CURRENT POPULATION REPORTS

# Population Estimates and Projections

Series P-25, No. 631

Issued July 1976

## ESTIMATES OF THE POPULATION OF NEW YORK COUNTIES AND METROPOLITAN AREAS: JULY 1, 1974 AND 1975

This report presents total population estimates for July 1, 1974 and provisional estimates for July 1, 1975 for counties and metropolitan areas in New York. These estimates were prepared by the Bureau of the Census as part of its continuing population estimates program. They are consistent in methodological approach with county estimates for other States jointly prepared by State agencies and the Bureau of the Census under the auspices of the Federal-State Cooperative Program and published in **Current Population Reports**, Series P-26.

County estimates for July 1, 1971, 1972, 1973 and provisional July 1, 1974, were published earlier in **Current Population Reports**, Series P-25, Nos. 517, 527, and 599. The provisional estimates in the last cited report are superseded by the numbers published here.

This report shows estimates that are comparable to those prepared last year when administrative records on a national basis first became available as a data source. Because of the resulting change in weighting which occurred then and has been continued here, the estimates shown may not always be completely comparable with those for the years prior to 1973.

The methods used have been tested against the 1970 census and recent special censuses. A decision on current methodology was made by the Bureau of the Census on the basis of the tests. For a more detailed description of the Federal-State Cooperative Program and an analysis of 1970 test results for methods other than the recently developed Administrative Records

method, see **Current Population Reports**, Series P-26, No. 21, "Federal-State Cooperative Program for Local Population Estimates: Test Results—April 1, 1970," April 1973. The results of a test of the Administrative Records method are presented in **Current Population Reports**, Series P-25, Nos. 546-595.<sup>1</sup>

The estimates shown for July 1, 1974, are based on an average of the following methods:

1. **The Regression (ratio-correlation) method.** In the Regression method a multiple regression equation is used to relate changes in a number of different data series to change in population distribution.<sup>2</sup> The series of data used in the Regression method for New York are: elementary school enrollment in grades 1 through 8 plus elementary special and elementary ungraded ( $X_1$ ), two-year average of resident births ( $X_2$ ), two-year average of resident deaths ( $X_3$ ), and registered

<sup>1</sup> Results of earlier studies were given in "Use of Administrative Records for Small-Area Population Estimates," by Meyer Zitter and David L. Word; a paper presented at the Annual Meeting of the Population Association of America, New Orleans, Louisiana, April 27, 1974. A copy of this paper can be obtained by writing Chief, Population Division, Bureau of the Census, Washington, D.C. 20233.

<sup>2</sup> Descriptions of methodologies are given in **Current Population Reports**, Series P-25, Nos. 427 and 520. Modifications made to the methodologies for the current series will be given in forthcoming reports in Series P-25.

automobiles ( $X_4$ ). The prediction equation for New York for the 1970's is given by

$$\hat{Y} = 0.0203 + 0.1847X_1 + 0.2283X_2 + 0.1528X_3 + 0.4406X_4$$

2. **Component Method II.** This method employs vital statistics to measure natural increase and school enrollment to measure net migration. The estimates made by the Census Bureau's Component Method II are specific to the civilian population under 65. To this population is added an estimate of the population 65 and over based on Medicare statistics and an estimate of the resident military population based on station strength statistics.<sup>2</sup>

3. **The Administrative Records method.** This newly developed component method uses administrative records (in this instance individual Federal income tax returns) to measure civilian intercounty migration and reported vital statistics to estimate natural increase.<sup>3</sup> The tax returns are matched for the successive periods to determine the number of persons whose county of residence changed during the estimating period. A net migration rate based on the number of taxpayers changing residence is derived; this rate is then assumed to apply to the total population. This estimate is made specific to the civilian population under age 65 by excluding from the migration computations data relating to persons 65 years and over. These estimates are then combined with independent estimates of the population 65 and over based on Medicare statistics. The other components of population change—births, deaths, immigration, net movement between the Armed Forces and civilian population, and resident military population—are identical with Component Method II (described above).

The provisional July 1, 1975 estimates for large metropolitan counties were developed by adding the average change between 1974 and 1975 estimates based on Component Method II and the Housing Unit method to the 1974 estimates. In the **Housing Unit**

**method** the estimates of the population are based on estimates of the housing inventory. Changes in the housing inventory are derived from data on building permits issued and demolition records, or on data on electric meter connections. The provisional July 1, 1975 estimates for the remaining counties were developed by adding the change between 1974 and 1975 Component Method II estimates to the 1974 estimates.

The estimates published in this report were controlled to independent estimates of the State population for July 1, 1974 and July 1, 1975 which differ from those previously published in **Current Population Reports**, Series P-25, No. 615. The State estimates shown here reflect differences between population estimates and special census counts at the county level. Counties which have had special censuses since 1970 are footnoted in table 1.

Table 2 of this report presents estimates of the population of metropolitan areas and metropolitan counties in the State. The titles and definitions of the standard metropolitan statistical areas (SMSA's) are those currently defined by the Office of Management and Budget, Executive Office of the President. Where an SMSA falls in more than one State (indicated in the SMSA title) information on the other State parts of the area can be obtained by referring to the P-26 report for the other States.

Corresponding estimates for other States in the program will be published as they become available. The appendix table shows reports published to date for States in the 1974-75 series, together with those published earlier in the decade.

The 1970 census populations for the State and counties shown on the table reflect all corrections to the census count made subsequent to the release of the official State figure. Counties with corrections of more than 500 are Nassau, Queens, and Suffolk.

The estimates presented in the table have been rounded to the nearest hundred without being adjusted to the State total, which was independently rounded to the nearest thousand. Percentages are based on unrounded numbers. Births and deaths are based on reported vital statistics from April 1, 1970, to December 31, 1974, with extrapolations through June 30, 1975. Net migration is the difference between net change and natural increase.

<sup>2</sup> See footnote 2 on page 1.

<sup>3</sup> For a discussion of this methodology see Donald E. Starsinic, "Development of Population Estimates for Revenue Sharing Areas," in U.S. Bureau of the Census, **Census Tract Papers**, Series GE-40, No. 10, Zitter and Word, *op. cit.*, and **Current Population Reports**, Series P-25, Nos. 546-595.

**Table 1. ESTIMATES OF THE POPULATION OF NEW YORK COUNTIES: JULY 1, 1974 AND 1975**

(State estimates are shown to the nearest thousand, county estimates to the nearest hundred)

Z LESS THAN 50 PERSONS OR LESS THAN 0.05 PERCENT.

<sup>1</sup>THE TOTAL FOR THE STATE SHOWN HERE INCLUDES ALL CORRECTIONS TO THE 1970 CENSUS MADE SUBSEQUENT TO THE RELEASE OF THE OFFICIAL COUNTS. THE OFFICIAL 1970 COUNT FOR NEW YORK WAS 18,241,266.

<sup>2</sup>BIRTHS AND DEATHS ARE BASED ON REPORTED VITAL STATISTICS FROM APRIL 1, 1970 TO DECEMBER 31, 1974, WITH EXTRAPOLATIONS TO JUNE 30, 1975. NET MIGRATION IS THE DIFFERENCE BETWEEN NET CHANGE AND NATURAL INCREASE.

<sup>3</sup>THE JULY 1, 1974 AND PROVISIONAL JULY 1, 1975 STATE ESTIMATES SHOWN HERE DIFFER FROM THOSE PRESENTED IN CURRENT POPULATION REPORTS, SERIES P-25, NO. 615. THE JULY 1, 1974 AND PROVISIONAL JULY 1, 1975 ESTIMATES PUBLISHED IN THAT REPORT ARE 18,101,000 AND 18,120,000 RESPECTIVELY. SEE TEXT FOR EXPLANATION.

<sup>4</sup>THE POPULATION OF PUTNAM COUNTY, AS COUNTED IN THE SPECIAL CENSUS ON APRIL 14, 1975, WAS 68,765. THE ESTIMATES SHOWN HERE HAVE BEEN ADJUSTED TO REFLECT THIS COUNT.

<sup>5</sup>THE POPULATION OF WAYNE COUNTY, AS COUNTED IN THE SPECIAL CENSUS ON APRIL 22, 1975, WAS 82,194. THE ESTIMATES SHOWN HERE HAVE BEEN ADJUSTED TO REFLECT THIS COUNT.
