MAP SHOWING THE PROPORTION OF DEATHS FROM ENTERIC, CEREBRO-SPINAL, AND TYPHUS FEVERS TO DEATHS FROM ALL CAUSES computed from the Returns of Mortality at the Ninth Census of the United States, 1870 by Francis A. Walker.

Explanatory Notes:
The blue lines indicate the boundaries of States or Provinces.
The blue dots represent points of population.
The red areas show the proportion of deaths from Enteric, Cerebro-Spinal, and Typhus FEVERS to all deaths.
The lighter red areas represent a lower proportion of deaths from these diseases, while the darker red areas indicate a higher proportion.

Explanation of Colors:
- Light red: Less than 25% of deaths from Enteric, Cerebro-Spinal, and Typhus FEVERS
- Medium red: 25% to 50% of deaths from Enteric, Cerebro-Spinal, and Typhus FEVERS
- Dark red: More than 50% of deaths from Enteric, Cerebro-Spinal, and Typhus FEVERS
