# Money Income and Poverty Status of Families and Persons in the United States: 1974 (Advance Report)

## INTRODUCTION

The median income of all families in the United States was \$12,840 in 1974, according to results of the Current Population Survey (CPS) which was conducted in March 1975 by the Bureau of the Census. This figure represented an increase of about 7 percent over the 1973 median family income. However, after adjusting for the 11 percent increase in prices between 1973 and 1974,<sup>1</sup> the 1974 median in terms of constant dollars decreased by about 4 percent below the 1973 median. The survey also showed that there were about 24.3 million persons below the poverty level in 1974 (\$5,038 for a nonfarm family of four) comprising 12 percent of the U.S. population.<sup>2</sup> Overall, the poverty population was 1.3 million or 5.6 percent higher than the 1973 figure.

## MONEY INCOME IN 1974

The general downturn in the economy coupled with the substantial inflation which occurred between 1973 and 1974 contributed to a decline in real income for both white and black families.<sup>3</sup> The median income of white families was \$13,360 in 1974, a decrease of about 4 percent below their 1973 median when expressed in constant dollars. Similarly, black median family income, estimated at \$7,810 in 1974, decreased by approximately 3 percent in real terms, not significantly different than for whites.

Of the 55.7 million families in the United States in March 1975, 6.4 million or 11.5 percent received incomes of \$25,000 or more in 1974. There were 15.8 million families (28.3 percent) with incomes between \$15,000 and \$25,000; 13.6 million families (24.4 percent) with incomes between \$10,000 and \$15,000; 12.7 million families (22.7 percent) with incomes between \$5,000 and \$10,000; and 7.3 million families (13.1 percent) with incomes below \$5,000.

<sup>1</sup> The percentage increase in prices between 1973 and 1974 is computed by dividing the annual average Consumer Price Index (CPI) for 1974 by the annual average value of the Index for 1973.

<sup>2</sup> See page 3 for an explanation of the poverty definition.

<sup>3</sup> The decline for black families is statistically significant at the 90 percent confidence level. See section on "Source and Reliability of the Estimates."

**Table A. NUMBER OF FAMILIES AND UNRELATED INDIVIDUALS BY TOTAL MONEY INCOME IN 1974**

(Families and unrelated individuals  
as of March 1975)

Total money income	Number of--	
	Families	Unrelated individuals
Total.....	55,712,000	18,872,000
Under \$1,000.....	701,000	1,189,000
\$1,000 to \$1,999.....	766,000	2,171,000

\$4,000 to \$4,999.....	2,305,000	1,526,000
\$5,000 to \$5,999.....	2,475,000	1,375,000
\$6,000 to \$6,999.....	2,478,000	1,202,000
\$7,000 to \$7,999.....	2,501,000	1,025,000
\$8,000 to \$9,999.....	5,203,000	1,613,000
\$10,000 to \$11,999.....	5,702,000	1,185,000
\$12,000 to \$14,999.....	7,879,000	1,047,000
\$15,000 to \$19,999.....	10,032,000	923,000
\$20,000 to \$24,999.....	5,755,000	
\$25,000 and over.....	6,384,000	209,000
Median income.....	\$12,836	\$4,439

Men and women who were income recipients in 1974 had median incomes of \$8,380 and \$3,080, respectively. The 1974 median income for men, expressed in real terms, showed a decline of about 6 percent below the 1973 median. In contrast, the real median income for women did not show a statistically significant change between 1973 and 1974.

The impact of the recession has had an effect on the proportion of male—but not female—civilian income recipients who were year-round full-time workers. The percent of male income recipients who were year-round full-time workers declined from 58 percent in 1973 to 56 percent in 1974. The percentage for comparable women was about 30 percent in 1974, unchanged from 1973.

Although the median earnings of both male and female year-round full-time workers increased between 1973 and 1974, the substantial inflation which occurred during this period caused a decline in their real earnings. For men working year round full time, the

median earnings in 1974 was \$11,840. This represents a decline of about 5 percent in real terms below the 1973 median for comparable men. The median earnings for women working year round full time was \$6,770 in 1974, or about 4 percent below the 1973 median in real terms. The difference between these rates of decline for men and women, however, was not statistically significant.

### CHANGES IN THE POVERTY POPULATION BETWEEN 1973 AND 1974

As a result of the pervasive decline in real income for persons and families, the number of poor persons increased by 1.3 million between 1973 and 1974. As shown in table B, white persons below the poverty level increased by 1.1 million or 8 percent since 1973, whereas sampling variability was too large to measure whether a change in the number of low-income blacks actually occurred. There was a 7 percent increase in the number of poor persons under 65 years since 1973, while the number of low-income persons 65 years and over did not change significantly. This was the first time since 1970, when substantial increases in Social

**Table B. CHANGES IN THE NUMBER OF POOR PERSONS, FAMILIES, AND UNRELATED INDIVIDUALS BETWEEN 1973 AND 1974**

\*1974 figure is significantly different from the 1973 figure at the 95 percent confidence level.

Security benefits were enacted, that the number of aged poor did not decline. Social Security benefits increased at about the same rate as the Consumer Price Index during 1974.

Of the 24.3 million persons below the poverty level in 1974, about 19.4 million were family members, while the remainder were unrelated individuals (persons living alone or with nonrelatives). In 1974, there were 5.1 million families and 4.8 million unrelated individuals below the low-income level. Both of these figures represented increases from the 1973 levels.<sup>4</sup> Increases in the number of low-income families were observed regardless of the sex of the head.

In 1973, there were 9.5 million related children under 18 years in families with incomes below the poverty level. Between 1973 and 1974 this figure increased by 8 percent to 10.2 million, even though the number of children in the total population decreased. The poverty rate for children, therefore, increased from 14.2 percent in 1973 to 15.5 percent in 1974.

These are some of the highlights obtained from the Census Bureau's Current Population Survey (CPS) of March 1975. The information was collected from the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Unrelated individuals under 14 years of age are also excluded from this report. More detailed income and poverty data for families and persons will appear in separate reports in this series to be issued later this year. Furthermore, another report in this series will be issued which will show detailed income data for households.

### DEFINITIONS AND EXPLANATIONS

**Money income.** Data on income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and workmen's compensation; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and

<sup>4</sup>The increase for unrelated individuals was statistically significant at the 93 percent confidence level.

consumed on the farm; or that nonmoney incomes are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, public assistance, and net income from interest, dividends, rentals, etc. Overall, income earned from wages or salary is much better reported than other sources of income and is nearly equal to independently derived administrative sources. By contrast, 1973 income data on Social Security and public assistance payments to beneficiaries were approximately 89 and 75 percent, respectively, of independently derived estimates. For further details, see **Current Population Reports**, Series P-60, No. 97.

**Low-income (poverty) classification.** Families and unrelated individuals are classified as being above or below the low-income level using the poverty index adopted by a Federal Interagency Committee in 1969. This index is based on the Department of Agriculture's 1961 Economy Food Plan and reflects the different consumption requirements of families based on their size and composition, sex and age of the family head, and farm-nonfarm residence. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spend approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by

factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households.

The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). Thus, the poverty threshold for a nonfarm family of four was \$5,038 in 1974, about 11 percent higher than the comparable 1973 cutoff of \$4,540. For further details, see **Current Population Reports**, Series P-60, No. 98.

**Source and reliability of the estimates.** In the March 1975 Current Population Survey (CPS) of the Bureau of the Census, approximately 47,000 households were eligible for interview. Of this number, 2,000 occupied units, on the average, were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason. Since the estimates in this report are based on a sample, they are subject to sampling variability. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting. All statements of comparison appearing in the text are significant at a 2.0 standard error level or better. Thus, for all differences cited in the text, the estimated difference is greater than twice the standard error of the difference. This means that the chances are at least 19 in 20 that a difference identified in the text indicates a true difference in the population rather than the chance variations arising from the use of samples. Statements of comparison qualified in some way (e.g., by use of the phrase "some evidence") have a level of significance between 1.6 and 2.0 standard errors. Standard errors are shown in this report for median incomes (tables 1 and 7) and for the number of poor (tables 12 and 13). For a detailed discussion of the use of standard error tables, consult **Current Population Reports**, Series P-60, Nos. 97 and 98.
