MAP SHOWING THE DISTRIBUTION OF WEALTH.

Compiled from the Tables of True Valuation, Ninth Census of the United States, 1870.

By FRANCIS AMELAKI.

Explanations.
The Blue lines indicate the boundaries of ranges of population.
The figures in blue (1 to 4) express the number of inhabitants in each range.
The shaded lines in blue indicate the outside limit of population of 500 miles radius around the cities.
The shading works from the city outward in the following order:
1. Dark blue.
2. Light blue.
3. Yellow.
4. Red.
The unshaded spaces between the shaded portions and for the limits of population are shaded. The unshaded spaces are colored to show the counties involved in the quarterns of settlement.
