MAP
SHOWING THE PROPORTION OF DEATHS FROM
CONSUMPTION
TO DEATHS FROM ALL CAUSES
compiled from the Returns of Mortality at the Ninth Census
OF THE UNITED STATES 1870
BY
FRANCIS W. WALKER,

Explanation:
The Blue lines indicate the route taken by the procession. The scale to the right is in miles and represents the number of inhabitants. The red lines represent the proportion of deaths from consumption to deaths from all causes. The scale to the right indicates the proportion of deaths from consumption to deaths from all causes. For instance, a proportion of 0.01 indicates that 1 death from consumption occurred for every 100 deaths from all causes.
