department data for 1950 and 1960 are as follows:

	Census count		Percent difference from Defense Department data	
	1960	1950	1960	1950
Total.....	2,366,949	1,312,869	-7.1	-14.2
Inside U.S.....	1,733,402	982,313	-6.8	-12.7
Outside U.S.....	633,547	330,556	-8.0	-18.6

National Center for Health Statistics, Public Health Service. Final tabulations for births were used through 1968 and for deaths through 1969. Preliminary estimates of births for 1969, 1970, and 1971 and deaths for 1970, and 1971 were provided by the Department of Health, Education, and Welfare from a compilation of the certificates received by the States during each month.

The Vital Statistics Division has corrected births for underregistration by factors obtained by interpolating and extrapolating the results of the 1940 and 1950 Birth Registration Tests. The tests were conducted in connection with the 1940 and 1950 censuses through the joint efforts of the Vital Statistics Division (Public Health Service), and the Bureau of the Census. A sample birth registration test was conducted by the Bureau of the Census in 1970, covering the period 1964-1968. Preliminary findings of this test confirm in general the level of underregistration observed in 1950 after taking into account percent of births outside of hospitals by race. Some improvement in completeness of registration was indicated for births to Negro and other races. The estimates of births in this report have not yet been adjusted to reflect the results of the 1970 test. For more complete information about the test, see Current Population Reports, Series P-25, No. 460, pp. 5-6. In this report, the number of births was corrected for underregistration through March 1970. The correction was dropped after April 1, 1970 because it is estimated that the registration of births is now over 99 percent complete.

No similar test has ever been conducted for deaths. However, the Census Bureau corrected deaths of children under 1 year old through March 1960 using the same factors as for births. This correction was dropped from the estimates starting in April 1960 because it had become so small as hardly to affect them. The figures on deaths to members of the Armed Forces overseas include data covering the Korean War obtained from the Department of Defense; deaths of military personnel for other periods have been estimated on the basis of data provided by the Department of Defense and the Vital Statistics Division, U.S. Public Health Service.

Data on net civilian immigration are final through June 1971. The figures for the period since April 1, 1960, are based on statistics of net immigration of aliens from foreign countries provided by the Immigration and Naturalization Service of the Department of Justice; on statistics of net immigration from Puerto Rico provided by the Planning Board of the Commonwealth of Puerto Rico; and on data relating to civilian citizens

affiliated with the U.S. Government provided by the Department of Defense and Civil Service Commission. The statistics specifically include the following categories:³

1. Immigrant aliens;
2. Net arrivals from Puerto Rico;
3. Net immigration of civilian citizens affiliated with the U.S. Government;
4. Refugee-escapees covered by the Act of July 14, 1960, and refugees from Cuba and Hong Kong now termed "parolees"; and
5. Other emigrants not included in 2 or 3 above.

An important change in the laws controlling immigration has changed the level and composition of alien immigration. The Immigration Act of October 3, 1965, abolished the national origins quota system and substituted a system of preferences favoring the relatives of U.S. citizens and workers with skills needed in the United States. In addition, since July 1, 1968, there has been a numerical limitation on immigration from the Western Hemisphere for the first time in history. The number of immigrants is limited to 120,000 annually from the Western Hemisphere while the Eastern Hemisphere limit is 170,000 annually. However, immediate relatives of U.S. citizens are exempt from these limitations. The overall volume of immigration increased after 1965, and changes occurred in the age distribution and color composition of immigrants as the new law began to take effect.

Estimates of the emigration of United States citizens and resident aliens after April 1, 1960, were made by the Bureau of the Census using information provided by the Social Security Administration and data presented in statistical publications of various foreign countries. The Immigration and Naturalization Service stopped tabulating data for nonemigrant aliens after June 1956 and for emigrant aliens after June 1957.

³These statistics include certain extraneous categories which tend to cancel out as follows:

- a. Immigrants from foreign countries to Puerto Rico and to other outlying areas are counted with the immigrants to the United States in category 1.
- b. Immigrants from other outlying areas and foreign countries to Puerto Rico are counted with the emigrants from United States in category 2.
- c. Emigrants from Puerto Rico to other outlying areas and foreign countries are counted with the immigrants to the United States in category 2.

Since July 1957, aliens who have had their residence status changed from temporary to permanent have been included in the total for immigrant aliens published by the Immigration and Naturalization Service in the year in which their status was converted. For some of the years since 1957, these immigrants have been allocated back to their probable year of entry. Figures for net arrivals from Puerto Rico were smoothed by use of a centered 12-month moving average to eliminate variations arising from the seasonal movement of travelers. An allowance has been made for Cuban refugees who have come to the United States since April 1960 but who do not appear in the data on alien immigration because they have not yet been granted permanent residence.

The statistics do not include the movement of agricultural workers from Mexico and the British West Indies under special contract. It is believed that they also fail to include some of the aliens entering the country by way of the Canadian or Mexican border.

A category, net arrivals of civilian citizen passengers by ship and plane was employed to account for movements of civilian citizens in estimates for the period prior to April 1, 1960. This has been replaced for the period since that date by the category, net immigration of civilian citizens affiliated with the U.S. Government. The previous item, civilian citizen passengers, showed a persistent excess of arrivals over departures spanning many years, whereas other data suggested an excess of departures in this period. The accuracy of the estimates of net immigration of citizens based on the passenger data depends on the "balancing out" of very large temporary movements, including movements of tourists as well as of U.S. citizens changing their usual residence. As a result, deficiencies in the completeness of reporting of the citizen passenger data in either direction or a substantial net movement of citizens into or out of the United States across our land borders could have a considerable impact on the net immigration figure as representing the balance of changes in usual residence.

Estimates of net immigration of civilian citizens affiliated with the U.S. Government for the period since the 1960 census have been derived from data on births in military hospitals overseas and changes in the numbers of civilian citizen employees of the Federal Government overseas and of citizen dependents of Federal employees

and servicemen.⁴ This basis of estimating net overseas migration of civilian citizens excludes the net overseas movement of citizens not affiliated with the Federal Government.

Figures for net civilian immigration from July 1, 1971, to January 1, 1972, are based on provisional estimates for the 5 categories of net civilian immigration. Immigrant aliens, the largest of these categories, are estimated by the use of a regression equation based on the relationship of immigrant visas issued by the State Department to immigrant alien data from the Immigration and Naturalization Service. To this estimate of immigrant aliens are added current monthly figures for Cuban parolees provided by the Immigration and Naturalization Service, an estimate of net arrivals from Puerto Rico based on currently reported passenger traffic, an estimate of net immigration of civilian citizens affiliated with the U.S. Government, and an estimate of emigration based on the latest data available.

A minor component of population change is shown separately in table C. Inductions less discharges overseas represent the difference between the number of persons inducted into the Armed Forces at overseas locations and the number of servicemen discharged from the Armed Forces overseas. Inductions less discharges overseas for each month were estimated as the net change during the month in the number of recruits from overseas who are in the Armed Forces.

The last of the "components" of change listed in table C is the "error of closure." This is the difference between (1) the population as shown by a census count, and (2) the estimate of the population on that date as derived from the previous census count and data on the various components of population change for the intercensal period. For the period 1960 to 1970, the error of closure amounted to 341,000. Since this difference represents the balance of errors in the estimates of the components of change and in the two census

⁴The estimating procedure consisted essentially of subtracting natural increase (births) of Americans overseas during a given period from the total increase in the number of civilian citizens overseas affiliated with the U.S. Government during the period. For this purpose, the few deaths in the American population overseas, and the balance of U.S. citizens overseas who leave Federal employment but remain overseas and U.S. citizens living overseas who accept Federal employment, were ignored.

counts, the size of the error of closure should not be taken as a measure of the accuracy of either the estimates of the individual components of change or the census counts. In preparing the preliminary intercensal estimates shown in this report, the error of closure was distributed evenly over the 10 year intercensal period, in order to obtain a smooth transition between the 1960 and 1970 census counts.

The components of change from 1950 to 1960, 1960 to 1970, and 1970 to 1972 in table C are given according to three definitions of population, total including Armed Forces overseas, total resident, and civilian resident. These three sets of figures differ only in the treatment of the Armed Forces component. Components of change for the total population including Armed Forces overseas take account of deaths to all members of the Armed Forces, as well as inductions and discharges overseas; those for the total resident population take into account deaths to resident Armed Forces and treat the movement of Armed Forces to and from posts overseas as an additional category of migrants. Components of change for the civilian population omit military deaths but take account of inductions and discharges in the United States.

The estimates presented in this report through April 1, 1960, are the same as those given in Current Population Reports, Series P-25, No. 465. The table below lists other Current Population Reports containing estimates consistent with the national population estimates in this report, and specifies the years for which consistent data are provided.

<u>Type of estimate</u>	<u>Years</u>	<u>Series P-25 report number</u>
U.S. total and components of change, by age, color, and sex..	1950-1960	310
U.S., by age, color, and sex.....	1900-1959	311

Estimates of the population by age and sex for the 1960 to 1970 intercensal period and for July 1, 1970 and 1971 consistent with the national totals shown in this report are scheduled for publication in April 1972.

The estimates shown in this report have been independently rounded to the nearest thousand from figures computed to the last digit. The sums of parts shown may differ from the totals shown. Percents, rates, and averages are based on unrounded numbers.

X Not applicable. Z Less than 500.

¹Percent of population at beginning of period.

²Adjusted for underregistration through March 1970.

³Deaths occurring in the United States plus estimated deaths occurring to Armed Forces overseas. Infant deaths adjusted for underregistration through March 1960.

⁴Comprises estimates of overseas admissions into and discharges from the Armed Forces, and the "error of closure," the amount necessary to make the components of change add to the net change between censuses. See text.

Table 2. ANNUAL ESTIMATES OF THE POPULATION OF THE UNITED STATES, BY TYPE OF POPULATION: APRIL 1, 1940, TO APRIL 1, 1970

(In thousands. For explanation of the three types of population, see text)
