MAP
SHOWING THE PROPORTION OF DEATHS FROM
MALARIAL DISEASES
TO DEATHS FROM ALL CAUSES
compiled from the Returns of Mortality at the Ninth Census
OF THE UNITED STATES 1850
BY
FRANCIS M. WALKER

Explanation:
The Blue lines indicate the inhabited ranges of Population.
The figures in blue 1, 2, 3, &c. in red - express the number of inhabitants in the State with equal within each group.
The shaded lines in blue indicate the central points of a population.
The shaded lines in blue include the central points of a population, which have proportions of less than 2 to the square mile.
The greatest interval allowed between the shaded points, and the line of the population, are double the square root of ten thousand, in the former returns, except in the quarters of millions.
