1Total expenditures are the sum of purchases for each source (including retail electricity sales) less electric power sector purchases of fuel.

2Includes sources shown separately, such as electricity imports and exports and coal coke net imports ($347 million in 2007), which are not included in the states.

3Excludes expenditures on energy sources such as hydroelectric, geothermal, wind, photovoltaic, or solar thermal. Also excluded are expenditures for reported amounts of energy consumed by the energy industry for production, transportation, and processing operations.

4Based on estimated resident population as of July 1.

5Includes fuel ethanol blended into motor gasoline.

6Includes jet fuels.

Survey, Census of Distribution, or Data Collection. Based on the State Energy Data System (SEDS); for information, see “Data Sources and Technical Notes” at Internet site <http://www.eia.doe.gov/energyexplained/data/seds.html>. Release August 28, 2009.
