

Poverty Rates for Selected Detailed Race and Hispanic Groups by State and Place: 2007–2011

American Community Survey Briefs

By Suzanne Macartney, Alemayehu Bishaw,
and Kayla Fontenot

Issued February 2013

ACSB/11-17

INTRODUCTION

Poverty rates are important indicators of community well-being and are used by government agencies and organizations to allocate need-based resources. The American Community Survey (ACS) 5-year data allow for the analysis of poverty rates by race and Hispanic origin for many levels of geography.

In this report, poverty rates are summarized by race and Hispanic origin for the United States, each state, and the District of Columbia.

Poverty rates are also presented for selected detailed race and origin groups in the cities and towns with the largest populations of these groups. For the nation and selected places, poverty rates are summarized for

Figure 1.

U.S. Poverty Rates by Race and Hispanic or Latino Origin: 2007–2011

(For information on confidentiality protection, sampling error, nonsampling error, and definitions, see www.census.gov/acs/www/)

Note: Persons who report only one race among the six defined categories are referred to as the race-alone population, while persons who report more than one race category are referred to as the Two or More Races population. This figure shows data using the race-alone approach. Use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Because Hispanics may be of any race, data in this figure for Hispanics overlap with data for race groups.

Source: U.S. Census Bureau, 2007–2011 American Community Survey.

detailed Asian groups with populations of 750,000 or more, detailed Native Hawaiian and Other Pacific Islander groups with populations of 25,000 or more, and detailed Hispanic groups with populations of 1 million or more.

HIGHLIGHTS

- According to the 2007–2011 ACS, 42.7 million people or 14.3 percent of the U.S. population had income below the poverty level.
- By race, the highest national poverty rates were for American Indians and Alaska Natives (27.0 percent) and Blacks or African Americans (25.8 percent).
- Native Hawaiians and Other Pacific Islanders had a national poverty rate of 17.6 percent.
- For the Asian population, poverty rates were higher for Vietnamese (14.7 percent) and Koreans (15.0 percent), and lower for Filipinos (5.8 percent).¹
- Among Hispanics, national poverty rates ranged from a low of 16.2 percent for Cubans to a high of 26.3 percent for Dominicans.
- Nine states had poverty rates of about 30 percent or more for American Indians and Alaska Natives (Arizona, Maine, Minnesota, Montana, Nebraska, New Mexico, North Dakota, South Dakota, and Utah).

¹ Poverty rates for Vietnamese and Koreans were not statistically different from one another.

Understanding Race and Hispanic Origin Concepts

Individuals who responded to the question on race by indicating only one race are referred to as the race-alone population or the group who reported only one race category. The text and figures of this report show estimates for the race-alone population. Six categories make up this population: White alone, Black or African American alone, American Indian and Alaska Native alone, Asian alone, Native Hawaiian and Other Pacific Islander alone, and Some Other Race alone. Individuals who chose more than one of the six race categories are referred to as the Two or More Races population. All respondents who indicated more than one race can be collapsed into the Two or More Races category which, combined with the six race-alone categories, yields seven mutually exclusive and exhaustive categories. Thus, the six race-alone categories and the Two or More Races category sum to the total population.

Hispanics may be of any race. For each race group, data in this report include people who reported they were of Hispanic origin and people who reported they were not Hispanic. Because Hispanics may be of any race, data in this report for Hispanics overlap with data for race groups. For more information on the concepts of race and Hispanic origin, see Humes, K., N. Jones, and R. Ramirez, “Overview of Race and Hispanic Origin: 2010,” U.S. Census Bureau, 2010 Census Briefs, 2011, available at <www.census.gov/prod/cen2010/briefs/c2010br-02.pdf>.

See Census Briefs and Reports, 2010 Census, at <www.census.gov/2010census/> for more information on the race and origin groups discussed in this report.

- For Asians, nine states had poverty rates of about 10 percent or less (Connecticut, Delaware, Hawaii, Maryland, Nevada, New Hampshire, New Jersey, Virginia, and South Carolina).
- The 2007–2011 national poverty rate for Whites was 11.6 percent, and most states (43) as well as the District of Columbia had poverty rates lower than 14.0 percent for this group.

The estimates contained in this report are based on the 2007–2011 ACS. The ACS is conducted every month with income data collected for the 12 months preceding the interview. The 5-year estimates are period estimates. They represent the characteristics of the population and housing over the specific data collection period.

NATIONAL

During the 2007 to 2011 period, 42.7 million people or 14.3 percent of the U.S. population had income below the poverty level (Table 1). National poverty rates differed widely across race groups and by Hispanic or Latino origin.²

² Definitions of the race and Hispanic-origin groups used in this brief are available in the 2010 ACS Subject Definitions Guide available at <www.census.gov/acs/www/data_documentation/documentation_main/>.

Individuals who responded to the question on race by indicating only one race are referred to as the race-alone population (e.g., "White alone," "Black alone," etc.). As a matter of policy, the U.S. Census Bureau does not advocate the use of the alone population over the alone-or-in-combination population or vice versa. The text and figures of this report focus on the race-alone population. This approach does not imply that it is a preferred method of presenting or analyzing data. The tables in this report show data using both approaches.

Because Hispanics may be of any race, data for Hispanics overlap with data for race groups. Therefore, data users should exercise caution when comparing aggregate results for race population groups and the Hispanic population.

Two groups had poverty rates more than 10 percentage points higher than the U.S. rate for the total population: American Indian and Alaska Native (27.0 percent) and Black or African American (25.8 percent). Rates were above the overall national average for Native Hawaiians and Other Pacific Islanders (17.6 percent) while poverty rates for Whites (11.6 percent) and Asians (11.7 percent) were lower than the overall rate (14.3 percent).³ The Hispanic population had a poverty rate of 23.2 percent, about 9 percentage points higher than the overall U.S. rate (Figure 1).

For a particular race group, poverty rates may differ by detailed race or origin. Some detailed race or origin groups are listed on the ACS questionnaire such as Filipino, Native Hawaiian, or Puerto Rican.

³ Poverty rates for Whites and Asians were not statistically different from one another.

Categories not listed may be handwritten and the responses tabulated within major race groups. Poverty differed across detailed Asian groups. Poverty rates also differed by detailed Native Hawaiian and Other Pacific Islander groups.

An estimated 17.6 percent of the Native Hawaiian and Other Pacific Islander population had income below the poverty level over the 2007 to 2011 period (Figure 2). Within this group, poverty rates ranged from a low of 6.4 percent for Fijians to a high of about 18.0 percent for Samoans and Tongans.⁴ The largest detailed group, Native Hawaiian, had a poverty rate of 14.4 percent, a rate not statistically different from the U.S. average for the total population. For Guamanians or Chamorros, poverty

⁴ Poverty rates for Samoans (17.6 percent) and Tongans (18.1 percent) were not statistically different from one another.

Figure 4.

U.S. Poverty Rates for the Hispanic Population and Selected Detailed Groups: 2007–2011

(For information on confidentiality protection, sampling error, nonsampling error, and definitions, see www.census.gov/acs/www/)

Note: Hispanics may be of any race. For more information, see Ennis, S., M. Rios-Vargas, and N. Albert, "The Hispanic Population: 2010," U.S. Census Bureau, *2010 Census Briefs*, C2010BR-04, 2011, available at www.census.gov/prod/cen2010/briefs/c2010br-04.pdf.

Source: U.S. Census Bureau, 2007–2011 American Community Survey.

was estimated at 11.6 percent, a rate lower than the U.S. average for the total population.

Figure 3 shows that for the Asian population, poverty was estimated at 8.2 percent for both Asian Indians and Japanese. Higher rates were found for Vietnamese (14.7 percent) and Koreans (15.0 percent),⁵ and lower rates were found for Filipinos (5.8 percent).

Many Hispanic groups had poverty rates higher than the overall U.S. rate for the 2007 to 2011 period (Figure 4). Salvadorans and Cubans had poverty rates of 18.9 percent and 16.2 percent, respectively. For Mexicans and Guatemalans,

⁵ Poverty rates for Vietnamese and Koreans were not statistically different from one another.

the rates were about 25.0 percent. Similar rates were found for Puerto Ricans (25.6 percent) and Dominicans (26.3 percent).

STATES

State-level poverty rates also differed widely across race and Hispanic groups for the 2007 to 2011 period. Tables 2 through 8 show poverty rates by race and Hispanic origin for the 50 states and the District of Columbia. Figures 5 through 9 show the variation in poverty levels across the United States for selected race and Hispanic groups.

White

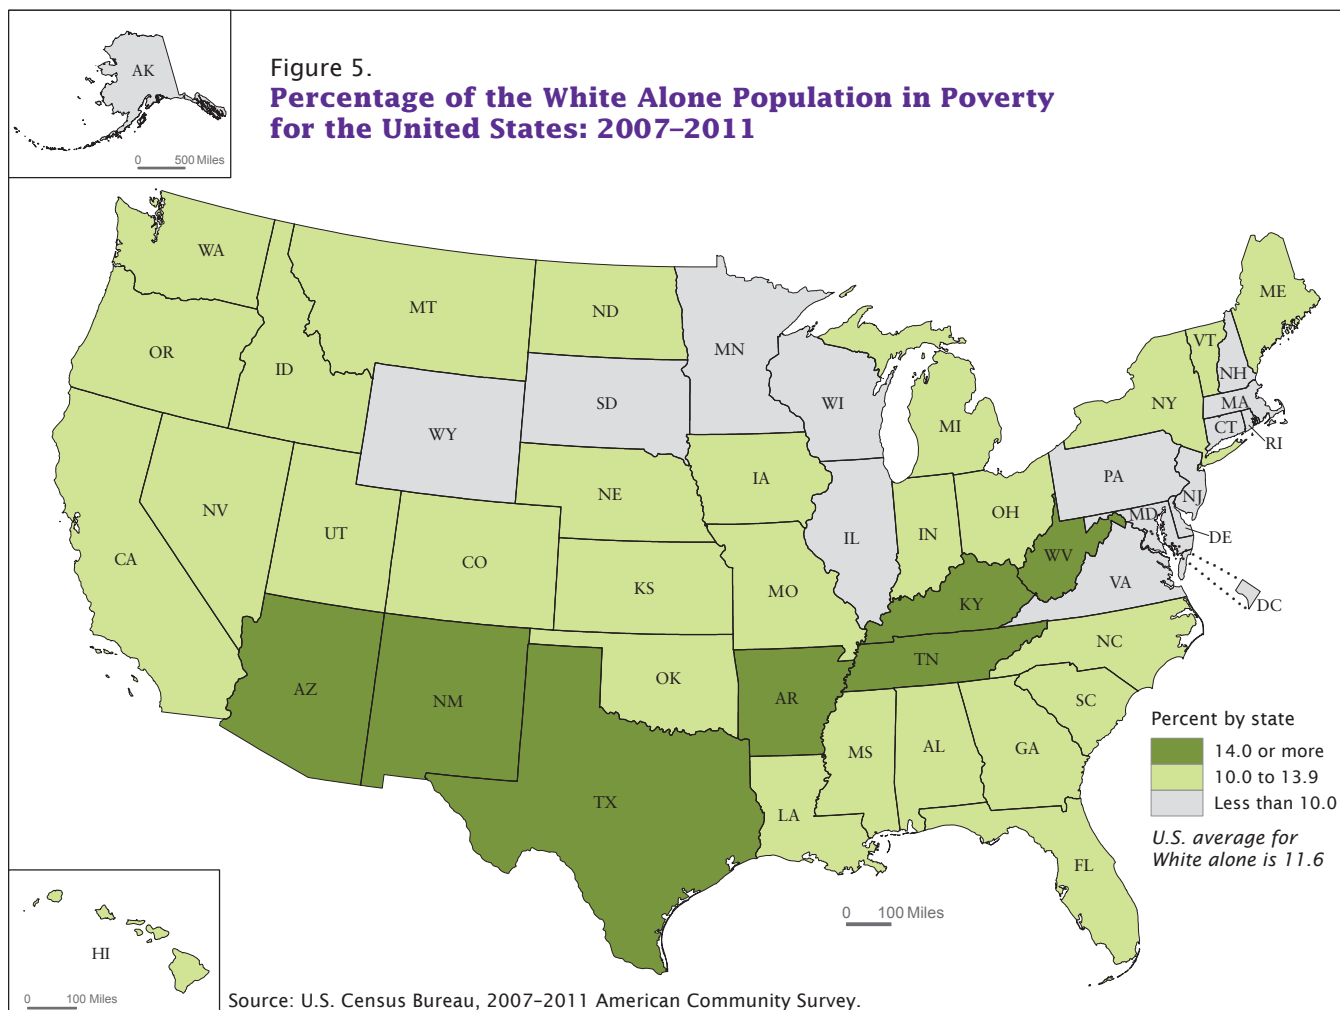

Figure 5 shows the distribution of poverty for the White population.

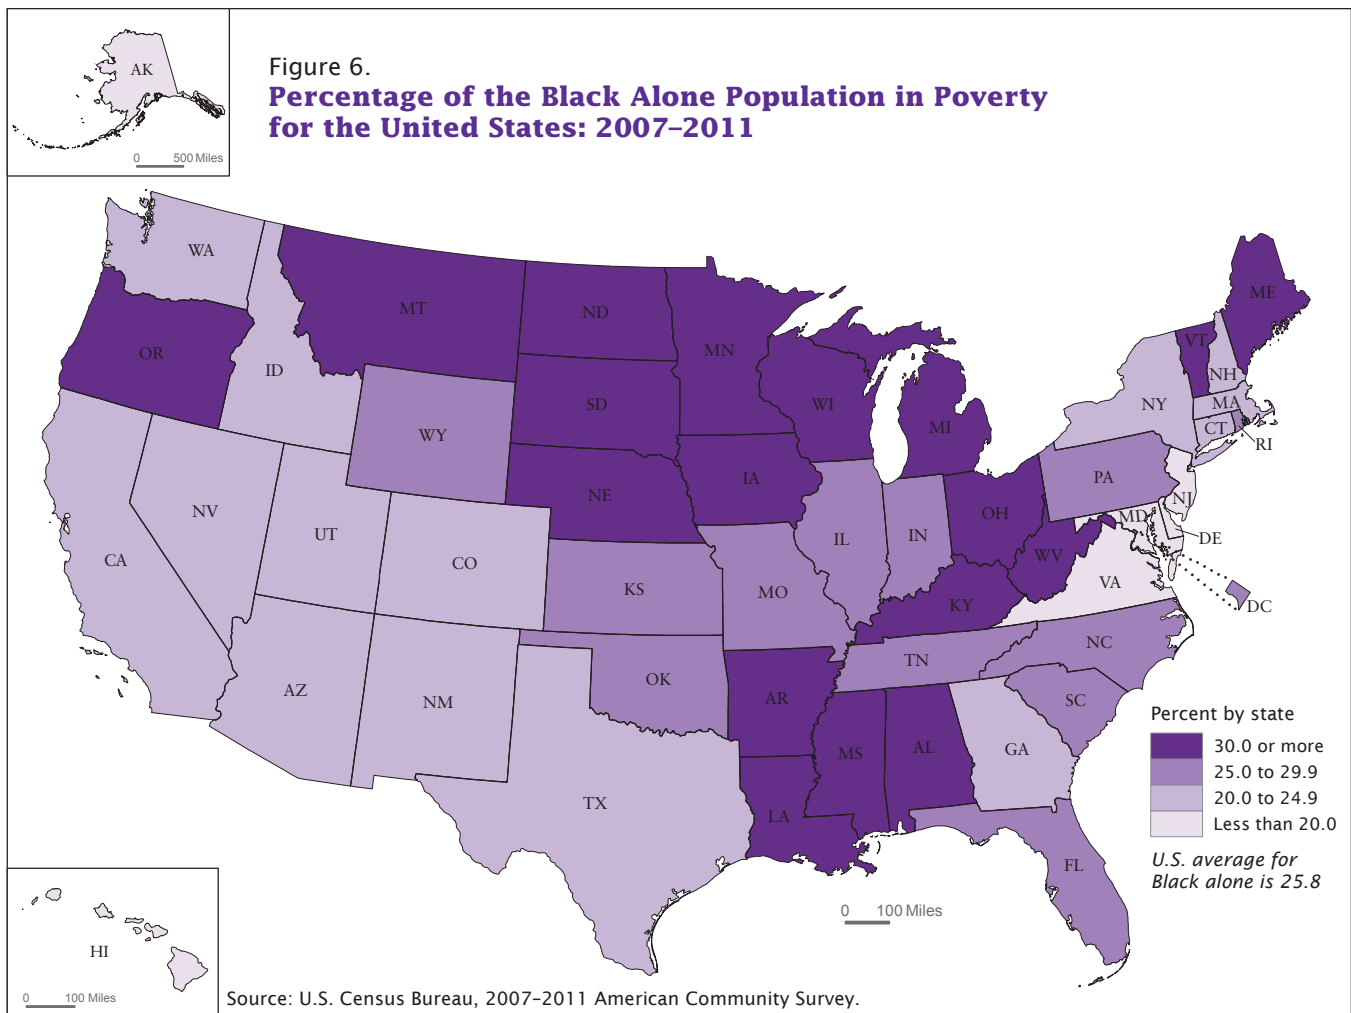

Forty-three states and the District of Columbia had poverty rates for the White population lower than 14.0 percent for 2007 to 2011. Seven states had poverty rates of 14.0 percent or more (Arizona, Arkansas, Kentucky, New Mexico, Tennessee, Texas, and West Virginia).⁶

Black

Figure 6 shows that during the 2007 to 2011 period for the Black population, 43 states and the District of Columbia had poverty rates of 20.0 percent or higher. Iowa, Maine, Mississippi, and Wisconsin had rates above 35.0 percent. Six states had poverty

⁶ Poverty rates for the White population in Arizona and Tennessee were not statistically different from one another. The poverty rate for the White population in Idaho was not statistically different from Tennessee.

rates for Blacks that were about 20.0 percent or less (Alaska, Delaware, Hawaii, Maryland, New Jersey, and Virginia).

American Indian and Alaska Native

Table 2 shows poverty rates for the American Indian and Alaska Native alone population. For American Indians and Alaska Natives, the poverty rates in Maryland (13.9 percent), New Hampshire (15.8 percent), and Virginia (13.8

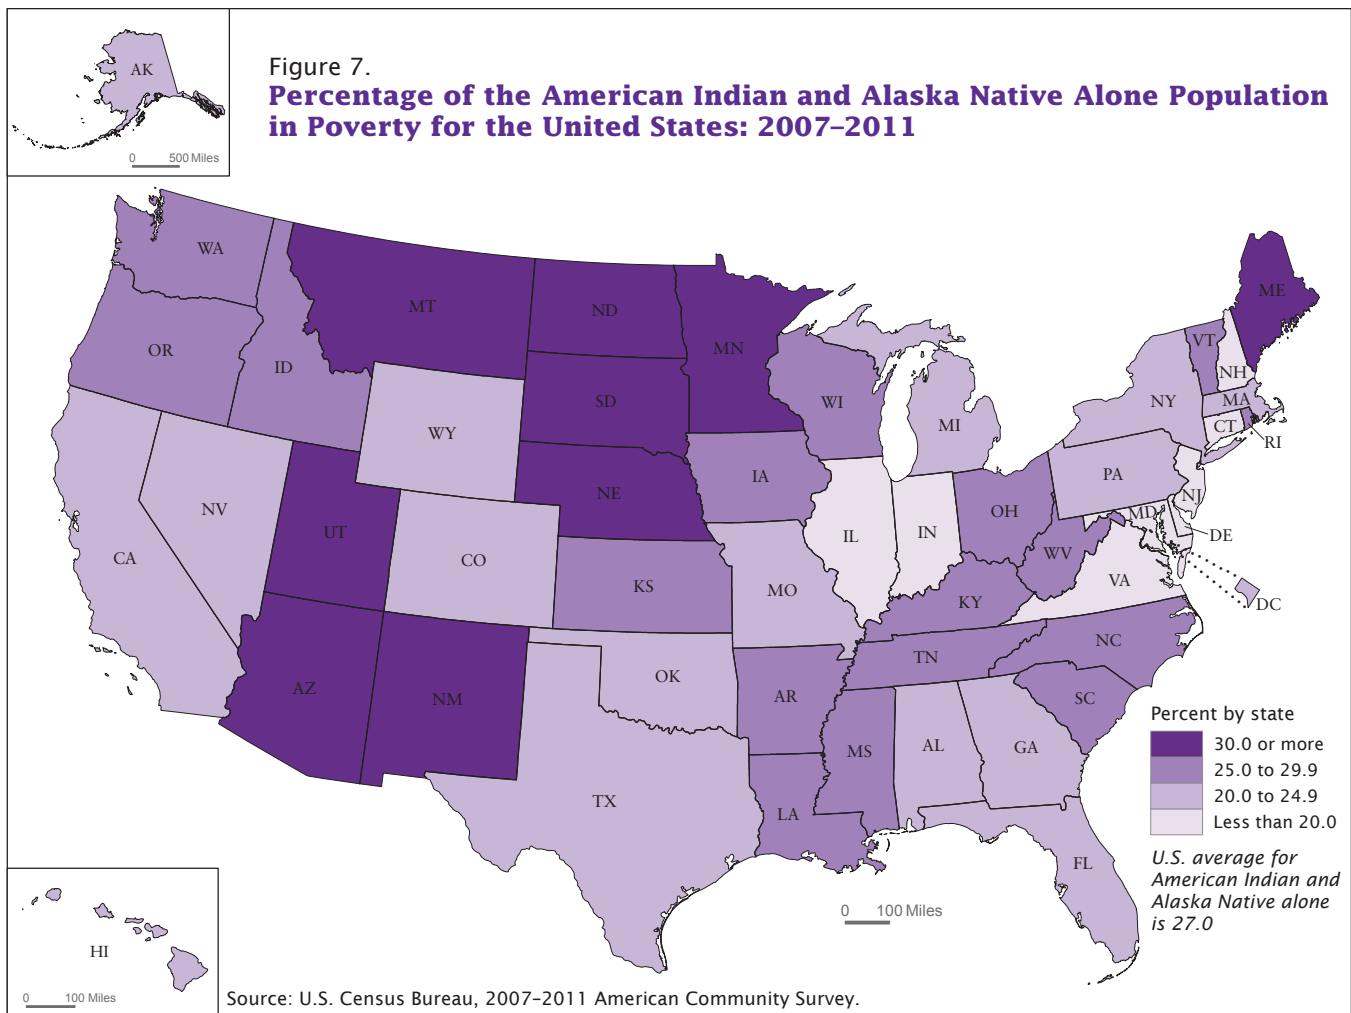

percent) were among the lowest of any states.⁷ By comparison, South Dakota (48.3 percent) had the highest poverty rate for this group. North Dakota was next at 41.6 percent.⁸ Seven other states had poverty rates of about 30.0 percent or more (Arizona, Maine, Minnesota, Montana, Nebraska, New Mexico,

⁷ Poverty rates for American Indian and Alaska Native (AIAN) in Maryland, New Hampshire, and Virginia were not statistically different from one another.

⁸ The poverty rate for AIAN in North Dakota was not statistically different from the rate for AIAN in Nebraska.

and Utah) (Figure 7). Table 3 shows poverty rates for persons identified as American Indian and Alaska Native alone or in combination with one or more other races.⁹

⁹ The maximum number of people who reported a particular race is reflected in the race alone-or-in-combination population. The race alone-or-in-combination population is the total number of people who reported a particular race, whether or not they reported any other races.

Native Hawaiian and Other Pacific Islander

The 2007–2011 ACS poverty rates for the Native Hawaiian and Other Pacific Islander alone population are shown in Table 4. Connecticut (7.0 percent), Illinois (8.6 percent), and New Hampshire (6.6 percent) were among the states with the lowest poverty rates for this group.¹⁰ Poverty rates for

¹⁰ Poverty rates for Native Hawaiian and Other Pacific Islander (NHPI) in Connecticut, Illinois, and New Hampshire were not statistically different from one another.

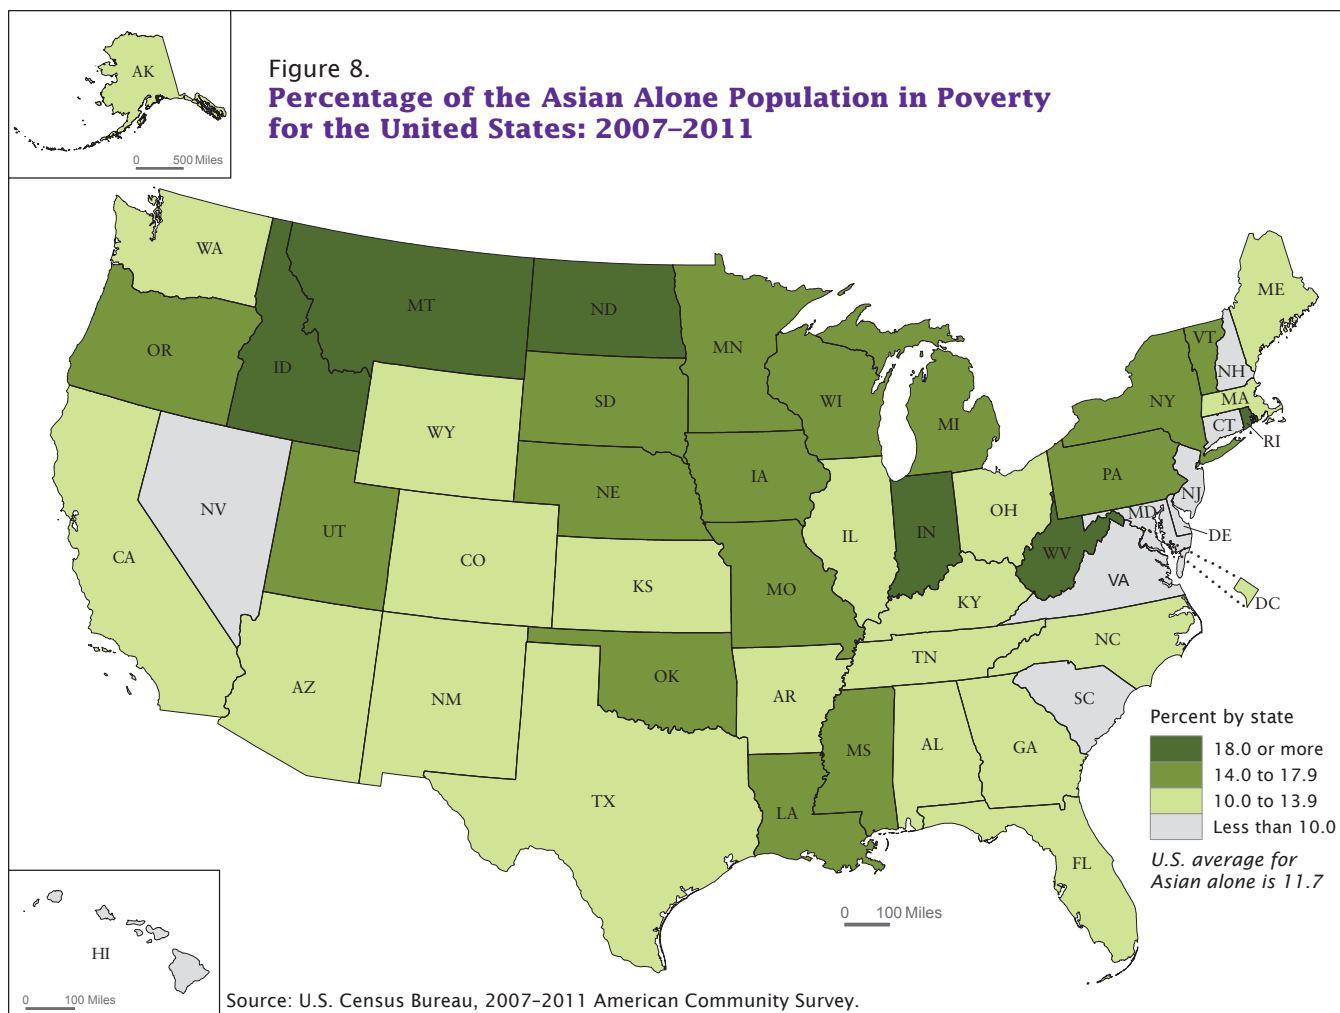

Arkansas (41.8 percent), Nebraska (50.8 percent), and Oklahoma (37.0 percent) were among the highest rates.¹¹ Table 5 shows poverty rates for persons identified as Native Hawaiian and Other Pacific Islander alone or in combination with one or more other races.

¹¹ Poverty rates for NHPI in Arkansas, Nebraska, and Oklahoma were not statistically different from one another.

Asian

Table 6 shows that for the Asian alone population, Delaware (7.9 percent), Hawaii (6.4 percent), and New Jersey (6.8 percent) had some of the lowest state poverty rates for the 2007 to 2011 period.¹² Figure 8 shows six other states with poverty rates of about 10.0 percent or less for Asians (Connecticut, Maryland, New Hampshire, Nevada, South

¹² Poverty rates for Asians in Hawaii, New Jersey, and Delaware were not statistically different from one another.

Carolina, and Virginia). By comparison, Idaho (19.7 percent), Indiana (19.2 percent), and North Dakota (22.3 percent) had some of the highest poverty rates.¹³ Table 7 shows poverty rates for persons identified as Asian alone or in combination with one or more other races.

Hispanic or Latino

For the Hispanic or Latino population, Alaska (10.3 percent) had the

¹³ Poverty rates for Asians in Idaho, Indiana, and North Dakota were not statistically different from one another.

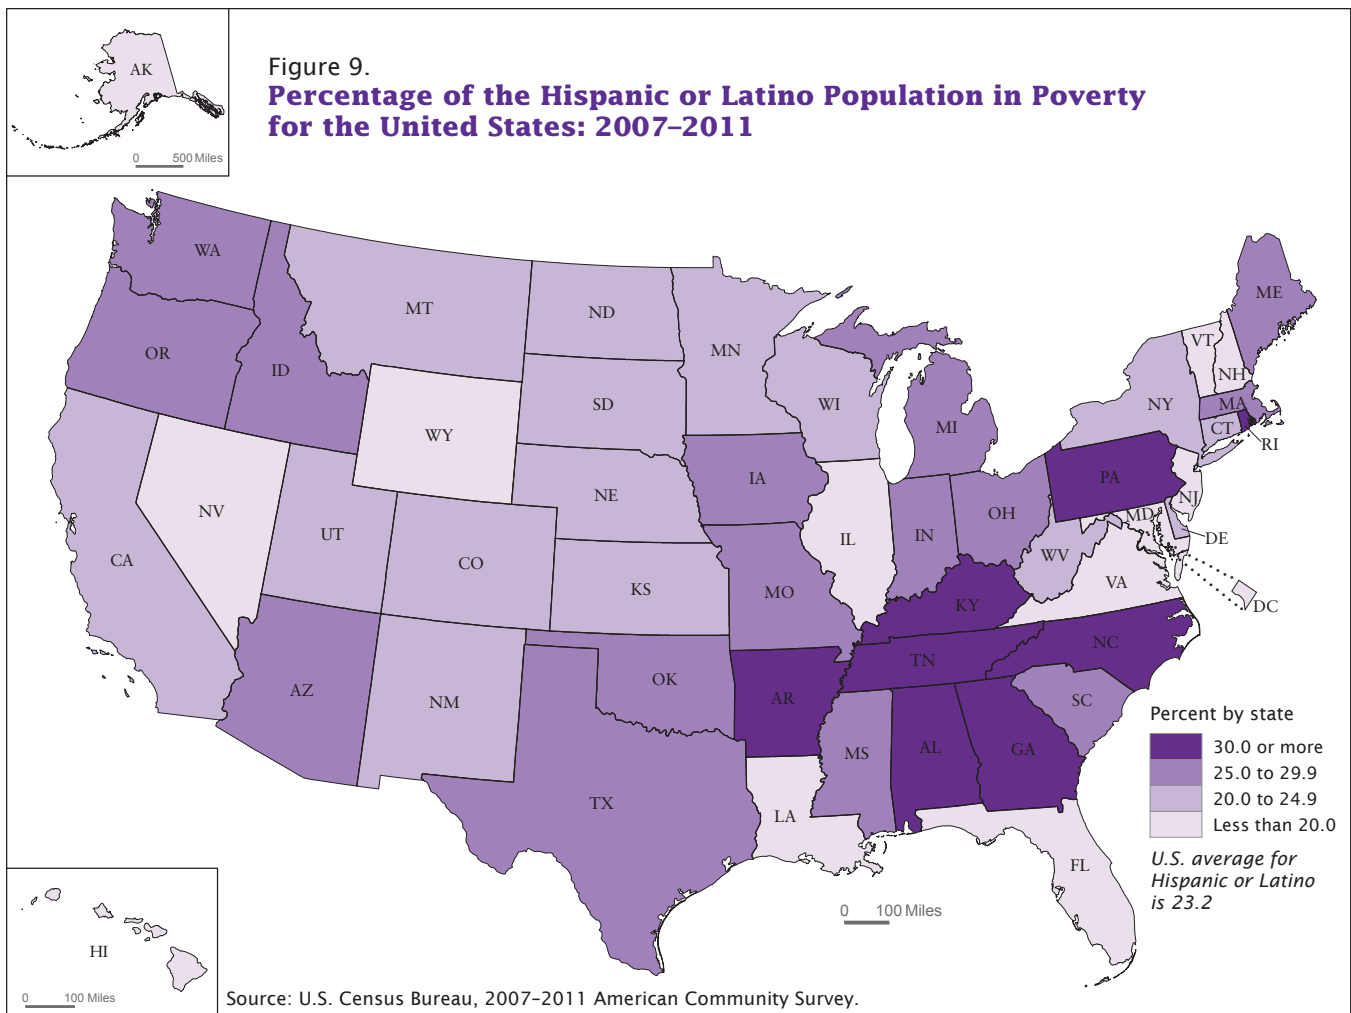

lowest level of poverty during the 2007 to 2011 period while Kentucky (31.5 percent), Pennsylvania (31.6 percent), and Tennessee (32.2 percent) were among the states with the highest levels (Table 8).¹⁴ Figure 9 shows the other states with poverty rates at 30.0 percent or higher for the Hispanic population (Alabama, Arkansas, Georgia, North Carolina, and Rhode Island).

¹⁴ Poverty rates for Hispanics in Kentucky, Pennsylvania, and Tennessee were not statistically different from one another.

CITIES

Poverty rates for selected detailed race and Hispanic groups by city or place are shown in Figures 10, 11, and 12.

Figure 10 shows that the poverty rate was about 30.0 percent or greater for the American Indian and Alaska Native population in 6 of the 20 places most populated by this group (Gallup, New Mexico; Minneapolis, Minnesota; Rapid City, South Dakota; Shiprock, New Mexico; Tucson, Arizona; and Zuni

Pueblo, New Mexico). The poverty rate in Rapid City, South Dakota (50.9 percent) for American Indians and Alaska Natives was around three times the rate in Anchorage, Alaska (16.6 percent).

Poverty rates for the Vietnamese population are shown in Figure 11. Fountain Valley, California (8.2 percent); Oklahoma City, Oklahoma (7.7 percent); and San Francisco, California (11.9 percent), had poverty rates lower than the

group's national rate (14.7 percent). By comparison, the poverty rate for Vietnamese in Boston, Massachusetts (35.8 percent), was around three times the U.S. rate for this group.

In cities or places with large populations of Dominicans, poverty rates for this group ranged from 43.2 percent to 10.0 percent (Figure 12). Poverty was around 30.0 percent or greater in 8 of the 20 places

most populated by Dominicans (Boston, Massachusetts; Lawrence, Massachusetts; Lynn, Massachusetts; New York, New York; Passaic, New Jersey; Philadelphia, Pennsylvania; Providence, Rhode Island; and Reading, Pennsylvania).

(For additional poverty rates by city or place for selected detailed race and Hispanic groups, please see the appendix tables.)

How Poverty Is Measured

Poverty status is determined by comparing annual income to a set of dollar values called poverty thresholds that vary by family size, number of children, and the age of the householder. If a family's before-tax money income is less than the dollar value of their threshold, then that family and every individual in it are considered to be in poverty. For people not living in families, poverty status is determined by comparing the individual's income to his or her poverty threshold.

The poverty thresholds are updated annually to allow for changes in the cost of living using the Consumer Price Index (CPI-U). They do not vary geographically.

The ACS is a continuous survey and people respond throughout the year. Since income is reported for the previous 12 months, the appropriate poverty threshold for each family is determined by multiplying the base-year poverty threshold (1982) by the average of monthly CPI-U values for the 12 months preceding the survey month.

For more information see "ACS Poverty Definition" and "How Poverty is Calculated in the ACS" at www.census.gov/hhes/www/poverty/methods/definitions.html.

Figure 11.

Poverty Rates for the Vietnamese Alone Population in the 20 U.S. Cities Most Populated by Vietnamese Alone: 2007–2011

(For information on confidentiality protection, sampling error, nonsampling error, and definitions, see www.census.gov/acs/www/)

Note: To illustrate the data available in the appendix tables of this report, selected groups with comparatively higher rates of poverty and geographic dispersion are highlighted in these figures.

Persons who report only one race among the six defined categories are referred to as the race-alone population, while persons who report more than one race category are referred to as the Two or More Races population. This figure shows data using the race-alone approach. Use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches.

What Is the American Community Survey?

The American Community Survey (ACS) is a nationwide survey designed to provide communities with reliable and timely demographic, social, economic, and housing data for the nation, states, congressional districts, counties, places, and other localities every year. It has an annual sample size of about 3.3 million addresses across the United States and Puerto Rico and includes both housing units and group quarters (e.g., nursing facilities and prisons). The ACS is conducted in every county throughout the nation, and every municipio in Puerto Rico, where it is called the Puerto Rico Community Survey. Beginning in 2006, ACS data for 2005 were released for geographic areas with populations of 65,000 and greater. For information on the ACS sample design and other topics, visit www.census.gov/acs/www.

SOURCE AND ACCURACY

The data presented in this report are based on the ACS sample interviewed between 2007 and 2011. The estimates based on this sample approximate the actual values and represent the entire household and group quarters population. Sampling error is the difference between an estimate based on a sample and the corresponding value that would be obtained if the estimate were based on the entire population (as from a census). Measures of the sampling errors are provided in the form of margins of error for all estimates included in this report. All comparative statements in this report have undergone statistical testing, and comparisons are significant at the 90 percent level unless otherwise noted. In addition to sampling error, nonsampling error may be introduced during any of the operations used to collect and process survey data such as editing, reviewing, or keying data from questionnaires. For more information on sampling and estimation methods, confidentiality protection, and sampling and nonsampling errors, please see the 2011 ACS Accuracy of the Data document located at www.census.gov/acs/www/Downloads/data_documentation/Accuracy/ACS_Accuracy_of_Data_2011.pdf.

Guatemalan	1,054,350	262,575	7,506	24.9	0.6
Salvadoran	1,708,491	323,317	8,870	18.9	0.5
Cuban	1,727,550	279,011	5,969	16.2	0.4
Dominican	1,387,724	364,523	6,591	26.3	0.5
Puerto Rican	4,466,054	1,142,216	13,907	25.6	0.3

¹ Poverty status is determined for individuals in housing units and noninstitutional group quarters. The poverty universe excludes children under age 15 who are not related to the householder, people living in institutional group quarters, and people living in college dormitories or military barracks.

² The Census Bureau does not advocate the use of the alone population over the alone-or-in-combination population or vice versa. The use of the alone population in sections of this brief does not imply that it is the preferred method of presenting or analyzing data. Data on race from the American Community Survey can be presented and discussed in a variety of ways. Hispanics and Latinos may be of any race. For more information see the 2010 Census Brief, Overview of Race and Hispanic Origin, at <www.census.gov/prod/cen2010/briefs/c2010br-02.pdf>.

³ Data are based on a sample and are subject to sampling variability. A margin of error is a measure of an estimate's variability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number when added to or subtracted from the estimate forms the 90 percent confidence interval.

⁴ Includes Other Micronesian (25,000), Other Pacific Islander not specified (17,000), Marshallese (17,000), Other Native Hawaiian (8,000), Other Pacific Islander (7,000), Palauan (6,000), Other Polynesian (5,000), Chuukese (2,000), Pohnpeian (1,000), Tahitian (1,000), and other detailed groups.

¹ Poverty status is determined for individuals in housing units and noninstitutional group quarters. The poverty universe excludes children under age 15 who are not related to the householder, people living in institutional group quarters, and people living in college dormitories or military barracks.

² Persons who report only one race among the six defined categories are referred to as the race-alone population, while persons who report more than one race category are referred to as the Two or More Races population. This table shows data using the race-alone approach. Use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches.

³ Data are based on a sample and are subject to sampling variability. A margin of error is a measure of an estimate's variability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number when added to or subtracted from the estimate forms the 90 percent confidence interval.

West Virginia	11,159	1,932	369	17.3	3.3
Wisconsin	122,474	21,082	1,549	17.2	1.3
Wyoming	3,854	460	158	11.9	4.0

¹ Poverty status is determined for individuals in housing units and noninstitutional group quarters. The poverty universe excludes children under age 15 who are not related to the householder, people living in institutional group quarters, and people living in college dormitories or military barracks.² Persons who report only one race among the six defined categories are referred to as the race-alone population, while persons who report more than one race category are referred to as the Two or More Races population. This table shows data using the race-alone approach. Use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches.³ Data are based on a sample and are subject to sampling variability. A margin of error is a measure of an estimate's variability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number when added to or subtracted from the estimate forms the 90 percent confidence interval.

Wyoming	45,111	7,396	901	16.4	2.0

¹ Poverty status is determined for individuals in housing units and noninstitutional group quarters. The poverty universe excludes children under age 15 who are not related to the householder, people living in institutional group quarters, and people living in college dormitories or military barracks.

² Because Hispanics may be any race, data in this report for Hispanics overlap with data for race groups. Data users should exercise caution when interpreting aggregate results for race groups or for the Hispanic population because these populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and recency of immigration. For more information see the 2010 Census Brief, Overview of Race and Hispanic Origin, at <www.census.gov/prod/cen2010/briefs/c2010br-02.pdf>.

³ Data are based on a sample and are subject to sampling variability. A margin of error is a measure of an estimate's variability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number when added to or subtracted from the estimate forms the 90 percent confidence interval.
