

MAINE.

Table 1 shows the manufacturing and mechanical industries of the state of Maine as returned at the censuses of 1850 to 1900, inclusive, with the percentages of increase for each decade. This table also presents the average number of wage-earners employed by manufacturing estab-

lishments, in comparison with the total population of the state, and the value of the land and buildings owned and reported by manufacturers as capital, in comparison with the assessed value of all real estate and improvements.

TABLE 1.—COMPARATIVE SUMMARY, 1850 TO 1900, WITH PER CENT OF INCREASE FOR EACH DECADE.

	DATE OF CENSUS.						PER CENT OF INCREASE.				
	1900	1890	1880	1870	1860	1850	1890 to 1900	1880 to 1890	1870 to 1880	1860 to 1870	1850 to 1860
Number of establishments	6,702	5,010	4,481	5,550	8,810	3,974	33.8	11.8	119.3	45.7	14.1
Capital	\$122,918,826	\$80,419,809	\$49,988,171	\$39,796,190	\$22,014,020	\$14,699,152	52.8	60.9	25.6	30.5	50.0
Salaried officials, clerks, etc., number	3,329	25,406	(³)	(³)	(³)	(³)	138.4				
Salaries	\$3,171,333	\$3,563,635	(³)	(³)	(³)	(³)	111.0				
Wage-earners, average number	74,816	70,374	52,954	49,180	34,619	28,020	6.3	32.9	7.7	42.1	23.6
Total wages	\$28,527,849	\$22,962,582	\$13,623,318	\$14,282,205	\$8,868,691	\$7,485,588	24.2	68.6	14.6	70.7	11.8
Men, 16 years and over	53,701	46,881	35,431	34,310	24,827	21,853	14.5	32.8	8.3	33.2	18.6
Wages	\$23,334,885	\$17,827,273	(³)	(³)	(³)	(³)	31.2				
Women, 16 years and over	18,913	21,051	13,777	13,448	9,792	6,167	110.2	52.8	2.4	37.3	58.8

Children, under 16 years	2,202	2,442	3,746	1,422	(³)	(³)	19.8	134.8	163.4		
Wages	\$307,843	\$244,249	(³)	(³)	(³)	(³)	26.0				
Miscellaneous expenses	\$7,774,216	\$5,394,694	(⁴)	(⁴)	(⁴)	(⁴)	44.1				
Cost of materials used	\$68,863,408	\$51,520,589	\$51,120,708	\$49,379,757	\$21,553,066	\$13,553,144	33.7	0.8	8.5	129.1	59.0
Value of products, including custom work and repairing	\$127,361,485	\$95,689,500	\$79,829,798	\$79,497,521	\$38,193,254	\$24,661,057	33.1	19.9	0.4	108.1	54.9
Total population	694,466	661,086	648,936	626,915	628,279	583,169	5.0	1.9	8.5	10.2	7.7
Wage-earners engaged in manufactures	74,816	70,374	52,954	49,180	34,619	28,020	6.3	32.9	7.7	42.1	23.6
Per cent of total population	10.8	10.6	8.2	7.8	5.5	4.8					
Assessed value of real estate	\$268,434,909	\$233,946,082	\$178,856,242	\$134,580,157	\$86,717,716	\$64,336,119	14.7	31.6	29.2	55.2	34.8
Value of land and buildings invested in manufactures ⁵	\$31,266,656	\$19,237,679	(³)	(³)	(³)	(³)	62.5				
Per cent of assessed value	11.6	8.2									

¹ Decrease.

² Includes proprietors and firm members, with their salaries; number only reported in 1900. (See Table 7.)

³ Not reported separately.

⁴ Not reported.

⁵ As given for the year 1900 in Dana's supplement, "State and City," to the Commercial and Financial Chronicle, under date of April 13, 1901.

⁶ Does not include value of rented property.

Table 1 shows that there has been a marked growth in the manufacturing and mechanical industries of Maine during the half century. The population during these years increased from 583,169 to 694,466, or 19.1 per cent, while the average number of wage-earners employed in manufacturing establishments increased from 28,020 to 74,816, or 167 per cent, embracing, in 1900, 10.8 per cent of the entire population, compared with 4.8 per cent in 1850. Probably the best indication of the importance of the wage-earning class is afforded by the greatest number employed at any one time during the year. In 1900 this was 110,243, or 15.9 per cent of the total population of the state.

The decade from 1890 to 1900 shows an increase in the value of products of 33.1 per cent, which is greater than for any other decade since 1870. The increase in the value of products from 1870 to 1880, four-tenths of 1 per cent, was really much greater. The values for 1870 were expressed in a currency which was at a discount in gold, and should be reduced by about one-fifth for purposes of comparison with other census years. This also explains the decrease of 4.6 per cent shown in wages during the same decade.

The extensive waterpower of Maine has been an important element contributing to this growth in manufacturing.

The 1,620 lakes of the state, having a total area of 2,300 square miles, and located in many cases near the heads of rivers, are valuable reservoirs of manufacturing power. The total available waterpower has been estimated at between one and two million horsepower.¹ Excellent facilities for commerce are afforded by the rivers, harbors, and railroads. Of the principal rivers the Piscataqua, Sheepscott, and St. Croix admit vessels of 2,000 tons for a few miles, while the Kennebec is navigable for coast vessels to Augusta, and the Penobscot to Bangor.² Numerous bays and harbors along the coast have a depth of water sufficient to float the largest ships and afford shelter from storms throughout the year. There are 1,919 miles of railroad in the state, the Maine Central entering all but one of the 16 counties.

Table 2 divides the industries of the state between the hand trades and the manufactures proper. This table also gives the statistics for a governmental establishment, eleemosynary and penal institutions, and establishments with a product of less than \$500; these were not reported at previous censuses, and therefore are omitted from the other tables and their use confined to Table 2.

¹ The Waterpower of Maine, by Walter Wells, pages 8, 28, and 29.

² Gazetteer of Maine, by G. J. Varney, page 11.

TABLE 2.—SUMMARY FOR ALL ESTABLISHMENTS.

CLASSES.	Number of establishments.	Capital.	Proprietors and firm members.	WAGE-EARNERS.		Miscellaneous expenses.	COST OF MATERIALS USED.				Value of products, including custom work and repairing.
				Average number.	Total wages.		Total.	Purchased in raw state.	Purchased in partially manufactured form.	Fuel, freight, etc.	
Total	8,356	\$129,922,852	9,226	75,675	\$29,020,183	\$7,801,191	\$69,294,637	\$22,112,832	\$48,528,487	\$3,653,818	\$128,617,181
Hand trades ¹	2,895	4,062,844	3,187	6,692	3,105,667	553,868	4,995,882	72,487	4,733,711	189,234	11,686,966
Governmental establishment	1	6,082,965		559	470,248		205,012		194,454	10,558	764,022
Eleemosynary and penal institutions	4	314,836		5	2,750	668	83,550	21,000	61,015	6,544	101,497
Establishments with a product of less than \$500	1,640	600,225	1,725	295	19,286	26,307	187,658	15,169	122,489		390,177
All other establishments	3,807	118,250,482	4,314	63,124	25,422,182	7,220,348	63,868,026	22,004,226	38,416,818	3,416,982	115,674,519

¹ Includes bicycle and tricycle repairing, 57; blacksmithing and wheelwrighting, 973; boots and shoes, custom work and repairing, 213; carpentering, 277; clothing, men's, custom work and repairing, 173; clothing, women's, dressmaking, 103; dyeing and cleaning, 11; furniture, cabinetmaking, repairing, and upholstering, 83; lock and gun smithing, 21; masonry, brick and stone, 91; millinery, custom work, 270; painting, house, sign, etc., 247; plastering and stuccowork, 11; plumbing, and gas and steam fitting, 112; taxidermy, 7; typewriter repairing, 1; watch, clock, and jewelry repairing, 180.

Of the 8,356 establishments of all classes, shown in this table, 4,544, or 54.4 per cent, were small shops included in the groups of "hand trades" and "establishments with a product of less than \$500." The value of the products of these establishments, consisting principally of the sums received for custom work and repairing, amounted to

\$12,077,143, or only 9.4 per cent of the total products of the state.

In addition to the 8,356 active establishments in the state during the census year, with a capital of \$129,922,852, shown in Table 2, there were 67 idle establishments, with a capital of \$859,049, divided as follows:

INDUSTRIES.	Number of idle establishments.	Capital.	INDUSTRIES.	Number of idle establishments.	Capital.
Brick and tile	11	\$39,543	Lumber and timber products	11	\$59,460
Cheese, butter, and condensed milk, factory product	3	53,482	Marble and stone work	3	18,525
Felt goods	1	60,000	Soap and candles	1	15,000
Fertilizers	2	189,960	Starch	1	5,000
Fish, canning and preserving	14	11,055	Woolen goods	1	185,000
Flouring and grist mill products	3	4,500	Worsted goods	4	81,000
Iron and steel	1	75,000	All other industries	10	15,924
Leather, tanned, curried, and finished	1	12,000			

TABLE 3.—COMPARATIVE SUMMARY OF TEN LEADING INDUSTRIES.

INDUSTRIES.	Year.	Number of establishments.	Capital.	WAGE-EARNERS.		Miscellaneous expenses.	Cost of materials used.	Value of products, including custom work and repairing.
				Average number.	Total wages.			
Total for selected industries for state	1900	1,691	\$86,947,527	49,809	\$15,656,169	\$5,142,412	\$41,087,252	\$78,699,654

Wool manufactures	1900	81	14,512,120	7,324	2,762,564	860,447	3,142,820	18,744,125
	1890	78	9,456,830	5,087	1,824,670	593,305	5,675,347	8,737,633

The 10 leading industries of the state in 1900, as shown in Table 3, embraced 1,691 establishments, or 25.2 per cent of the total number in the state; used a capital of \$86,947,527, or 70.7 per cent of the total; gave employment to 43,899 wage-earners, or 58.7 per cent of the total number; and paid \$15,656,169, or 54.9 per cent of the total wages. The value of their products was \$73,699,654, or 57.9 per cent of the total. In the discussion of Table 3, which follows, these industries are ranked with reference to the value of their products.

Table 3 shows that the manufacture of cotton goods is the most important industry in the state. The 15 establishments reported in 1900 gave employment to 13,723 wage-earners, or 18.3 per cent of the wage-earners in the state, and their products were valued at \$14,631,086, or 11.5 per cent of the total value of the products of the state. In 1890 there were 23 establishments, with 13,912 wage-earners, and products valued at \$15,316,909. The decrease in the value of products during the decade was \$685,823, or 4.5 per cent. The waterpower of Maine early attracted the attention of manufacturers of cotton goods. One of the pioneer mills of the state was established at Brunswick in 1809, another at Wilton in 1810, and a third at Gardiner in 1811.¹ Factories were erected at Saco in 1831, at Lewiston in 1844,² and at Biddeford in 1845, while in later years Augusta and Waterville secured large plants. Lewiston is, however, the chief center of the industry, while the twin cities of Biddeford and Saco rank next in importance. At present the cotton mills of Maine are all west of the Kennebec River. They are located, without exception, at the falls of large rivers, and are operated by waterpower.

The wool manufacture in all its branches, except hosiery and knit goods, ranks second among the industries of the state, with 81 establishments, 7,324 wage-earners, and products valued at \$13,744,126. In 1890 there were 78 establishments, with 5,067 wage-earners, and products valued at \$8,737,653. The increase in the value of products during the decade was \$5,006,473, or 57.8 per cent. Wool manufactures in Maine date back to a period some years prior to the introduction of cotton mills. In 1820 there were 6 small woolen mills in the state,³ one of the earliest having been established in that year at Dexter, Penobscot county, by Amos and Jeremiah Abbott, who removed there from Andover, Mass.⁴ They purchased the small wool-carding mills already built at Dexter, and a few years later built the present woolen mill. This was, it is claimed, the first firm in Maine to ship woolen cloth out of the state. Owing to the generally favorable conditions for its growth and development, the manufacture of woolen goods is now carried on in nearly every county in the state, water being used for power. The town of Sanford,

in the southwestern part of Maine, not far from the New Hampshire line, is the seat of an important branch of this industry, the manufacture of carriage robes, mohair plush, and horse blankets.

There were 838 establishments engaged in the manufacture of lumber and timber products in 1900, the industry third in rank, with 6,834 wage-earners, and products valued at \$13,489,401. In 1890 there were 894 establishments, with 11,540 wage-earners, and products valued at \$11,849,654. The increase in the value of products during the decade was \$1,639,747, or 13.8 per cent. Lumbering was begun at an early period in Maine, and has continued to be a leading industry. Owing to the scarcity of pine, which originally was the most important timber cut, spruce has now taken the leading place. Hard woods are cut in considerable quantities. The first sawmill in Maine was erected at South Berwick about 1634, and fifty years later the number in the state had increased to 24.⁵ Many changes in methods have been introduced during the history of the industry. Dams and canals have been built, steamers have been placed on the lakes to facilitate log driving, and in one instance, at Northwest Carry, Moosehead Lake, a log sluice has been constructed, at large expense, to convey the logs overland from the west branch of the Penobscot River to Moosehead waters, the source of the Kennebec. The primitive mills have given place to great plants, many of them operated by steam power, particularly those located on tide waters. Maine's wealth of hard woods, already receiving attention, is destined to be much more appreciated. Birch is in great demand for spool wood, both for local manufacture and for shipment to Scotland, while beech is called for to be converted into orange shooks for Florida and the Mediterranean ports. General woodworking plants have been built in many parts of the state, especially at points accessible to the raw material.

There were 35 establishments engaged in the manufacture of paper and wood pulp in 1900, with 4,851 wage-earners, and products valued at \$13,223,275. In 1890 there were 17 establishments, with 1,509 wage-earners, and products valued at \$3,281,051. The increase in the value of products was \$9,942,224, or 303 per cent. Paper manufacturing has been carried on in Maine in a small way since 1735,⁶ but it is only within recent years that it has attained importance. The early mills were located, first at Westbrook and later at Mechanic Falls, on the Little Androscoggin; at Gardiner and Skowhegan, on the Kennebec; and at Hampden and Belfast, in eastern Maine.⁷ With the discovery of wood pulp as a material for paper manufacture, great changes were brought about. One of the pioneer pulp mills in the state was erected at Brunswick in 1870.

⁷ Report of the Maine Bureau of Industrial and Labor Statistics, 1895, page 105.

Since that date numerous and costly plants have been built for the manufacture of ground wood, soda, and sulphite pulp. These mills are situated chiefly along the three principal rivers of the state, the Androscoggin, Kennebec, and Penobscot. Recently, immense plants have been constructed at Millinocket on the Penobscot waters, at Madison on the Kennebec River, and at Rumford Falls on the Androscoggin River. Spruce is used generally in the manufacture of wood pulp. A few mills use also small quantities of poplar, fir, pine, and hemlock, while 3 plants use poplar only.

There were 117 establishments engaged in the canning and preserving of fish in 1900, with 5,567 wage-earners, and products valued at \$4,779,733. In 1890, 35 establishments were reported, with 2,342 wage-earners, and products valued at \$1,660,881. The increase in the value of products during the decade was \$3,118,852, or 187.8 per cent. A leading branch of this industry is the canning of small herrings under the name of "sardines." Imports of "sardines" of this sort in 1872 suggested the use of Eastport herrings for the same purpose, and experiments were at once undertaken.¹ The Eastport product was found to be superior to the imported article, and an important industry was thus established in that city in 1875.² During the year 1 cannery was operated. In each of the four succeeding years, 1 factory was added to the number, so that, in 1879, 5 establishments were in operation.³ From that time the industry grew rapidly until, in 1886, there were 45 factories in the state, of which number 32 bordered on Passamaquoddy Bay and its tributary waters, and 13 were located along the coast from Cutler westward.³ At Eastport and Lubec the "sardine" industry, during the first ten years of its existence, increased to such an extent as to outrank in importance, in that locality, all other branches of business.

There were 227 establishments engaged in flour and grist milling in 1900, with 192 wage-earners, and products valued at \$3,399,832. In 1890, 210 establishments were reported, with 262 wage-earners, and products valued at \$3,254,690. The increase in the value of products during the decade was \$145,142, or 4.5 per cent. From the early settlement of the state, mills have been in use for grinding corn, wheat, and other grain. As the people for many years depended for a livelihood largely on the products of their farms—principally corn and grain—gristmills were a necessity. Small streams affording waterpower were abundant in every section of the state, and gristmills were erected in every considerable settlement. At first these mills were crude, the millstones being cut from the rock in which the country abounded, and serving only to grind the grain into meal; but, as time advanced, improved stones were introduced and much excellent flour was made for home consumption. For several years the state paid a small bounty on every bushel of wheat raised, and in this way greatly stimulated the growth of the cereal. With

very few exceptions, the early gristmills of Maine did custom grinding only, but later an extensive wholesale trade grew up in the larger cities, and mills of greater capacity were erected at these central points. As a result, corn meal, instead of whole corn, is now largely distributed to retailers throughout the state. Within a few years several large flouring plants, using the roller process, have been erected in Aroostook county; in these mills large quantities of native wheat are converted into flour. This has greatly stimulated the growth of wheat in the fertile valley of the Aroostook.

There were 112 establishments engaged in the manufacture of foundry and machine shop products in 1900, with 2,143 wage-earners, and products valued at \$3,298,706. In 1890, 82 establishments were reported, with 1,768 wage-earners, and products valued at \$2,628,572. The increase in the value of products during the decade was \$670,134, or 25.5 per cent. The erection of lumber mills in Maine early led to the construction of foundries and machine shops for the manufacture of shafting, gears, and other mill machinery. As shipbuilding and cotton and woolen manufacture developed, these foundries and shops were also called upon to manufacture the additional ironwork and the special machinery required. But in recent years there has been a change in the custom of all kinds of large manufacturing plants, most of which now have their own machine shops with from one to a dozen employees. This has had a tendency to reduce the number and importance of the general foundry and machine shops. Portland, Bangor, and Lewiston are now the principal points where these are located. One of the early stove foundries in Maine was established at Hampden about the year 1835.

There were 115 establishments engaged in wooden ship and boat building in 1900, with 1,369 wage-earners, and products valued at \$2,491,765. In 1890, 85 establishments were reported, with 1,450 wage-earners, and products valued at \$2,818,565. The decrease in the value of products during the decade was \$326,800, or 11.6 per cent. As far back as 1608, the "Virginia" was built by the Popham colony near the mouth of the Kennebec;⁴ and from that time to the present, shipbuilding has been one of the important occupations of this region. In early days, shipyards were established at many points on all the principal rivers and along the coast, and Maine became the leading shipbuilding state in the United States, building more than half of all the sea-going vessels of the nation.⁵ Of late years there has been a decline in the industry, and the business is now carried on at but few points. Bath, on the Kennebec, is much the most important center, but ship and boat building is also carried on to a considerable extent at Phippsburg, Waldoboro, Thomaston, Rockland, Camden, Rockport, Belfast, Bucksport, Millbridge, and Machias. A notable feature of modern marine architecture is the greater size of the vessels in comparison with those of early days. Two and three-masted schooners

⁴ History of Maine, by W. D. Williamson, vol. 1, page 202.

⁵ Our Merchant Marine, 1872, by N. G. Hitchborn, page 15.

have quite largely given place to the large four, five, and six-masted vessels. Of late years the building of steel vessels, especially at the Bath Iron Works, the pioneer steel ship-building plant of the state, has become quite an important branch of the industry. Several Government cruisers, as well as merchant steamships, have been built at Bath.

There were 31 establishments engaged in the tanning, currying, and finishing of leather in 1900, with 587 wage-earners, and products valued at \$2,451,713. In 1890, 51 establishments were reported, with 852 wage-earners, and products valued at \$3,863,672. The decrease in the value of products during the decade was \$911,959, or 27.1 per cent. The early tanneries of Maine were very small, only a few hides being purchased, for a considerable part of the year's output was custom work. Home slaughtered hides and skins were tanned for home use, the shoemaker afterward making his rounds from house to house among the farmers, to work up stocks of finished leather into a year's supply of footwear for the family. There were 200 tanneries in Maine in 1810, with an annual average of 275 hides and skins tanned, and an average product valued at \$1,156. In 1840, 395 tanneries were reported, while the total number of hands employed, 454, averaged less than 2 to an establishment. York county alone contained 101 tanneries, with but 102 hands employed. Between 1840 and 1860 several tanneries of considerable size were built,

and the industry received a further stimulus through the demands of 1861 and the time immediately following, so that during the next fifteen years many large sole-leather plants were established in the eastern part of the state. Hemlock bark has always been the principal material used for tanning purposes in the state, and it is to the increasing scarcity of this bark that the decline in the industry since 1870 must be attributed.

There were 120 establishments engaged in the printing and publishing of newspapers and periodicals in 1900, with 1,309 wage-earners, and products valued at \$2,190,017. In 1890, 105 establishments were reported, with 949 wage-earners, and products valued at \$1,719,477. The increase in the value of products during the decade was \$470,540, or 27.4 per cent. The first newspaper in Maine, the Falmouth Gazette and Weekly Advertiser, was founded at Falmouth, now Portland, January 1, 1785, and has continued, under various names, to the present time. Nearly every considerable town in the state now has its local newspaper.

URBAN MANUFACTURES.

Table 4 shows the totals for the manufacturing and mechanical industries of the cities of Lewiston and Portland as returned at the censuses of 1890 and 1900, with the percentages of increase.

TABLE 4.—COMPARATIVE SUMMARY, LEWISTON AND PORTLAND, 1890 AND 1900, WITH PER CENT OF INCREASE.

	1890	17.5	18.9	17.6	21.0	22.6	21.6	21.4

¹ Decrease.

It appears from Table 4 that the number of establishments in these 2 cities, taken together, increased during the decade from 876 to 921, or 5.1 per cent. The average number of wage-earners increased from 12,414 to 12,858, or 3.6 per cent, while the value of products decreased from \$20,445,343 to \$20,021,555, or 2.1 per cent. The percentage of increase in the number of establishments and in the average number of wage-earners was smaller in these 2 cities than in the state as a whole, while the decrease in the value of products stands in contrast to an increase in the state as a whole. In Portland, the leading manufacturing city of the state, the number of establishments decreased during the decade from 602 to 639, or 3.5 per

cent, while the average number of wage-earners increased from 5,338 to 5,699, or 6.8 per cent, and the value of products increased from \$11,371,487 to \$11,440,201, or six-tenths of 1 per cent. The number of establishments, number of wage-earners, and value of products for this city constituted 9.5, 7.6, and 9 per cent, respectively, of the totals for the entire state.

Table 5 presents the totals for the manufacturing industries of the 43 cities and towns withdrawn from the enumerators, places them in comparison with the totals for the entire state and the state exclusive of these cities and towns, and shows their rank in population and in value of products.

¹ Less than one-tenth of 1 per cent.

Of the 6,702 establishments in the state, 3,594, or 53.6 per cent, were located in these 43 cities and towns. They furnished employment to 51,965 wage-earners, or 69.5 per cent of the total number, and the value of their products, \$85,449,012, formed 67.1 per cent of the total for the state.

Table 6 shows the totals for the state by counties.

Table 7 shows the totals for the state by specified industries.

Table 8 shows the totals for the cities of Bangor, Lewiston, and Portland by specified industries.

Table 9 shows the totals for the cities and towns withdrawn from the enumerators, exclusive of those shown in Table 8.

MARYLAND.

Table 1 shows the manufacturing and mechanical industries of the state of Maryland as returned at the censuses of 1850 to 1900, inclusive, with the percentages of increase for each decade. This table also presents the average number of wage-earners employed by manufacturing establish-

ments, in comparison with the total population of the state, and the value of the land and buildings owned and reported by manufacturers as capital, in comparison with the assessed value of all real estate and improvements.

TABLE 1.—COMPARATIVE SUMMARY, 1850 TO 1900, WITH PER CENT OF INCREASE FOR EACH DECADE.

	DATE OF CENSUS.						PER CENT OF INCREASE.				
	1900	1890	1880	1870	1860	1850	1890 to 1900	1880 to 1890	1870 to 1880	1860 to 1870	1850 to 1860

Value of land and buildings invested in manufactures ⁵	\$45,704,854	\$31,268,516	(⁶)	(⁶)	(⁶)	(⁶)	46.2				
Per cent of assessed value	7.4	7.6									

¹ Decrease.

² Includes proprietors and firm members, with their salaries; number only reported in 1900. (See Table 7.)

³ Not reported separately.

⁴ Not reported.

⁵ As given in the Maryland Manual for 1900.

⁶ Does not include value of rented property.

Although Maryland is not preeminently a manufacturing state, Table 1 shows that there has been a steady growth in its manufacturing and mechanical industries during the half century. The population during these years increased from 583,034 to 1,188,044, or 103.8 per cent, while the average number of wage-earners employed in manufacturing establishments increased from 30,212 to 108,325, or 258.5 per cent, embracing, in 1900, 9.1 per cent of the entire population, compared with 5.2 per cent in 1850. Probably the best indication of the importance of the wage-earning class is afforded by the greatest number employed at any one time during the year. In 1900

this was 149,069, or 12.5 per cent of the total population of the state. The industries of the province of Maryland were localized largely in and near the city of Baltimore, which was founded in 1729, and the same localization is shown at the present census.

Table 2 divides the industries of the state between the hand trades and the manufactures proper. This table also gives the statistics for a governmental establishment, eleemosynary and penal institutions, and establishments with a product of less than \$500; these were not reported at previous censuses, and therefore are omitted from the other tables and their use confined to Table 2.

STATISTICS OF MANUFACTURES.

TABLE 2.—SUMMARY FOR ALL ESTABLISHMENTS.

CLASSES.	Number of establishments.	Capital.	Proprietors and firm members.	WAGE-EARNERS.		Miscellaneous expenses.	COST OF MATERIALS USED.				Value of products, including custom work and repairing.
				Average number.	Total wages.		Total.	Purchased in raw state.	Purchased in partially manufactured form.	Fuel, freight, etc.	
Total	11,528	\$164,147,926	13,033	108,851	\$33,893,476	\$17,239,196	\$144,667,911	\$36,474,217	\$103,716,326	\$4,477,368	\$243,303,056
Hand trades ¹	4,549	9,020,693	4,920	11,275	5,125,026	2,231,748	9,645,423	101,225	9,418,526	125,670	22,529,232
Governmental establishment	1	169,100		13	4,689		8,463		7,763	700	13,632
Eleemosynary and penal institutions	6	280,978		270	43,402	17,142	111,131	30,152	75,273	5,706	215,293
Establishments with a product of less than \$500	1,642	550,593	1,910	243	11,884	62,431	150,637	13,963	136,498	176	521,121
All other establishments	5,330	154,126,567	6,203	97,050	33,023,525	14,977,875	134,752,257	36,328,877	91,078,266	4,345,114	220,023,758

¹ Includes bicycle and tricycle repairing, 70; blacksmithing and wheelwrighting, 877; boots and shoes, custom work and repairing, 719; carpentering, 393; clothing, men's, custom work and repairing, 408; clothing, women's, dressmaking, 583; dyeing and cleaning, 58; furniture, cabinetmaking, repairing, and upholstering, 136; lock and gun smithing, 59; masonry, brick and stone, 106; millinery, custom work, 235; painting, house, sign, etc., 308; paper hanging, 107; plastering and stuccowork, 46; plumbing, and gas and steam fitting, 245; sewing machine repairing, 11; watch, clock, and jewelry repairing, 188.

Of the 11,528 establishments of all classes, shown in this table, 6,191, or 53.7 per cent, were small shops included in the groups of "hand trades" and "establishments with a product of less than \$500." The value of the products of these establishments, consisting principally of the sums received for custom work and repairing, amounted to

\$23,050,353, or only 9.5 per cent of the total products of the state.

In addition to the 11,528 active establishments in the state during the census year, with a capital of \$164,147,926, shown in Table 2, there were 37 idle establishments, with a capital of \$1,226,058, divided as follows:

INDUSTRIES.	Number of idle establishments.	Capital.	INDUSTRIES.	Number of idle establishments.	Capital.
Ammunition	1	\$142,628	Lumber and timber products	10	\$8,975
Dye stuffs and extracts	1	10,965	Paper and wood pulp	2	88,000
Flouring and grist mill products	3	12,405	Pottery, terra cotta, and fire-clay products	2	189,000
Iron and steel	3	247,934	Sugar and molasses, refining	1	75,000
Leather, tanned, curried, and finished	1	8,750	Woolen goods	1	10,000
Liquors, distilled	3	110,000	All other industries	7	16,401
Liquors, malt	2	410,000			

TABLE 3.—COMPARATIVE SUMMARY OF FIFTEEN LEADING INDUSTRIES.

¹ Not separately reported in 1890.

The 15 leading industries of the state in 1900, as shown in Table 3, embraced 2,015 establishments, or 20.4 per cent of the total number in the state; used a capital of \$62,283,110, or 38.2 per cent of the total; gave employment to 46,930 wage-earners, or 43.3 per cent of the total number; and paid \$15,688,630, or 40.5 per cent of the total wages. The value of their products was \$103,471,334, or 42.7 per cent of the total. In the discussion of Table 3, which follows, these industries are ranked with reference to the value of their products.

Table 3 shows that the factory manufacture of men's clothing is the most important industry in the state. The 139 establishments reported in 1900 gave employment to 9,725 wage-earners, or 9 per cent of the wage-earners employed in the state, and their products were valued at \$17,327,825, or 7.1 per cent of the total value of the products of the state. In 1890 there were 125 establishments, 12,700 wage-earners, and products valued at \$15,032,924. The increase in the value of products during the decade was \$2,294,901, or 15.3 per cent.

There were 271 establishments engaged in 1900 in the canning and preserving of fruits and vegetables, the industry second in rank, with 7,505 wage-earners, and products valued at \$11,996,245. In 1890 there were 197 establishments, with 13,043 wage-earners, and products valued at \$7,196,109. The increase in the value of products during the decade was \$4,800,136, or 66.7 per cent. The reduced number of employees is only apparent, the method of computation adopted at this census giving the average number for the entire year. The canning of fruits and vegetables is an

industry restricted to a few months in the year; and during this period the highest number of employees in the industry in Maryland reached 22,907.

There were 9 establishments engaged in 1900 in the manufacture of iron and steel, the industry third in rank, with 2,138 wage-earners, and products valued at \$8,739,405. In 1890 there were 10 establishments, with 1,247 wage-earners, and products valued at \$2,869,208. The increase in the value of products during the decade was \$5,870,197, or 204.6 per cent. Iron ore was smelted in Maryland on the lower Patuxent as early as 1649, and the industry was thoroughly established by 1717, small quantities of wrought iron being exported from the colony.¹ Small furnaces were built along a belt of ores in Prince George, Howard, Baltimore, Harford, and Cecil counties, and produced charcoal pig iron of a high grade. One of these plants, the Principio Furnaces, manufactured cannon, cannon balls, and hardware for the United States Government during the War of 1812.² From these older works developed rolling mills, such as the one at Mt. Savage, where were rolled the first heavy rails made in the United States, and establishments for making boiler and plate iron. One of these plants, located at Canton, devoted itself almost exclusively in 1861 to the manufacture of armor plates for the Government vessels, and made the armor for Ericsson's Monitor,³ while other plants, such as the one built in 1870 at Cumberland to make iron rails,

¹ Manufactures of Maryland, Spencer, page 14.

² Maryland, Its Resources, Industries, and Institutions, by members of Johns Hopkins University and others, page 103.

³ Ibid., page 107.

bolts, rivets, and fish plates, became manufacturers of steel. With the development of the Lake Superior ore district, the iron and steel interests moved westward, and many of these plants were closed. The revival of the industry in Maryland began in 1887 with the construction of a large iron and steel plant at Sparrow Point, a short distance southeast of the city of Baltimore. Its construction marked an epoch in the manufacture of iron and steel in the United States. The ores are imported largely from Cuba, though some from Mediterranean ports are used, while the coal and coke are brought chiefly from Pennsylvania and West Virginia. An extensive plant is being built, however, to produce the coke needed, the gas by-product of which will be used as an illuminant and for fuel. A large proportion of the steel rail production finds a market abroad, shipments being made to Asia, Africa, Australia, and even to London.

There were 113 establishments engaged in the manufacture of foundry and machine shop products in 1900, with 4,695 wage-earners, and products valued at \$8,443,547. In 1890 there were 81 establishments, with 3,352 wage-earners, and products valued at \$4,925,672. The increase in the value of products during the decade was \$3,517,875, or 71.4 per cent.

There were 407 establishments engaged in the manufacture of flouring and grist mill products in 1900, with 541 wage-earners, and products valued at \$3,035,343. In 1890 there were 335 establishments, with 625 wage-earners, and products valued at \$6,904,888. The increase in the value of products during the decade was \$1,130,455, or 16.4 per cent. This industry is one of the oldest in the state, the mills in the early years of its history turning out more flour than the inhabitants required.

There were 5 establishments engaged in the manufacture of chewing and smoking tobacco and snuff in 1900, with 2,002 wage-earners, and products valued at \$7,054,159. In 1890 there were 6 establishments, with 1,178 wage-earners, and products valued at \$3,216,247. The increase in the value of products during the decade was \$3,837,912, or 119.3 per cent. There were 382 establishments engaged in the manufacture of cigars and cigarettes in 1900, with 2,309 wage-earners, and products valued at \$2,842,769. In 1890 there were 385 establishments, with 1,848 wage-earners, and products valued at \$2,858,344. The decrease in the value of products during the decade was \$15,575, or one-half of 1 per cent.

There were 47 establishments engaged in slaughtering and meat packing in 1900, with 514 wage-earners, and products valued at \$6,209,857. In 1890 there were 14 establishments, with 368 wage-earners, and products valued at \$4,311,412. The increase in the value of products during the decade was \$1,898,445, or 44 per cent. There were 35 establishments engaged in slaughtering, not including meat packing, in 1900, with 83 wage-earners, and products valued at \$1,836,502. In 1890 there were 3 establishments, with 21 wage-earners, and products valued at \$359,278. The increase in the value of products during the decade was \$1,477,224, or 411.2 per cent.

There were 40 establishments engaged in the manufacture of fertilizers in 1900, with 1,016 wage-earners, and products valued at \$5,481,905. In 1890 there were 53 establishments, with 1,051 wage-earners, and products valued at \$6,208,025. The decrease in the value of products during the decade was \$726,120, or 11.7 per cent. The increase of tobacco culture and other forms of agriculture made the importation of fertilizers a necessity, and in 1832 the first guano from Peru arrived at Baltimore.¹ Not long afterwards the manufacture of crushed bone was begun; this material was subsequently combined with phosphate rock from South Carolina, guano from the island of Navassa, in the West Indies, and kainit from Germany.²

There were 14 establishments engaged in the manufacture of cotton goods in 1900, with 4,727 wage-earners, and products valued at \$5,423,251. In 1890 there were 15 establishments, with 4,256 wage-earners, and products valued at \$5,457,792. The decrease in the value of products during the decade was \$34,541, or six-tenths of 1 per cent. Linsey-woolsey and osnaburgs were made in Maryland by household servants as early as 1649.³ Cotton from the Southern states has been used for nearly eighty years in the factories of the state, and Baltimore cotton duck has become world-famous. This product was, to a certain extent, an outgrowth of Baltimore's importance as a shipbuilding center, and since 1822 it has not only overshadowed the other textile products of Maryland, but has made Baltimore the largest cotton duck manufacturing city in the United States. Woodberry is a flourishing community built up almost entirely by the cotton industry.

There were 4 establishments engaged in the manufacture of woolen goods in 1900, with 877 wage-earners, and products valued at \$1,218,378. In 1890 there were 9 establishments, with 376 wage-earners, and products valued at \$579,516. The increase in the value of products during the decade was \$638,862, or 110.2 per cent. There were 4 establishments engaged in the manufacture of hosiery and knit goods in 1900, with 632 wage-earners, and products valued at \$514,093. In 1890 there were 8 establishments, with 289 wage-earners, and products valued at \$180,823. The increase in the value of products during the decade was \$333,270, or 184.3 per cent.

There were 52 establishments engaged in the manufacture of planing mill products in 1900, with 1,287 wage-earners, and products valued at \$3,553,083. In 1890 there were 45 establishments, with 1,174 wage-earners, and products valued at \$3,332,563. The increase in the value of products during the decade was \$220,520, or 6.6 per cent.

There were 4 establishments engaged in iron and steel shipbuilding in 1900, with 1,939 wage-earners, and products valued at \$3,299,491. There were 43 establishments engaged in wooden ship and boat building in 1900, with 676 wage-earners, and products valued at \$862,084. The two branches of the shipbuilding industry were not shown

¹ Maryland, Its Resources, Industries, and Institutions, page 345.

² Manufactures of Maryland, page 11.

separately in 1890. In that year 34 establishments were reported for the entire industry, with 1,043 wage-earners, and products valued at \$1,737,674. The increase in the value of products during the decade was \$2,423,851, or 139.5 per cent. As early as 1675, boats and small sailing vessels were built in Miles River, on the eastern shore of Chesapeake Bay,¹ and in 1790, according to one authority, Maryland built as many vessels as any two of the states of New York, Connecticut, and Rhode Island, and more than the state of New Hampshire.² Many of these earlier vessels, known as "Baltimore clippers," attained importance during the second war with Great Britain, and became potent in widening the markets for Maryland flour in the West Indies and Brazil, and in directing the return coffee trade of Brazil. Small boat building was carried on in Allegany and Talbot counties, while large vessels were constructed at Baltimore.³ In 1860, 23 establishments were reported, with a capital of \$348,600, and products valued at \$711,372. With the substitution of steam for sailing vessels, and the use of iron or steel instead of wood in their construction, the industry declined, particularly at Baltimore. Between 1885 and 1890 there was a decided revival, and the increase continued through the decade ending in 1900. The largest establishment in Baltimore city proper has built vessels for the United States Navy, and in 1890 it completed an oil-tank steamer, said to be the first of its kind constructed on this side of the Atlantic. At the Sparrow Point works, near the city, was built, as it is claimed, the first "tramp" steamer made entirely in the United States, while the floating steel dry dock constructed there for the Algiers naval station at New Orleans is one of the largest steel dry docks in the world. The same establishment is building two 10,000-ton steamers for the trans-Atlantic trade.

There were 42 establishments engaged in the manufacture of furniture in 1900, with 1,869 wage-earners, and products valued at \$2,976,494. In 1890 there were 33 establishments, with 1,376 wage-earners, and products

valued at \$2,110,955. The increase in the value of products during the decade was \$865,539, or 41 per cent.

There were 367 establishments engaged in the manufacture of lumber and timber products in 1900, with 1,964 wage-earners, and products valued at \$2,650,082. In 1890 there were 217 establishments, with 1,552 wage-earners, and products valued at \$1,600,472. The increase in the value of products during the decade was \$1,049,610, or 65.6 per cent.

There were 21 establishments engaged in the manufacture of paper and wood pulp in 1900, with 937 wage-earners, and products valued at \$2,589,540. In 1890 there were 17 establishments, 472 wage-earners, and products valued at \$1,001,945. The increase in the value of products during the decade was \$1,587,595, or 158.5 per cent.

There were 16 establishments engaged in the canning and preserving of oysters in 1900, with 1,444 wage-earners, and products valued at \$2,417,331. In 1890 there were 8 establishments, 2,834 wage-earners, and products valued at \$2,834,400. The decrease in the value of products during the decade was \$417,069, or 14.7 per cent. The first oyster-packing house was established in Baltimore early in the last century,⁴ and the industry is now also carried on at Annapolis, Cambridge, Oxford, St. Michaels, and Crisfield, the last-named city being built literally upon oyster shells.

In addition to the 15 leading industries, shown in Table 3, attention may be called to the somewhat varied history of sugar refining in the state. Beginning at Baltimore, in 1784,⁵ it advanced so steadily that in 1870 there were 4 refineries in the state, with products valued at \$7,007,857. Before 1890, however, the industry had disappeared, and in 1900 there was but 1 establishment in the state, and this was idle during the census year.

URBAN MANUFACTURES.

Table 4 shows the totals for the manufacturing and mechanical industries of the city of Baltimore as returned at the censuses of 1880, 1890, and 1900, with the percentages of increase.

STATISTICS OF MANUFACTURES.

TABLE 4.—COMPARATIVE SUMMARY, BALTIMORE, 1880, 1890, AND 1900, WITH PER CENT OF INCREASE FOR EACH DECADE.

	DATE OF CENSUS.			PER CENT OF INCREASE.	
	1900	1890	1880	1890 to 1900	1880 to 1890
Number of establishments	6,359	5,265	3,683	20.8	43.0
Capital	\$117,062,459	\$92,723,677	\$38,586,773	26.2	140.3
Wage-earners, average number	78,738	76,489	56,338	2.9	35.8
Total wages	\$29,220,460	\$29,895,500	\$15,117,489	12.3	97.8
Miscellaneous expenses	\$14,512,809	\$3,771,869	(²)	65.4	-----
Cost of materials used	\$87,175,131	\$73,770,001	\$47,974,297	18.2	53.8
Value of products, including custom work and repairing	\$161,249,240	\$141,723,599	\$78,417,304	13.8	80.7

¹ Decrease.² Not given.

It appears from Table 4 that there has been an increase during the past decade in the manufactures of the city of Baltimore. The number of establishments increased from 5,265 to 6,359, or 20.8 per cent; the average number of wage-earners from 76,489 to 78,738, or 2.9 per cent; and the value of products from \$141,723,599 to \$161,249,240, or 13.8 per cent. The increase in each of these particulars was smaller in Baltimore than in the state as a whole.

The number of establishments, number of wage-earners, and value of products for this city constituted 64.4, 72.7, and 66.5 per cent, respectively, of the totals for the state.

Table 5 presents the totals for the manufacturing industries of the 7 cities and towns withdrawn from the enumerators, and places them in comparison with the totals for the entire state and the state exclusive of these cities and towns.

MASSACHUSETTS.

Table 1 shows the manufacturing and mechanical industries of the state of Massachusetts as returned at the censuses of 1850 to 1900, inclusive, with the percentages of increase for each decade. This table also presents the average number of wage-earners employed by manufactur-

ing establishments, in comparison with the total population of the state, and the value of the land and buildings owned and reported by manufacturers as capital, in comparison with the assessed value of all real estate and improvements.

TABLE 1.—COMPARATIVE SUMMARY, 1850 TO 1900, WITH PER CENT OF INCREASE FOR EACH DECADE.

¹ Decrease.

² Includes proprietors and firm members, with their salaries; number only reported in 1900. (See Table 7.)

³ Not reported separately.

⁴ Not reported.

⁵ As given in the Report of the Tax Commissioner for 1899, page 13.

⁶ Does not include value of rented property.

Table 1 shows that there has been a considerable growth in the manufacturing and mechanical industries of Massachusetts during the half century. The population during these years increased from 994,514 to 2,805,346, or 182.1 per cent, while the average number of wage-earners employed in manufacturing establishments increased from 177,461 to 497,448, or 180.3 per cent, embracing, in 1900, 17.7 per cent of the entire population, compared with 17.8 per cent in 1850. Probably the best indication of the importance of the wage-earning class is afforded by the greatest number employed at any one time during the year. In 1900 this was 623,080, or 22.2 per cent of the total population of the state. Both the greatest percentage of increase in the value of products, 116.8, and the greatest absolute increase, \$298,366,646, are shown for the decade ending with 1870. The land area of Massachusetts is 8,040 square miles, only 4 states being smaller, namely, Rhode Island, Delaware, Connecticut, and New Jersey, and yet in 1900, as in 1890, Massachusetts ranked fourth among the United States in value of manufactured products. The development of manufacturing in Massachusetts is not due to special advantages based upon the possession of raw material. The coal, iron, cotton, wool, lumber, hides, and nearly all the other materials which

are used in the great manufacturing industries are brought from without, and after transformation into finished products are, in the main, consumed in markets outside the borders of the state.

The principal advantage which the state possesses is its waterpower, and although changes in the methods of developing power have perhaps rendered this less essential than formerly, it is still an important factor. The power of the Connecticut River at Holyoke, and at Turners Falls, in the town of Montague, utilized by means of immense dams of the most permanent construction, and by a system of canals, affords in each place a succession of mill sites along the entire water frontage. The Deerfield, Millers, Chicopee, and Westfield rivers, tributaries of the Connecticut, are all noteworthy power-producing streams. At Lowell and Lawrence, upon the Merrimac, the possession of similar advantages led to the selection of these places for the installation of the factory system in the manufacture of textiles. At Fall River, the power furnished from Watuppa Pond has been an essential element in the development of that cotton manufacturing center; while upon the Blackstone River and many lesser streams throughout the state, the existence of sites naturally adapted to the erection of mills was influential in the expansion of the

woolen and cotton industries in the early part of the century, thus laying the foundation of numerous thriving industrial communities.

Transportation facilities have kept pace with industrial development. Boston, the metropolis, is connected with the West by two railway systems, and these communicate, either directly or by branches, with all of the leading industrial centers. One general system, with its various divisions, communicates with the South by way of New York, uniting important manufacturing cities and towns, while a network of main and branch lines connects the northern and eastern factory centers of the state with each other, with the seaboard, and with the railway systems leading south and west. By water transportation, also, coal and supplies of materials are brought into Boston and other seaboard cities, and thence distributed to points of consumption.

The energies of the inhabitants of Massachusetts have always been directed largely into industrial channels. The records of the Patent Office show that a very large proportion of the machines which have had so great a part in transforming industrial conditions since the introduction of the factory system, are the inventions of Massachusetts men. In colonial days much was done through public action to foster and develop local manufactures, and the impetus thus given has had its effect throughout the industrial history of the state. The Massachusetts Charitable Mechanics' Association, incorporated in 1806, was influential for many years in promoting invention and improved craftsmanship by periodic exhibitions and in other ways. The state contains two technical educational institutions of the highest class, the Massachusetts Institute of Technology, at Boston, and the Worcester Polytechnic Institute, at Worcester. The importance of both these institutions has been very great. Their trained graduates have taken positions of responsibility in local industrial affairs, but their influence is by no means confined to the state. Both institutions have received liberal grants from the state, as well as gifts from individuals, and in return free scholarships have been established extending, on certain conditions, the privileges of these institutions to worthy graduates of the public schools. The importance of manual training in an industrial commonwealth is recognized in the public school system itself, the law providing that drawing and manual training may be regularly included in the courses of instruction. This provision is generally observed in the larger towns and cities, especially in those of industrial prominence. There is also the State Normal Art School, in which the principles of design receive prominent attention, and at Lowell, Fall River,

and New Bedford there are well-equipped schools, especially devoted to technical instruction in connection with the textile industry, and receiving appropriations from the state, in addition to private bequests and donations.

The early records contain numerous allusions to bounties or other aid granted to those who would undertake the establishment of useful, productive enterprises. The exportation of machinery from England to its colonies was forbidden by law, and in 1786 Massachusetts granted financial aid to Thomas Somers, an Englishman, and to Robert and Alexander Barr, Scotchmen—all of whom were acquainted with the progress of English invention—enabling them to construct spinning machinery, which was used experimentally at East Bridgewater, under the patronage of Col. Hugh Orr, of Bridgewater. An early and imperfect form of the Arkwright machines, brought into the country by Somers, became the property of Massachusetts.¹

As early as October 28, 1767, the sentiment of the citizens of Boston in favor of home industries found expression at a meeting held in Faneuil Hall, at which it was voted that on and after December 31, 1767, no one should purchase from abroad any of certain articles, among them cordage, men's and women's hats, ready-made wearing apparel, gloves, gold, silver, or thread lace of all sorts; broadcloth that cost above 10 shillings per yard; silk or cotton velvet, or silk of all kinds, for garments; or gauze, lawns, or cambrics.² In 1780 an association for making cloth was formed at Worcester; in April of that year the first piece of corduroy made in Worcester was taken from the loom.³ Similar associations for the industrial development of the province were soon formed elsewhere. The attention of the people was in this way directed into industrial channels, and busy industrial communities were founded, which were destined, under the influence of the factory system, to become important manufacturing towns and cities.

Table 2 divides the industries of the state between the hand trades and the manufactures proper. This table also gives the statistics for governmental establishments, educational, eleemosynary, and penal institutions, and establishments with a product of less than \$500; these were not reported at previous censuses, and therefore are omitted from the other tables and their use confined to Table 2.

Establishments with a product of less than \$500	2,773	2,895,993	2,865	760	43,321	100,093	201,891	12,603	189,288		754,306
All other establishments	18,822	791,570,529	15,172	445,293	199,139,823	63,567,917	509,518,746	155,412,755	336,187,090	17,948,901	928,850,042

¹ Includes bicycle and tricycle repairing, 553; blacksmithing and wheelwrighting, 1,996; boots and shoes, custom work and repairing, 1,718; carpentering, 2,103; clothing, men's, custom work and repairing, 1,327; clothing, women's, dressmaking, 1,335; dyeing and cleaning, 85; furniture, cabinetmaking, repairing, and upholstering, 500; lock and gun smithing, 151; masonry, brick and stone, 759; millinery, custom work, 874; painting, house, sign, etc., 1,743; paper hanging, 98; plastering and stuccowork, 108; plumbing, and gas and steam fitting, 1,072; sewing machine repairing, 20; taxidermy, 15; typewriter repairing, 7; watch, clock, and jewelry repairing, 694.

Of the 31,982 establishments of all classes shown in this table, 18,131, or 56.7 per cent, were small shops included in the groups of "hand trades" and "establishments with a product of less than \$500." The value of the products of these establishments, consisting principally of the sums received for custom work and repairing, amounted to

\$107,097,313, or only 10.3 per cent of the total value of the products of the state.

In addition to the 31,982 active establishments in the state during the census year, with a capital of \$840,281,127, shown in Table 2, there were 148 idle establishments, with a capital of \$5,583,033, divided as follows:

INDUSTRIES.	Number of idle establishments.	Capital.	INDUSTRIES.	Number of idle establishments.	Capital.
Ammunition	1	\$249,500	Liquors, malt	1	\$21,500
Bookbinding and blank book making	3	14,850	Lumber and timber products	5	24,096
Boots and shoes, factory product	11	152,460	Lumber, planing mill products, including sash, doors, and blinds	4	49,720
Brick and tile	6	70,100	Marble and stone work	4	20,130
Bridges	1	75,000	Masonry, brick and stone	8	20,800
Carpentering	13	19,795	Mineral and soda waters	1	60,000
Carrriages and wagons	3	19,836	Paper and wood pulp	3	784,908
Electrical apparatus and supplies	3	327,500	Pottery, terra cotta, and fire-clay products	2	98,800
Flouring and grist mill products	4	21,825	Silk and silk goods	2	19,000
Foundry and machine shop products	6	47,100	Tinsmithing, copper-smithing, and sheet-iron working	3	16,113
Horseshoes, factory product	2	993,747	Wood, turned and carved	1	30,000
Hosiery and knit goods	2	80,000	Woolen goods	16	1,086,157
Iron and steel	1	510,000	Worsted goods	2	988,643
Iron and steel, forgings	2	94,510	All other industries	86	66,728
Iron and steel, nails and spikes, cut and wrought, including wire nails	1	38,715			
Liquors, distilled	1	281,500

The 21 leading industries of the state in 1900, as shown in Table 3, embraced 5,570 establishments, or 19.1 per cent of the total number in the state; used a capital of \$578,812,222, or 70.3 per cent of the total; gave employment to 332,232 wage-earners, or 66.8 per cent of the total number; and paid \$149,868,269, or 63 per cent of the total wages. The value of their products was \$672,470,907, or 65 per cent of the total. In the discussion of Table 3, which follows, these industries are ranked with reference to the value of their products.

Table 3 shows that the manufacture of textiles is the most important industry in the state. The 512 establishments reported in 1900 gave employment to 149,346 wage-earners, or 30 per cent of the wage-earners employed in the state, and the products were valued at \$214,600,980, or 20.7 per cent of the total value of the products of the state. In 1890 there were 562 establishments, 125,514 wage-earners, and products valued at \$186,552,533. The increase in the value of products during the decade was \$28,048,447, or 15 per cent. In the manufacture of textiles Massachusetts has long ranked first among the United States. In 1900 its textile products exceeded in value those of Pennsylvania, the state ranking second, by \$55,818,893, or 35.2 per cent. The subdivisions of the textile industry, mentioned in the order of the value of products, are: Cotton goods, including cotton small wares; worsted goods; woolen goods; dyeing and finishing textiles; carpets and rugs, other than rag; hosiery and knit goods; silk and silk goods; felt goods; wool hats; and shoddy.

There were 177 establishments engaged in the manufacture of cotton goods, including cotton small wares, in 1900, with 92,515 wage-earners, and products valued at \$111,125,175. In 1890 there were 187 establishments, 75,544 wage-earners, and products valued at \$100,202,882. The increase in the value of products during the decade was \$10,922,293, or 10.9 per cent.

The total number of spindles in the cotton industry of the state in 1900 was 7,784,687, as against 5,824,518 in 1890, an increase of 1,960,169, or 33.7 per cent. This was 40.6 per cent of the total increase in the United States. The looms in 1900 aggregated 179,582, as compared with 133,227 in 1890, an increase of 34.8 per cent. In 1900 Massachusetts had 41 per cent of all spindles and 39.8 per cent of all looms employed in the cotton factories of the United States. The state was first in rank among the United States in the manufacture of cotton goods, having held that position since the beginning of the industry in this country. In 1900 the value of the products of its cotton mills was 33.2 per cent of the value of all the cotton goods manufactured in the United States; the corresponding percentage for South Carolina, the state second in rank, was 8.9.

The production of the finer kinds of cotton goods shows a gratifying increase. Fancy woven fabrics increased from 59,061,558 square yards in 1890 to 137,064,111 square yards in 1900, or 132.1 per cent, while in the United States exclusive of Massachusetts the increase was only 47.5 per cent. Of the 268,852,716 square yards of napped fabrics made in the United States in 1900, Massachusetts produced

137,199,384 square yards, or 51 per cent. Although the increase in the state in ticks, denims, and stripes was slight—from 61,192,423 to 63,794,395 square yards, or 4.3 per cent—the increase in the United States exclusive of Massachusetts was only 2 per cent. The increase in the production of cotton duck in the state was from 6,174,332 to 17,903,957 square yards, or 190 per cent. Of twills and sateens made in the United States in 1900, Massachusetts produced 86,668,240 square yards, or 36.7 per cent. The manufacture of ginghams decreased in the state, and only slightly increased in the United States. The production of print cloths increased from 610,200,536 square yards in 1890 to 927,405,189 square yards in 1900, or 52 per cent, and this quantity was 58.6 per cent of all the print cloths made in the United States. In corduroy, cotton velvet, and plushes, and mosquito and other nettings, not reported in 1890, the quantity produced in Massachusetts reached in 1900 an aggregate of nearly four million square yards.

The power loom, which revolutionized the cotton industry in the United States, was first constructed by Francis C. Lowell, of Boston, and Paul Moody, of Amesbury.¹ The fact that the power loom was in successful operation in Great Britain was known in the United States, but it was difficult to obtain any reliable knowledge of its construction, because of the jealousy of the manufacturers. Exportations of machinery were also carefully restricted. Mr. Lowell went to Edinburg in 1811 and then to Manchester, obtaining sufficient information to enable him, upon his return to Massachusetts in 1813, to secure the construction of the power loom, which has accomplished so much for the cotton manufacture of the United States. It was first put into operation at Waltham in 1814.² In England a patent for a power loom had been granted in 1785 to Edmund Cartwright, but it can not be said that power-loom weaving was successfully established until 1804, for not until that year was the necessary auxiliary machinery constructed, or the practical skill necessary for the business acquired.

The first cotton mill in the United States was built at Beverly, in 1788. In 1806 or 1807 an old woolen mill at Byfield was transformed into a cotton mill, with English machinery, and the manufacture of warp yarn and wicking was begun. Later, the manufacture of tickings, coarse ginghams, and sheetings was established, all being woven on hand looms. At about the same date Seth Bemis, of Watertown, began the production of cotton duck.³ Between 1806 and 1814, 50 companies were incorporated in Massachusetts, principally for producing cotton and woolen goods, and in 1815 there were 57 cotton mills in the state, with 46,650 spindles.³ In 1813 Dexter Wheeler and others established the manufacture of cotton cloth, and in 1820 the company was incorporated as the Fall River Manufactory. In 1813 also the Troy Cotton and Woolen Manufactory was established, and on February 13, 1813,

¹ Statistics of Manufactures, Massachusetts, 1898, page 221 ff.

² Cotton Manufacture in the United States, by Samuel Batchelder, page 61 ff.

³ Census of Providence, by Stone.

the Boston Manufacturing Company was incorporated by special act of legislature. This corporation erected at Waltham a large mill containing 1,700 spindles in which all processes of manufacture were carried on under one roof, the first instance of the kind in the United States. In 1824 the Hamilton Company was organized at Lowell. This company was the first to apply the power loom to the manufacture of twilled and fancy goods and was the first to manufacture cotton drills. Its print works went into operation in 1828, but print works had been erected in Lowell six years earlier.¹

The production of sail duck and other grades of linen fabrics was introduced early, but subsequent to 1810 the introduction of cotton goods superseded that of linen to a considerable extent. In 1835 Smith, Dove & Co. began the manufacture of yarn, thread, and twine at Andover. In 1846 Henry H. Stevens, of Webster, began the production of linen goods, receiving, three years later, the gold medal of the American Institute for the best piece of American linen spun by machinery and woven on the power loom. In 1852 the American Linen Manufacturing Company of Fall River was established, and was the first and only regularly equipped manufactory of linen, on a large scale, from long-line flax.²

There were 45 establishments engaged in the manufacture of worsted goods in 1900, with 18,867 wage-earners, and products valued at \$40,557,363. In 1890 there were 33 establishments, 11,835 wage-earners, and products valued at \$21,933,775. The increase in the value of products during the decade was \$18,623,588, or 84.9 per cent.

In 1900 Massachusetts led all the other states in the manufacture of worsted goods, and for the first time the value of the products of the worsted mills exceeded that of the products of the woolen mills. The increase in the manufacture of worsted goods in the United States, for the decade ending with 1900, was so great that the total value of products was \$1,884,186 more than the total value of products of the woolen mills, although in 1890 the value of the products of the woolen mills exceeded that of the worsted mills by \$54,383,325. This shows the growing importance of the worsted industry. In Massachusetts the increase in the value of products during the decade was the phenomenal one of 84.9 per cent; in the United States as a whole it was 51.9 per cent, and, exclusive of Massachusetts, only 39.3 per cent. The absolute increase in Massachusetts during the decade ending in 1890 was \$11,467,759, and for the decade ending in 1900 it was \$18,623,588. The capital has more than doubled since 1890, increasing from \$21,204,909 to \$45,790,300, or 115.9 per cent. In 1900 it was 34.6 per cent of the total capital in the United States invested in this manufacture, compared with 31.1 per cent in 1890. In 1900, 70,078,969 square yards of cloth were made in its worsted mills, which was an increase from 43,579,321 square yards in 1890, or 60.8 per cent. The quantity produced in 1900 was 29.5 per cent of the products of all

the worsted mills of the United States in that year. Of worsted coatings, etc., for men's wear, the state in 1900 manufactured 21,180,544 square yards, or 42.2 per cent of all such goods made in the United States; of linings, Italian cloths, etc., 6,302,534 square yards, or 90.3 per cent of all made in the United States; and of worsted dress goods, 13,026,286 square yards, or 23.9 per cent of all made in the United States.

In the test of machinery the state makes a still better showing. The increase in the number of spindles in the worsted mills in the United States during the last decade was 81.6 per cent; in Massachusetts the increase was from 204,510 in 1890 to 429,526 in 1900, or 110 per cent. The increase in the number of looms in the United States was 38.5 per cent, while in Massachusetts it was from 6,488 to 9,584, or 47.7 per cent. In 1900 the state had 31.3 per cent of all the spindles and 36.3 per cent of all the looms employed in the worsted mills of the United States; in 1890 the corresponding percentages were 27.1 and 34.1, respectively. The state was first in 1900 in number of combing machines and second in carding machinery. Of the average number of wage-earners employed in worsted mills of the United States, Massachusetts had 33.1 per cent in 1900, compared with 27.6 per cent in 1890.

For many years the worsted manufacture was restricted, in Europe as well as in the United States, to goods intended for women's wear. About 1860 French and English manufacturers began to apply the process to goods for men's wear. The first American whose attention was attracted to the manufacture was E. R. Mudge, of Boston, one of the United States commissioners to the Paris Exposition of 1857, and also a director and the selling agent of the Washington mills at Lawrence. The French worsteds exhibited at the exposition were made of short-stapled merino wools. Upon his return to the United States, Mr. Mudge found that the Ohio merino wools were well adapted to the new manufacture, and at once sent to France for combing machines to be placed in the Washington mills. Within a few months the worsted goods of this mill, the first of the kind to be made in the United States, were on the market and selling as French-made goods. In 1867 American wool manufacturers, as a class, realized that they had a new field for their efforts. Other New England mills followed the example of those of Massachusetts.³ In 1869 light-weight suitings for men's wear, made in the United States, were first put on the market in quantity, but it was not until late in 1870 or early in 1871 that heavy-weights were manufactured here.⁴ The tendency since 1870 has been steadily in favor of the increase of the worsted manufacture, and in no other state, during the past decade, has this increase been so great as in Massachusetts.

There were 131 establishments engaged in the manufacture of woolen goods in 1900, with 17,717 wage-earners, and products valued at \$30,888,104. In 1890 there were

¹ Statistics of Manufactures, Massachusetts, 1898, page 221.

² *Ibid.*, page 229.

³ The New England States, edited by William T. Davis, Vol. I, pages 241 and 242.

⁴ Eleventh Census of the United States, Manufacturing Industries, Part III, page 57.

165 establishments, 19,452 wage-earners, and products valued at \$35,771,161. The decrease in the value of products during the decade was \$4,883,057, or 13.7 per cent.

Massachusetts was first in 1900 and also in 1890 in the manufacture of woolen goods. The rise of the manufacture of worsted goods has been accompanied by a decline in that of woolen goods in Massachusetts, as in the United States at large; but in all important particulars, the proportion of the industry carried on in that state in 1900 was greater than in 1890. The state in 1900 made 26.1 per cent in value of all the goods made in the woolen mills of the United States, compared with 26.8 per cent in 1890. In capital invested in woolen mills the state in 1900 had 26.7 per cent of that in the United States, compared with 26.7 per cent in 1890; and in number of wage-earners, 25.7 per cent in 1900, compared with 25 per cent in 1890. The quantity of worsted goods made in woolen mills has increased since 1890. Massachusetts woolen mills in 1900 manufactured 824,613 square yards of worsted coatings, or 22.8 per cent of the quantity made in these mills in the United States, compared with 20.3 per cent in 1890. Of worsted dress goods, 1,086,359 square yards were made in 1900, or 33.6 per cent of the quantity manufactured in the United States, while at the census of 1890 none of this variety of goods was returned as made in the woolen mills of Massachusetts.

The first attempt at woolen goods manufacture was at Rowley, in Essex county, in 1643. Various other mills followed, notably at Watertown, in 1662; at Dedham, in 1681; at Pittsfield, in 1767; at Stockbridge, in 1788; and at Newbury, in 1794. This last was the first incorporated woolen mill built in Massachusetts. The wool-card machinery devised by Amos Whittemore as early as 1797 transformed the woolen industry. The inventions of John Goulding and others also revolutionized methods in the carding department. The first cloth mill of considerable size in the United States was erected at Pittsfield, in 1812, by L. Pomeroy.¹ In February, 1812, in view of the approaching state of war, the legislature sent a resolution to the Senate of the United States, expressing its confidence in the ability of the citizens of Massachusetts to supply by contract all the blankets and clothing that might be needed in any contingency, and representing that these could be furnished "mostly if not altogether" from factories within the state.² Spinning jennies operated by hand are said to have been in operation at Pittsfield in 1806, and by waterpower at Uxbridge in 1814 or 1815. An early form of power loom for broadcloth, built at Williamsburg, Mass., went into operation at Pittsfield about 1826.³ "Not a yard of fancy wool fabrics," says Samuel Lawrence, "had ever been woven by the power loom in any country, till done by William Crompton, at the Middlesex Mills, Lowell, in 1840."⁴

¹Statistics of Manufactures, Massachusetts, 1898, pages 224 and 225.

³Bulletin of National Association of Wool Manufacturers, 1901, pages 256 and 278.

There were 37 establishments engaged in the dyeing and finishing of textiles in 1900, with 4,678 wage-earners, and the work done was valued at \$8,868,290. In 1890 there were 33 establishments and 4,270 wage-earners, and the work done was valued at \$6,496,215. During the decade the increase in value of work done was \$2,372,075, or 36.5 per cent.

There were 8 establishments engaged in the manufacture of carpets and rugs, other than rag, in 1900, with 4,480 wage-earners, and products valued at \$6,966,237. In 1890 there were 7 establishments, 5,109 wage-earners, and products valued at \$7,275,009. The decrease in the value of products during the decade was \$308,772, or 4.2 per cent.

Erastus B. Bigelow, of Massachusetts, early devised a power loom for weaving knotted counterpanes, and another for making coach lace. Later he made a written contract to furnish a company at Lowell with power looms for ingrain carpeting, before he had even made a model or a drawing of the machine. Afterwards Mr. Bigelow introduced the Brussels carpet loom. Carpet weaving in a small way was begun at Worcester in 1804; and the Lowell Manufacturing Company was incorporated in 1828, running about seventy carpet looms in addition to its cotton looms. Later, this company, under the Bigelow patents, was the first to manufacture carpeting successfully by power looms. In 1848 Mr. Bigelow and others organized the Bigelow Carpet Company at Clinton, making 5-frame Brussels, Wilton, and tapestry carpets.⁵

There were 54 establishments engaged in the manufacture of hosiery and knit goods in 1900, with 6,667 wage-earners, and products valued at \$6,620,257. In 1890 there were 74 establishments, 4,562 wage-earners, and products valued at \$5,082,087. The increase in the value of products during the decade was \$1,538,170, or 30.3 per cent. The only stocking factory in the United States in 1831 was that of the Newburyport Hose Manufacturing Company, although early patents to Massachusetts citizens for stocking looms and knitting machines are recorded. In 1837 William and Nathan Appleton, Benjamin R. Nichols, and associates began the manufacture of knit hose and shirts at Lowell.⁶

There were 20 establishments engaged in the manufacture of silk and silk goods in 1900, with 3,110 wage-earners, and products valued at \$5,957,532. In 1890 there were 20 establishments, 2,993 wage-earners, and products valued at \$5,557,569. The increase in the value of products during the decade was \$399,963, or 7.2 per cent. Jonathan H. Cobb, of Dedham, was a pioneer in the silk industry of the United States. In 1790 sewing silk was made in Worcester county and elsewhere in the state, and the manufacture of lace of various grades, especially coach lace, was thriving at Ipswich, in Essex county, and at other places.⁷

There were 7 establishments engaged in the manufacture

⁴Bulletin of National Association of Wool Manufacturers, 1901, pages 278 and 279.

⁵Statistics of Manufactures, Massachusetts, 1898, page 227.

⁶Ibid., page 225.

⁷Ibid., page 227.

of felt goods in 1900, with 464 wage-earners, and products valued at \$1,526,830. In 1890 there were 7 establishments, 326 wage-earners, and products valued at \$918,890. The increase in the value of products during the decade was \$607,940, or 66.2 per cent.

There were 4 establishments engaged in the manufacture of wool hats in 1900, with 541 wage-earners, and products valued at \$1,103,003. In 1890 there were 7 establishments, 1,017 wage-earners, and products valued at \$1,700,486. The decrease in the value of products during the decade was \$597,483, or 35.1 per cent.

There were 29 establishments engaged in the manufacture of shoddy in 1900, with 307 wage-earners, and products valued at \$988,189. In 1890 there were 29 establishments, 406 wage-earners, and products valued at \$1,614,459. The decrease in the value of products during the decade was \$626,270, or 38.8 per cent.

The factory manufacture of boots and shoes ranks second among the industries of the state, with 640 establishments, 58,645 wage-earners, and products valued at \$117,115,243. In 1890 there were 1,057 establishments, 67,374 wage-earners, and products valued at \$116,387,900. The increase in the value of products during the decade was \$727,343, or six-tenths of 1 per cent. Allied to the factory manufacture of boots and shoes is the manufacture of boot and shoe cut stock, with 270 establishments, 4,390 wage-earners, and products valued at \$18,238,922. In 1890 there were 288 establishments, 4,208 wage-earners, and products valued at \$15,923,650. The increase in the value of products during the decade was \$2,315,272, or 14.5 per cent.

Massachusetts ranked first in the United States in 1900 in the factory manufacture of boots and shoes—a rank it has held for many years. In this manufacture, as in that of cotton goods, the state has been unapproached. In 1900 it manufactured 44.9 per cent of the total value of the factory boot and shoe products of the United States, while the state second in rank—New York—turned out 9.8 per cent of these products. The first 3 cities in the United States, ranked by the value of their boot and shoe products, are Brockton, Lynn, and Haverhill, all in Massachusetts, while other Massachusetts cities are well up in the list. Brockton's value of products in 1900 exceeded that of the city fourth in rank—Cincinnati, Ohio—by \$11,055,973, or 125.8 per cent. There were employed in the state in 1900, 41 per cent of the average number of wage-earners in the factory manufacture of boots and shoes in the United States, and their wages amounted to 46.9 per cent of the total wages. Of these wage-earners 66.5 per cent were men; 31.8 per cent women; and only 1.7 per cent children, while the percentages for the whole industry in the United States were 63.8, 33, and 3.2, respectively.

The consumption of shoes has increased largely throughout the United States since the industry was established in Massachusetts. Rival factories have sprung up all over the Union, but Massachusetts continues to be the great center of the industry. From the earliest years Lynn has been a center of the boot and shoe manufacture. The first

shoemakers there were Philip Kertland and Edmund Bridges, who came to the colony in 1635,¹ and the business increased thereafter with the growth of the town in population, and was given great impetus after 1750, when John Adam Dagr, a Welshman, succeeded in producing shoes at Lynn equal to the best made in England.² Leather heels were introduced in place of wood about 1800, the use of morocco leather having been begun by Ebenezer Breed seventeen years earlier.³ Many of the towns in eastern Middlesex, Essex, and Norfolk counties became more or less interested in shoemaking. It was not uncommon for farmers and others actively engaged in other employment during the summer to devote the winter to shoemaking, and before the introduction of machinery under the modern factory system, hundreds of women were employed in binding shoes at their homes.

The entire shoe was formerly made by one artisan. A small group of men, working together in a little one-story shop connected with or adjacent to the dwelling, was a characteristic sight in many eastern Massachusetts towns in the first half of the century. Piecework was the custom, and it still prevails. In early times workmen were paid 15, 20, 25, or 30 cents per pair, according to the kind of shoe, and even higher prices for extra quality work. The average workman by twelve hours' labor could earn about a dollar. Women closers and binders working by hand could average about twenty cents a day. Men living in towns adjacent to Lynn would walk to their employers' place of business for stock, and in about a week return the finished shoes, frequently receiving their wages in store orders. The wages earned continually fluctuated, being always subject to individual bargains with employers.⁴

In 1818 Joseph Walker, of Massachusetts, invented shoe pegs to be used as a substitute for hand sewing in the boot and shoe industry. In 1851 A. C. Gallahue produced a shoe-pegging machine—afterwards improved by E. Townsend and B. F. Sturtevant, of Boston⁵—and still later nailing and cable-screw machines. Finally the McKay sole-sewing machine, attributed to McKay, but representing, in its perfected form, the combined ideas of several other Massachusetts inventors, was a transforming factor in the boot and shoe industry. This was adopted in 1861. The introduction of machinery was practically complete by 1865. The industry is now conducted in large, well lighted, thoroughly ventilated factories, equipped with a number of ingenious inventions, each shoe being the result of the successive operations of numerous workmen. The cities especially devoted to the industry are Lynn, Brockton, and Haverhill, although there are important establishments elsewhere.

There were 825 establishments engaged in 1900 in the manufacture of foundry and machine shop products, the industry third in rank, with 32,234 wage-earners, and prod-

ucts valued at \$56,290,159. In 1890 there were 711 establishments, 23,379 wage-earners, and products valued at \$38,906,680. The increase in the value of products during the decade was \$17,383,479, or 44.7 per cent.

Certain towns in Bristol and Plymouth counties early became extensively engaged in the manufacture of iron castings, hollow ware, and cooking and heating apparatus. In 1646 the Colony Court granted a monopoly for fourteen years "for the making of engines for mills, to go by water, * * * and for the making of scythes and other edged tools" to Joseph Jenks, an ingenious worker in metals, who is said to have come to Massachusetts with Winthrop.¹ Of Jenks, Lewis, the historian of Lynn, remarks: "Joseph Jenks deserves to be held in perpetual remembrance in American history as being the first founder who worked in brass and iron on the Western Continent."² Wiredrawing and the manufacture of wool cards were industries to which the Massachusetts colonists gave early attention. Hugh Orr is said to have made, in 1748, the first musket ever made in America,³ and his son established the manufacturing of plate shovels, afterwards a distinctive Massachusetts industry. Nail making in Plymouth county was an important branch of the metal industry before the close of the Eighteenth century. Jacob Perkins, of Newburyport, invented a nail-making machine which he patented in 1795. In Worcester county the development of the manufacture of hardware, tools, machinery, etc., began at an early date, and culminated in the extensive metal industries of the modern city of Worcester. The extension of the textile, boot and shoe, and other important industries, under the era of machinery, has stimulated the expansion of skilled metal working, including the production of artisans' tools, and of machinery of all kinds.

There were 22 establishments engaged in the slaughtering industry in 1900, with 2,748 wage-earners, and products valued at \$31,633,483. In 1890 there were 24 establishments, 1,779 wage-earners, and products valued at \$20,221,645. The increase in the value of products during the decade was \$11,411,838, or 56.4 per cent.

There were 981 establishments engaged in printing and publishing in 1900, with 10,859 wage-earners, and products valued at \$28,964,680. In 1890 there were 813 establishments, 8,482 wage-earners, and products valued at \$18,918,942. The increase in the value of products during the decade was \$10,045,738, or 53.1 per cent.

The first printing done in the American colonies was at Cambridge by one Daye, who in January, 1639, printed the Freeman's Oath. The press used was brought from England in 1638 by Rev. Mr. Glover. Daye issued in 1640 the Bay Psalm Book, the first book published in the colonies. In 1649 he was succeeded by Samuel Green, and a new press was sent from England in 1655 for the printing of Eliot's Indian Bible. It was in Cambridge and

Boston that all the printing in the colonies was done for nearly forty years. In 1672 the first copyright was granted to John Ussher, of Boston, for a revised edition of the laws of the colony. Previous to 1664 the General Court had restricted the privilege of printing to Cambridge; but in 1674, this restriction having been removed, John Foster established the first press set up in Boston. In 1681 he was succeeded by a Mr. Sewall, and on September 25, 1690, Richard Pierce published the first newspaper in America, which was, however, suppressed by the General Court. In April, 1704, appeared the Boston News-Letter, published by John Campbell, and this was the first successful newspaper in America. It was followed, December 21, 1719, by the Boston Gazette.⁴ Much fine work is done in printing and publishing throughout Massachusetts, and many notable books and magazines are the products of the various presses of the state. The increase in the value of products during the decade is a notable one.

There were 119 establishments engaged in the tanning, currying, and finishing of leather in 1900, with 7,010 wage-earners, and products valued at \$26,067,714. In 1890 there were 194 establishments, 7,725 wage-earners, and products valued at \$27,771,815. The decrease in the value of products during the decade was \$1,704,101, or 6.1 per cent—due to the transfer of the production of certain kinds of leather to the West, where tan bark is abundant.

There were 93 establishments engaged in the manufacture of paper and wood pulp in 1900, with 9,061 wage-earners, and products valued at \$22,141,461. In 1890 there were 85 establishments, 7,817 wage-earners, and products valued at \$21,524,173. The increase in the value of products during the decade was \$617,288, or 2.9 per cent.

Massachusetts has long been first in the manufacture of fine writing papers. In 1900 the value of such product was \$11,298,628, or 71.1 per cent of that produced in all the mills of the United States. In book paper it was also first, with a value of \$5,501,788, or 22.1 per cent of the total for the United States. Much of the history of paper making in the United States is the history of the industry in Massachusetts. Although the state can not claim that the first paper mill in the United States was established within its borders, the manufacture of paper began there very early. On September 13, 1728, the General Court passed a grant for the encouragement of a paper mill established on the Neponset River at Milton, 7 miles from Boston. Benjamin Faneuil, the father of Peter, of Faneuil Hall fame, was interested in it. The grant gave the company the sole right to manufacture paper in the province for ten years, but the production of certain quantities and kinds of paper was required. Paper was then made by hand, and the people were, by advertisement, requested to save their rags. This establishment had to be closed a number of years because of a lack of good workmen, but in 1760 the mill was again started, the new proprietor hav-

⁴ Eighth Census of the United States, Manufactures, Introduction, pages cxxxiv and cxxxv.

ing secured the services of a British soldier named Hazleton, who was a practical paper maker. Before 1776 there were 4 mills at Milton, out of 7 accounted for in all New England.

The Fourdrinier machine, an English improvement of a French inventor's idea, did not come into existence until 1804, and was not used in the United States until about 1825, when a machine imported from England was placed in a mill at Springfield. Four years later there were 6 of these machines in the state, and in 1850 automatic machinery was used in all but 2 paper mills of the United States. In 1840 Massachusetts had the largest production of any state, the value being \$1,659,930. In 1845 it was \$1,750,273 and in 1855, \$4,141,847.¹ In the latter year there were 20 mills in the single town of Lee.

In 1802 the first paper mill in Berkshire county, the "Old Berkshire," went into operation at Dalton, which is now one of the great fine-paper making centers of the United States. It was built by Wiswell, Crane, and Willard, and among the present-day owners of the new mill, built in 1872 on the site of the old one, are the grandsons of Zenas Crane. Zenas Crane sold his interest in the "Old Berkshire Mill," and in 1810 bought in the "Old Red Mill." This was burned in 1879, but rebuilt of stone and named the "Pioneer Mill." It is still in the possession and active management of the Crane family. The "Government Mill," at Pittsfield, near the Dalton line, is devoted wholly to the manufacture of paper needed by the United States Government for national bank bills, United States bonds, certificates, and treasury notes. Still another mill in this section makes ladies' fine stationery. Others produce writing paper of the first quality, and one of them makes parchment and bond paper for general use. The introduction of silk threads into the fiber of bank-bill paper, to prevent counterfeiting, was the ingenious invention of Zenas Marshall Crane in 1849.²

The first mill in South Lee, where at one time more paper was made than in any other town in the United States, was established in 1806 by Samuel Church. About the same time a mill was erected on the north side of the Chicopee River. This, about 1825, became the property of David Ames, who introduced improved machinery, and became the largest manufacturer of paper in the United States.³ The first paper made in the United States of wood pulp is said to have been manufactured by Elzur Smith, of Lee, subsequent to 1854.⁴

Four-fifths of all the loft-dried paper manufactured in the United States from 1860 to 1897 was made within 15 miles of Springfield, in which city a mill was operated by David Ames in 1800, on the foundation of one owned by Samuel Babcock in 1786. To David Ames' son, John, the trade is indebted for a cylinder machine, for which he secured a patent May 14, 1822. Although superseded in

the United States by the use of the Fourdrinier machine, it marked a great advance in paper making. John Ames also invented other paper machinery, and originated the idea of running a continuous sheet through the size, instead of dipping each sheet. These inventions were put into practical operation in the mill at Chicopee Falls. It is claimed that in 1828 the Ames mills produced one-half of the paper consumed in the United States.⁵ The first white paper made, to any extent, from straw in the United States was produced in the Ames factory at Springfield, about 1840.⁶

The modern paper mills, with their heavy machinery, were found to require more power than the smaller streams possessed, and this led to their establishment on the Connecticut River at and near Holyoke, where there is a fall of about seventy feet in a distance of less than two miles. The first canal in the United States was built here in 1790 on the South Hadley side, where, in 1830, a paper mill was established. The second mill was founded at Holyoke in 1853. This was the beginning of the large mills. Establishment followed establishment, until now, grouped around one of the best waterpowers in the United States, are over a score of factories, making hundreds of tons of high-grade paper daily.⁷ The use of wood pulp in paper making has extensively superseded other materials, except in special grades. The process of mechanical grinding, upon which the pulp industry was founded, was introduced in the United States at Stockbridge, Mass., in 1807.

There were 7 establishments engaged in the refining of sugar and molasses in 1900, with 592 wage-earners, and products valued at \$19,626,882. In 1890 there were 4 establishments, 204 wage-earners, and products valued at \$16,875,538. The increase in the value of products during the decade was \$2,751,344, or 16.3 per cent.

There were 313 establishments engaged in the factory manufacture of clothing in 1900, with 6,776 wage-earners, and products valued at \$15,032,604. In 1890 there were 265 establishments, 8,608 wage-earners, and products valued at \$23,106,164. The decrease in the value of products during the decade was \$8,073,560, or 34.9 per cent.

There were 70 establishments engaged in the manufacture of rubber and elastic goods in 1900, with 5,944 wage-earners, and products valued at \$13,885,050. In 1890 there were 50 establishments, 3,472 wage-earners, and products valued at \$8,518,612. The increase in the value of products during the decade was \$5,366,447, or 63 per cent. Allied to this industry is the manufacture of rubber boots and shoes, with 6 establishments, 5,250 wage-earners, and products valued at \$16,490,015. In 1890 there were 5 establishments, 4,932 wage-earners, and products valued at \$9,792,024. The increase in the value of products during the decade was \$6,697,991, or 68.4 per cent.

Massachusetts ranked first in 1900 in the manufacture of

rubber boots and shoes. In 1890 it was also first; and the manufacture of rubber boots and shoes in the other states was then included under "all other states" to avoid disclosing the operations of individual establishments, the establishments in each numbering less than 3. The state's supremacy in the manufacture of rubber and elastic goods is also unquestioned. In 1900, as in 1890, it ranked first. In both industries in 1900 the percentage of increase was marked, showing not only an increased consumption of rubber boots and shoes, but a remarkable increase in the variety of uses to which rubber and elastic goods are put, thus verifying Mr. Goodyear's most sanguine predictions.

The manufacture of india-rubber goods was first undertaken in the United States at Roxbury, Mass., in 1838, by John Haskins, Edwin M. Chaffee, and Luke Baldwin. They had learned the art of dissolving rubber gum and soon afterward sold their interests to the Roxbury India Rubber Company. Among the products of this company was india-rubber cloth for carriage tops and these attracted the attention of Nathaniel Hayward, the proprietor of a Boston livery stable. The rubber not being thoroughly vulcanized became sticky in hot and extremely rigid in cold weather, and investors in the manufacture suffered financial losses. Mr. Hayward at once abandoned his livery business and began experimenting with processes for making this rubber wholly merchantable. In 1836, at Woburn, he found that when the rubber goods he was making were exposed to the fumes of sulphur, they not only became bleached, which was his desire, but were so hardened that they could not be made soft with moderate warmth. This was the real foundation of the Goodyear patent for vulcanization. Had Mr. Hayward subjected his rubber, mixed with sulphur, to intense heat, he would have found the whole secret, but as it was he only rubbed powdered sulphur on the exterior of the goods, so that the vulcanization was not complete. In 1837 the industry was prostrate again. In 1838 Charles Goodyear met Mr. Hayward, and both inventors experimented further, without success until Goodyear, accidentally dropping a bit of the rubber on a hot stove, found that it charred and became absolutely vulcanized. A patent was granted to him in 1844, and this was the foundation of the rubber goods industry. But Mr. Hayward claimed priority of invention in the rubber shoe industry as it is now known. The names of other Massachusetts inventors are closely associated with the rubber goods industry, among them that of Edwin M. Chaffee, of Roxbury, who, in 1835, invented the "Monster" calender, which was later bought by Goodyear for old iron. For many years after that, however, it saw useful service. This was the first rubber machinery of importance made in the United States, an improvement on the English calender, and the forerunner of the calenders used in every rubber factory to-day.¹

There were 8 establishments engaged in the manufacture of iron and steel in 1900, with 6,125 wage-earners, and products valued at \$18,491,159. In 1890 there were 15

establishments, 5,210 wage-earners, and products valued at \$11,201,149. The increase in the value of products during the decade was \$2,290,010, or 20.4 per cent.

In colonial days the manufacture of iron received much attention, being stimulated by the existence of native ore beds. The General Court from time to time, in the early years, extended its encouragement by way of special grants and exclusive privileges, toward the establishment of effective operations of iron works in eastern Massachusetts, notably in the vicinity of Lynn, and later the first forge in America was set up at Raynham by James and Henry Leonard, who "were the first adventurers from England to this country who were skilled in the forge-iron manufacture."² The first rolling and slitting mill in New England was erected at Middleboro. There were extensive iron deposits in the western part of the state, and operations upon these were begun at an early date. Iron works in Berkshire county, in the vicinity of Pittsfield, were long engaged in the production of a superior brand of forge iron. But the manufacture of iron from such natural deposits of ore as were found in the state eventually proved impracticable.

There were 696 establishments engaged in the manufacture of lumber in 1900, with 5,202 wage-earners, and products valued at \$12,818,511. In 1890 there were 652 establishments, 6,519 wage-earners, and products valued at \$13,323,708. The decrease in the value of products during the decade was \$505,197, or 3.8 per cent—due to the decline in the branch of the industry which comprises planing mill products, including sash, doors, and blinds.

There were 40 establishments engaged in the manufacture of malt liquors in 1900, with 1,651 wage-earners, and products valued at \$11,255,618. In 1890 there were 26 establishments, 818 wage-earners, and products valued at \$5,855,438. The increase in the value of products during the decade was \$5,900,175, or 110.2 per cent.

There were 120 establishments engaged in the factory manufacture of furniture in 1900, with 6,092 wage-earners, and products valued at \$11,244,503. In 1890 there were 136 establishments, 3,410 wage-earners, and products valued at \$6,166,522. The increase in the value of products during the decade was \$5,077,981, or 82.3 per cent.

There were 54 establishments engaged in the manufacture of electrical apparatus and supplies in 1900, with 5,202 wage-earners, and products valued at \$10,490,361. In 1890 there were 26 establishments, 2,581 wage-earners, and products valued at \$5,762,599. The increase in the value of products during the decade was \$4,727,762, or 82 per cent.

There were 138 establishments engaged in the manufacture of jewelry in 1900, with 5,696 wage-earners, and products valued at \$10,315,334. In 1890 there were 106 establishments, 3,503 wage-earners, and products valued at \$5,507,415. The increase in the value of products during the decade was \$4,807,919, or 87.3 per cent.

Massachusetts ranked third in 1900 among the United

¹ The New England States, Vol. I, page 339 ff.

² Description of Raynham, 1793, by Rev. Dr. Fobes.

States in the manufacture of jewelry, being preceded by Rhode Island and New York; it missed second place in value of products by only a few thousand dollars. Attleboro and North Attleboro have long been centers of this manufacture. Most of the imitation jewelry of the United States is now produced in these places, and in Providence, R. I. The industry at Attleboro began about 1805. The products of the early establishments were chiefly silver spoons, gold beads, and finger rings; afterwards some of them branched out into the manufacture of cheap gold jewelry, silver and other alloys being largely used, with a fraction of gold, while large articles were plated by the hammering process. The industry is based upon a discovery by Nehemiah Dodge, of Providence, R. I., who was the first manufacturer of rolled-plate jewelry, and began business in 1794. His plan was to place a sheet of gold on a copper base, hammer it down on an anvil, and draw it out still thinner with hand rolls. This knowledge soon became public property, and the manufacture spread rapidly to Attleboro, in Massachusetts, only a few miles across the state line. During the years since Mr. Dodge's discovery, numerous new ideas have been grafted on the original stock. Thomas H. Lowe came from Birmingham, England, in 1846, and introduced the manufacture of rolled-plate jewelry by sweating the thin plate of gold on the substratum of base metal, before it was rolled out. This was simpler, better, and more economical, and still further cheapened the price to consumers. The invention by Levi Burdon of the use of seamless wire also changed styles and elevated qualities. By this process, wire, drawn to any degree of fineness desired, is covered with gold. There is no seam to open up and disclose the true character of the material. Metal ornaments and jewelers' findings have also grown into a large industry, and it is said that a single manufacturer can show a thousand different samples.¹

There were 19 establishments engaged in the manufacture of cordage and twine in 1900, with 3,303 wage-earners, and products valued at \$9,635,571. In 1890 there were 32 establishments, 3,351 wage-earners, and products

¹The New England States, Vol. IV, page 2511 ff.

valued at \$10,510,530. The decrease in the value of products during the decade was \$874,959, or 8.3 per cent.

There were 249 establishments engaged in the manufacture of confectionery in 1900, with 2,942 wage-earners, and products valued at \$7,014,532. In 1890 there were 218 establishments, 1,994 wage-earners, and products valued at \$5,291,844. The increase in the value of products during the decade was \$1,722,688, or 32.6 per cent.

There were 388 establishments engaged in the manufacture of carriages and wagons in 1900, with 3,164 wage-earners, and products valued at \$6,118,121. In 1890 there were 430 establishments, 4,131 wage-earners, and products valued at \$7,607,869. The decrease in the value of products during the decade was \$1,489,748, or 19.6 per cent.

In addition to the industries shown in Table 3, there are other industries of importance in the state, some of which can not be shown separately because the establishments number less than 3 and the publication of the figures would disclose the operations of individual establishments. One of these is the manufacture of watches by machinery, which was first suggested in 1850, by A. L. Dennison and Edward Howard, of Boston, whose factory erected in that year was the precursor of the extensive establishment at Waltham, one of the leading enterprises of the state.² The effect upon watch making of this successful application of the principles of machine construction, in improving the products, lessening their cost, and extending their use, is well known.

The manufacture of palm-leaf straw hats in the United States was begun in Massachusetts in 1826, and the straw-goods industry in certain towns of Franklin and Worcester counties originated in this way.

URBAN MANUFACTURES.

Table 4 shows the totals for the manufacturing and mechanical industries of the cities of Boston, Brockton, Cambridge, Chelsea, Fall River, Fitchburg, Gloucester, Haverhill, Holyoke, Lawrence, Lowell, Lynn, Malden, New Bedford, Newton, Salem, Somerville, Springfield, Taunton, and Worcester, as returned at the censuses of 1890 and 1900, with the percentages of increase.

²Progress of the World, page 333.

¹ Decrease.

It appears from Table 4 that there has been a considerable increase during the past decade in the combined manufactures of these 20 cities. The average number of wage-earners increased from 285,174 to 313,851, or 10.1 per cent, and the value of products from \$602,711,864 to \$690,613,521, or 14.6 per cent; but the number of establishments decreased from 18,838 to 17,824, or 5.4 per cent. The percentages of increase in the average number of wage-earners and in the value of products were smaller in these 20 cities than in the state as a whole. The city of Somerville shows the most rapid growth, the value of products having increased from \$7,807,522 to \$21,776,511, or 198 per cent. In Boston, the leading city, the number of establishments decreased from 7,942 to 7,247, or 8.8 per cent; the average number of wage-earners from 78,476 to 72,142, or 8.1 per cent; and the value of products from \$210,936,616 to \$206,081,767, or 2.3 per cent. The number of establishments, number of wage-earners, and value of products, in this city in 1900, constituted 24.8, 14.5, and 19.9 per cent, respectively, of the totals for the state. The decrease in the value of products was due chiefly to the lessened production of men's clothing, factory product, cordage and twine, and furniture, factory product, industries which, under recent conditions, have been concentrated in other localities. In general, excepting these industries, the manufactures of the city increased.

Certain cities in this principal group are largely devoted to particular industries. Fall River, which shows an increase of 32.4 per cent in the value of products; Lawrence, with an increase of 68.4 per cent; Lowell, with an increase of 5.5 per cent; and New Bedford, with an increase of 50.8 per cent, are all textile cities, the differences in their percentages of gain being due in part to the different kinds of goods manufactured. Brockton, with an increase of 25.2 per cent in the value of products, is mainly devoted to the manufacture of boots and shoes. Lynn and Haverhill also are largely engaged in this industry, and each shows a small percentage of decrease in the value of prod-

ucts, which is probably due in part to a decline in the prices of the kinds of shoes made in these 2 cities. Seasonal disturbances, which have a great temporary influence upon this industry, no doubt account in part for the decrease shown. The city of Holyoke, having extensive manufactures of paper and of textiles, shows only a slight increase in the value of products—less than 1 per cent. Worcester, the second city in the state in population, with diversified industries, among which the manufacture of foundry and machine shop products is conspicuous, shows an increase of 34.9 per cent. Cambridge, a city largely residential, but which contains noted establishments devoted to printing and publishing, reported products valued at \$39,164,013, an increase of 8.9 per cent. Chelsea, with an increase of 26.7 per cent in the value of products; Malden, which shows a decrease of 17 per cent; Newton, with an increase of 45.8 per cent; and Somerville, with an increase of 198 per cent, are all cities near Boston, chiefly residential, and sharing, as to growth in population, in the expansion of the metropolis. Nevertheless, as may be seen, the manufacturing interests of these cities are considerable. Salem, one of the oldest cities in the state, and formerly of much commercial importance, reported products valued at \$12,257,449, an increase of 43.8 per cent. Gloucester, the principal seat of the considerable fishing industry of the state, shows an increase of 61.7 per cent in the value of its manufactured products. Fitchburg, Springfield, and Taunton, which are devoted to metal working, the manufacture of foundry and machine shop products, textiles, and various other industries, show increases of 27, 24.4, and 26.7 per cent, respectively.

Table 5 presents the totals for the manufacturing industries of the 118 cities and towns withdrawn from the enumerators, places them in comparison with the totals for the entire state and the state exclusive of these cities and towns, and shows their rank in population and in value of products.

Per cent of urban manufactures to total for state	90.8	93.5	90.9	98.7	94.1	95.9	93.5	93.8			86.2		

¹ Less than one-tenth of 1 per cent.

Of the 29,180 establishments in the state, 26,502, or 90.8 per cent, were located in these 118 cities and towns. They furnished employment to 465,863 wage-earners, or 93.7 per cent of the total for the state; and the value of their products, \$970,598,622, formed 93.8 per cent of the total for the state.

Table 6 shows the totals for the state by counties.

Table 7 shows the totals for the state by specified industries.

Table 8 shows the totals for the cities of Boston, Brockton, Cambridge, Chelsea, Everett, Fall River, Fitchburg, Gloucester, Haverhill, Holyoke, Lawrence, Lowell, Lynn, Malden, New Bedford, Newton, North Adams, Pittsfield, Quincy, Salem, Somerville, Springfield, Taunton, Waltham, and Worcester by specified industries.

Table 9 shows the totals for all industries in the cities and towns withdrawn from the enumerators, exclusive of those shown in Table 8.

MICHIGAN.

Table 1 shows the manufacturing and mechanical industries of the state of Michigan as returned at the censuses of 1850 to 1900, inclusive, with the percentages of increase for each decade. This table also presents the average number of wage-earners employed by manufacturing estab-

lishments, in comparison with the total population of the state, and the value of the land and buildings owned and reported by manufacturers as capital, in comparison with the assessed value of all real estate and improvements.

TABLE 1.—COMPARATIVE SUMMARY, 1850 TO 1900, WITH PER CENT OF INCREASE FOR EACH DECADE.

	DATE OF CENSUS.						PER CENT OF INCREASE.				
	1900	1890	1880	1870	1860	1850	1890 to 1900	1880 to 1890	1870 to 1880	1860 to 1870	1850 to 1860

¹ Decrease.

² Includes proprietors and firm members with their salaries; number only reported in 1900. (See Table 7.)

³ Not reported separately.

⁴ Not reported.

⁵ From assessed valuation made by the Boards of Supervisors, June sessions, 1901.

⁶ Does not include value of rented property.

Table 1 shows that there has been a large growth in the manufacturing and mechanical industries of Michigan during the half century. The population during these years increased from 897,654 to 2,420,982, while the average number of wage-earners employed in manufacturing establishments increased from 9,844 to 162,855, embracing, in 1900, 6.7 per cent of the entire population, compared with 2.3 per cent in 1850. Probably the best indication of the importance of the wage-earning class is afforded by the greatest number employed at any one time during the year. In 1900 this was 232,353, or 9.6 per cent of the total population of the state.

The greatest percentage of increase in the value of products, 262.5 per cent, is shown for the decade ending with 1870, but the greatest absolute increase, \$127,181,681, was between the years 1880 and 1890. The much smaller absolute increase during the decade from 1890 to 1900, \$79,047,876, is due to the decrease in the manufacture of lumber and timber products, by far the most important industry in the state. In 1890, at the close of the decade during which lumbering was at its height, the percentage of wage-earners to total population was 7.1, which is greater than at any other census year included in the half century.

The decrease between 1880 and 1890 in the number of children employed under 16 years of age was 39.5 per cent; during the decade ending with 1900 it was two-tenths of 1.0 per cent. This is attributed to the factory act of 1889, with its later amendments, and to the compulsory school law of 1895.¹ No child under 14 can be employed in any manufacturing establishment. A register containing a sworn statement of the name, age, birthplace, and residence of all employees under 16 must be kept by the employer, to be open to official inspection. The number of women employed over 16 years of age has increased rapidly during the last two decades, a natural result of the increase in the number of industries in which women are employed.

The large increase in the manufacturing industries of Michigan is due to a steady improvement in the means of communication within the state and with the states adjoining; to the growing markets afforded by the rapidly settling West; and to the state's extraordinary forest resources. It is to the Erie Canal that the first rapid advance of Michigan can be attributed;² a close relation

¹ Report of the Michigan Bureau of Labor Statistics, 1898, Appendix, pages 2 and 3.

² History of Michigan, by J. H. Lanman, page 233.

may be traced between the development of transportation and of manufactures in the state. Before 1812 there were no roads worthy of the name. Between 1815 and 1817 a few short military roads were constructed along the Erie shore; after 1825 territorial roads were built by Congress to Saginaw, Fort Gratiot, Sandusky, Miami, and Chicago; and by 1845 the road now known as the Grand River road had become the great highway of the state.¹ These roads, and others constructed under the general plank road act of 1848, had their greatest effect upon manufacturing through the stimulus they gave to the lumber industry. During the first half of the century Michigan was dependent upon Lake Erie for its communication with the East. The greater part of the goods which found their way into western Michigan went around by the lakes, and were poled or rafted up the Grand, Kalamazoo, and St. Joseph rivers, and even up their tributaries.² After the completion, in the fifth and sixth decades, of the Lake Shore, Michigan Central, and Great Western railroads, the latter giving through connection with the eastern seaboard, this primitive method of transportation disappeared and a marked development in business was at once apparent.

¹History of Detroit and Michigan, by Silas Farmer, page 925.

²Michigan Pioneer and Historical Collections, Vol. III, page 283.

The industrial development of the state has been marked by a steady diversification of its manufactures. There has been a moderate localization of manufacturing in the southern half of the Lower Peninsula, due to the special facilities for transportation in this section, to the offering of bonuses on the part of municipalities, and to certain natural advantages, such as good waterpower and soil specially adapted to the growing of raw material like the sugar beet.

The most serious handicap to manufacturing in Michigan is the insufficient supply of coal. There are extensive coal deposits in the central part of the Lower Peninsula, but they are of an inferior quality, and manufacturers at times find it difficult to secure a supply adequate to their demands. The local production of coal, however, has increased steadily since 1896.³ The product for 1899 was 624,708 short tons.

Table 2 divides the industries of the state between the hand trades and the manufactures proper. This table also gives the statistics for educational, eleemosynary, and penal institutions, and establishments with a product of less than \$500; these were not reported at previous censuses, and therefore are omitted from the other tables and their use confined to Table 2.

³United States Geological Survey: Mineral Resources, 1890, Metallic Products, Coal, and Coke, page 463.

TABLE 2.—SUMMARY FOR ALL ESTABLISHMENTS.

CLASSES.	Number of establishments.	Capital.	Proprietors and firm members.	WAGE-EARNERS.		Miscellaneous expenses.	COST OF MATERIALS USED.				Value of products, including custom work and repairing.
				Average number.	Total wages.		Total.	Purchased in raw state.	Purchased in partially manufactured form.	Fuel, freight, etc.	
Total	20,222	\$285,845,087	22,354	163,836	\$66,536,992	\$25,574,235	\$199,906,710	\$48,707,099	\$142,698,419	\$8,501,198	\$358,022,727
Hand trades ¹	6,779	8,231,512	7,661	15,591	7,005,853	1,776,193	11,159,812	132,211	10,720,293	806,868	26,661,198

All other establishments	10,028	275,865,621	11,019	146,764	59,462,014	23,719,230	138,400,593	48,550,106	131,664,625	8,185,862	330,282,884

¹Includes bicycle and tricycle repairing, 810; blacksmithing and wheelwrighting, 1,830; boots and shoes, custom work and repairing, 696; carpentering, 524; clothing, men's, custom work and repairing, 703; clothing, women's, dressmaking, 367; dyeing and cleaning, 50; furniture, cabinetmaking, repairing, and upholstering, 172; lock and gun smithing, 42; masonry, brick and stone, 163; millinery, custom work, 705; painting, house, sign, etc., 404; paper hanging, 81; plastering and stuccowork, 39; plumbing, and gas and steam fitting, 295; sewing machine repairing, 7; taxidermy, 3; watch, clock, and jewelry repairing, 438.

Of the 20,222 establishments of all classes shown in this table, 10,186, or 50.4 per cent, were small shops included in the groups of "hand trades" and "establishments with a product of less than \$500." The value of the products of these establishments, consisting principally of the sums received for custom work and repairing, amounted to

\$27,519,500, or only 7.7 per cent of the total value of the products of the state.

In addition to the 20,222 active establishments in the state during the census year, with a capital of \$285,845,087, shown in Table 2, there were 139 idle establishments, with a capital of \$2,861,192, divided as follows:

INDUSTRIES.	Number of idle establishments.	Capital.	INDUSTRIES.	Number of idle establishments.	Capital.
Boxes, wooden packing	2	\$20,125	Lumber and timber products	17	\$427,772
Brick and tile	20	135,390	Lumber, planing mill products, including sash, doors, and blinds	4	42,300
Chemicals	2	135,000	Matches	1	40,000
Cheese, butter, and condensed milk, factory product	10	16,945	Musical instruments, pianos and materials	2	27,000
Cooperage	1	50,000	Paper and wood pulp	2	34,307
Flouring and grist mill products	11	87,100	Patent medicines and compounds	1	25,000
Foundry and machine shop products	7	36,865	Paving and paving materials	1	49,746
Fruits and vegetables, canning and preserving	7	73,025	Saddlery and harness	1	15,000
Furniture, factory product	2	80,460	Salt	2	30,800
Grease and tallow	1	50,000	Tin and terra plate	1	529,259
Iron and steel	6	688,981	All other industries	33	63,485
Lime and cement	2	226,141			
Liquors, malt	8	76,551

¹Decrease.

The 15 leading industries of the state in 1900, as shown in Table 3, embraced 8,818 establishments, or 22.7 per cent of the total number in the state; used a capital of \$172,225,897, or 60.6 per cent of the total; gave employment to 81,980 wage-earners, or 50.5 per cent of the total number; and paid \$35,561,887, or 53.5 per cent of the total wages. The value of their products was \$189,517,713, or 53.1 per cent of the total. In the discussion of Table 3, which follows, these industries are ranked with reference to the value of their products.

Table 3 shows that the manufacture of lumber and timber products is the most important industry in the state. The 1,705 establishments reported in 1900 gave employment to 26,199 wage-earners, or 16.1 per cent of the wage-earners employed in the state, and the products were valued at \$54,290,520, or 15.2 per cent of the total value of the products of the state. In 1890 there were 2,124 establishments, 54,808 wage-earners, and products valued at \$88,121,969. The decrease in the value of products during the decade was \$28,831,449, or 34.7 per cent.

The vast pine and hard wood forests of Michigan have constituted the state's most valuable natural resource. During the first half of the century there was a great influx of settlers who were attracted to the oak openings back from Detroit, on the higher land of the interior. Timber was saved by mills in this section for local trade, but the lumber industry may be said to have begun in 1834, when Harvey Williams built the first steam sawmill in the Saginaw Valley. Other small establishments followed in rapid succession, manufacturing chiefly for local markets. With roadbuilding the lumber industry advanced rapidly. At Flint, in 1854, after the opening of a plank road, the prices of lumber nearly doubled. In 1858 a regular logging business was begun at Alpena, 1,000,000 feet of logs being put out that year at \$2 per 1,000 feet, board measure.¹ The industry was at first concentrated along the valleys of the Grand, Saginaw, and Muskegon rivers

¹One Hundred Years of American Commerce, Vol. I, page 197.

and their tributaries, and at lake ports, such as Alpena, Manistee, Ludington, Cheboygan, and Grand Haven. The building of railways between 1870 and 1880 opened up the more inaccessible portions of the northern part of the Lower Peninsula, and many new lumber centers sprang up. A change thereupon took place in the industry. Instead of transporting logs to the mills located on the lake shore and at the mouths of rivers, lumber manufacturers moved their mills to the sources of supply. The Saginaw Valley, the Lake Huron shore, Manistee, Muskegon, and the Upper Peninsula came to be the most important lumber regions. The decline in the industry since 1890 is the inevitable penalty the state has been obliged to pay for the extravagant and wasteful exploitation of its forests in the preceding decades. The production is still great, although large quantities of logs are brought into the state. The industry at Alpena, for example, has been sustained by the importation of logs from Canada.¹ The high-grade woods of the state were the first to be exhausted. Public opinion is now developing in favor of a system of forestry, and a commission has been created looking toward the protection of the forests.

The manufacture of flouring and grist mill products ranks second among the industries of the state, with 765 establishments, 1,423 wage-earners, and products valued at \$23,593,991. In 1890 there were 544 establishments, 1,852 wage-earners, and products valued at \$22,778,829. The increase in the value of products during the decade was \$815,162, or 3.6 per cent. In the earlier decades the number of establishments was large, the absence of adequate means of transportation necessitating the establishment of mills for every small market. In recent years the industry has tended to localize at points which possess superior waterpower or shipping facilities. Grand Rapids, Detroit, Adrian, Greenville, Coldwater, Saginaw, and Niles are important milling centers.

There were 364 establishments engaged in 1900 in the manufacture of foundry and machine shop products, the industry third in rank, with 13,502 wage-earners, and products valued at \$20,615,864. In 1890 there were 260 establishments, 7,892 wage-earners, and products valued at \$13,363,030. The increase in the value of products during the decade was \$7,252,834, or 54.3 per cent. This industry is well distributed throughout the state. In addition to the principal centers, which are Detroit and contiguous towns on the Detroit River, Grand Rapids, Saginaw, Bay City, and Jackson, there are many other centers of growing importance, including Battle Creek, Kalamazoo, Lansing, Muskegon, Manistee, and Marquette.

There were 124 establishments engaged in the factory manufacture of furniture in 1900, with 11,870 wage-earners, and products valued at \$14,614,506. In 1890 there were 116 establishments, 8,688 wage-earners, and products valued at \$10,767,038. The increase in the value of products during the decade was \$3,847,468, or 35.7 per cent. Grand Rapids is conspicuous as one of the great furniture centers

of the world. Second in the state stands Detroit, and the industry is carried on also in Muskegon, Saginaw, Owosso, Holland, Pentwater, Bingham, Sturgis, Plymouth, and Big Rapids. There is a tendency toward localization and an increase in the size of establishments, notably at Grand Rapids, the value of whose furniture products in 1900 was \$7,494,607. The first cabinet shop in that city is said to have been established in 1849 by Abraham Snively.² Abundant waterpower, and a river draining areas covered with both pine and hard wood, gave the industry a sudden and rapid growth. Although the waterpower is now of much less importance, and the timber is becoming exhausted, so that large quantities are imported, the impetus given by these early natural advantages has been maintained by the utilization of new resources. The most important of these are the unique method of sale by photographs, the invention and use of special furniture cars, and the establishment of great semiannual fairs at Grand Rapids. Buyers are thus attracted from a widely extended area, and the tendency toward centralization is accentuated.³

There were 235 establishments engaged in the manufacture of planing mill products in 1900, with 5,281 wage-earners, and products valued at \$12,469,532. In 1890 there were 230 establishments, 4,788 wage-earners, and products valued at \$10,007,603. The increase in the value of products during the decade was \$2,461,929, or 24.6 per cent. While the manufacture of lumber and timber products has decreased, the manufacture of planing mill products has increased. In consequence of the impairment of the timber supply of the state, the attention of lumber manufacturers, especially in Saginaw, has been turned to the finer forms of wood manufacture. Other important cities in the planing mill industry are Detroit, Grand Rapids, Marquette, Bay City, Lansing, Kalamazoo, Jackson, and Owosso.

There were 299 establishments engaged in the manufacture of carriages and wagons in 1900, with 4,890 wage-earners, and products valued at \$11,205,602. In 1890 there were 407 establishments, 2,893 wage-earners, and products valued at \$5,699,941. The increase in the value of products during the decade was \$5,505,661, or 96.6 per cent. From 1880 to 1890 there was an increase in the number of establishments, but since 1890 there has been a marked decrease, due to the inability of many small establishments to survive in competition with those producing on a large scale. The nearness of this industry to raw materials, as compared with the vehicle manufacturing centers of some of the other states, an increasing local and neighboring market, and excellent shipping facilities have influenced its growth and localization. The cities chiefly interested in the manufacture of carriages and wagons are Grand Rapids, Flint, Jackson, Detroit, Pontiac, and Lansing.

There were 4 establishments engaged in the manufacture of steam railroad cars in 1900, with 3,187 wage-

²Report of the Michigan Bureau of Labor Statistics, 1900, page 69.

³Ibid., page 76.

¹Bulletins of Farmers' Institutes, 1896-1897, page 38.

earners, and products valued at \$9,920,780. In 1890 there were 5 establishments, 3,723 wage-earners, and products valued at \$11,078,281. The decrease in the value of products during the decade was \$1,157,501, or 10.4 per cent. This decrease is due to the consolidation of large establishments located in Detroit with similar establishments in other states, and the resultant redistribution of production.

There were 59 establishments engaged in the manufacture of agricultural implements in 1900, with 1,944 wage-earners, and products valued at \$6,339,508. In 1890 there were 65 establishments, 1,585 wage-earners, and products valued at \$3,955,306. The increase in the value of products during the decade was \$2,384,202, or 60.3 per cent. The cities in which this manufacture is most conspicuous are Albion, Adrian, Battle Creek, Kalamazoo, Greenville, Lansing, Pontiac, Saginaw, and Detroit.

There were 27 establishments engaged in the tanning, currying, and finishing of leather in 1900, with 1,427 wage-earners, and products valued at \$6,015,590. In 1890 there were 20 establishments, 337 wage-earners, and products valued at \$1,743,760. The increase in the value of products during the decade was \$4,271,830, or 245 per cent. This large increase is due chiefly to a radical change in the industry, the hides being transported from centers like Chicago to the place of the tanning bark in Michigan, instead of the bark to the hides.

There were 10 establishments engaged in the manufacture of iron and steel in 1900, with 1,972 wage-earners, and products valued at \$5,902,058. In 1890 there were 19 establishments, 1,427 wage-earners, and products valued at \$5,829,843. The increase in the value of products during the decade was \$72,215, or 1.2 per cent. In spite of this slight increase in the value of products, there has been a marked decrease in the number of establishments, which is explainable by the insufficiency of the coal supply. The high-grade iron ores of the Lake Superior district are available, but iron manufacturing has always shown a tendency to localize near the fuel rather than near the ore.

There were 51 establishments engaged in the manufacture of chemicals in 1900, with 2,897 wage-earners, and products valued at \$5,364,724. In 1890 there were 4 establishments, 1,315 wage-earners, and products valued at \$3,380,388. The increase in the value of products during the decade was \$1,984,336, or 58.7 per cent. This is an industry of growing importance, and is carried on chiefly in Detroit. Prior to 1880 its rank in census statistics was very low.

There were 29 establishments engaged in slaughtering and meat packing in 1900, with 456 wage-earners, and products valued at \$5,337,417. In 1890 there were 30 establishments, 329 wage-earners, and products valued at \$3,998,978. The increase in the value of products during the decade was \$1,338,439, or 33.5 per cent. Prior to

1890 this industry was inconsiderable, but it has had a favorable development during the last decade. The chief centers are Detroit and Bay City.

There were 77 establishments engaged in the manufacture of malt liquors in 1900, with 980 wage-earners, and products valued at \$5,296,825. In 1890 there were 78 establishments, 687 wage-earners, and products valued at \$2,979,258. The increase in the value of products during the decade was \$2,317,567, or 77.8 per cent. The growth of this manufacture has been steady, keeping pace with the increasing local demand. Detroit is now the chief center.

There were 42 establishments engaged in car construction and general shop work of steam railroad companies in 1900, with 3,938 wage-earners, and products valued at \$4,332,927. In 1890 there were 17 establishments, 2,098 wage-earners, and products valued at \$2,645,314. The increase in the value of products during the decade was \$1,687,613, or 63.8 per cent.

There were 27 establishments engaged in the manufacture of paper and wood pulp in 1900, with 2,014 wage-earners, and products valued at \$4,217,869. In 1890 there were 31 establishments, 1,219 wage-earners, and products valued at \$2,919,166. The increase in the value of products during the decade was \$1,298,703, or 44.5 per cent. The increasing publishing and book-making industries furnish a good market, and the completion of the Sault Ste. Marie power canal, near the source of raw material, and now in process of construction, will offer great advantages for pulp manufacturing at that point.

In addition to the industries included in Table 3, attention may be called to the manufacture of beet sugar. There were 9 establishments engaged in this industry in 1900, with 473 wage-earners, and products valued at \$1,602,266. There were no establishments in operation in 1890. Michigan ranked second in the United States in this industry in 1900, the value of its products constituting 21.9 per cent of the total for the United States. The manufacture of beet sugar on a small scale was unsuccessfully attempted in Michigan as early as 1838.¹ The natural conditions were found to be favorable, but large capital, efficient machinery, and an advanced system of agriculture were wanting. Within the past ten years these deficiencies have been supplied, and Michigan has been able to reap the benefits of its natural advantages for raising sugar beets.

URBAN MANUFACTURES.

Table 4 shows the totals for the manufacturing and mechanical industries of the cities of Bay City, Detroit, Grand Rapids, Jackson, Muskegon, and Saginaw, as returned at the censuses of 1890 and 1900, with the percentages of increase.

¹Blois' Gazetteer, 1838, page 110.

STATISTICS OF MANUFACTURES.

TABLE 4.—COMPARATIVE SUMMARY, BAY CITY, DETROIT, GRAND RAPIDS, JACKSON, MUSKEGON, AND SAGINAW, 1890 AND 1900, WITH PER CENT OF INCREASE.

	Year.	Number of establishments.	Capital.	WAGE-EARNERS.		Miscellaneous expenses.	Cost of materials used.	Value of products, including custom work and repairing.

	1890	31.4	37.3	42.4	49.8	50.4	45.3	47.2

1 Decrease.

It appears from Table 4 that there has been an increase during the past decade in the combined manufactures of these 6 cities. The number of establishments increased from 3,802 to 5,018, or 32.0 per cent; the average number of wage-earners from 63,053 to 75,682, or 20.0 per cent; and the value of products from \$131,229,582 to \$155,523,588, or 18.5 per cent. The percentage of increase in the number of establishments and the value of products has been smaller in these 6 cities than in the state as a whole. Jackson shows the most rapid growth, the value of products having increased from \$5,376,347 in 1890 to \$7,587,526 in 1900, or 41.1 per cent. In Detroit, the leading manufacturing city, the number of establishments increased from 1,746 to 2,847, or 63.1 per cent; the number of wage-earners from 34,535 to 45,707, or 32.3 per

cent; and the value of products from \$77,851,546 to \$100,892,833, or 30.4 per cent. The number of establishments, number of wage-earners, and value of products in this city in 1900 constituted 16.9, 28.2, and 28.3 per cent, respectively, of the totals for the state. In Bay City, Muskegon, and Saginaw, lumber manufacturing, which shows a decline during the decade, has been the dominant industry. The decrease in the value of products, in cities shown in Table 4, is limited to these 3 cities.

Table 5 presents the totals for the manufacturing industries of the 63 cities and villages withdrawn from the enumerators, places them in comparison with the totals for the entire state and the state exclusive of these cities and villages, and shows their rank in population and in value of products.

¹ Less than one-tenth of 1 per cent.

Of the 16,807 establishments in the state, 9,679, or 57.6 per cent, were located in these 63 cities and villages. They furnished employment to 117,504 wage-earners, or 72.4 per cent of the total number, and the value of their products, \$243,448,473, formed 68.2 per cent of the total for the state. Certain of the cities included in Table 5 have become centers of important industries: Kalamazoo for axles, beet sugar, carriages and carriage springs, corsets, machinery, paper, and blank books; Jackson for carriages, corsets, machines, oil stoves, tools, and wheels; Battle Creek for agricultural implements (especially threshing machines), books, health foods (for which it has established a national reputation), machinery, and pumps; Flint and Pontiac for carriages and wagons and carriage and

wagon materials; Port Huron for engines, machinery, steel ships, and wood pulp; and Lansing for agricultural implements, beet sugar, carriages and wagons, display fixtures, furniture, stoves, and wheelbarrows. Products of some of these industries are exported.

Table 6 shows the totals for the state by counties.

Table 7 shows the totals for the state by specified industries.

Table 8 shows the totals for the cities of Bay City, Detroit, Grand Rapids, Jackson, Kalamazoo, Muskegon, and Saginaw by specified industries.

Table 9 shows the totals for the cities and villages withdrawn from the enumerators, exclusive of those shown in Table 8.

MINNESOTA.

Table 1 shows the statistics of the manufacturing and mechanical industries of the state of Minnesota as returned at the censuses of 1850 to 1900, inclusive, with the percentages of increase for each decade. This table also presents the average number of wage-earners employed by manufacturing establishments, in comparison with the total population of the state, and the value of the land and buildings owned and reported by manufacturers as capital, in comparison with the assessed value of all real estate and improvements.

TABLE 1.—COMPARATIVE SUMMARY, 1850 TO 1900, WITH PER CENT OF INCREASE FOR EACH DECADE.

	DATE OF CENSUS.						PER CENT OF INCREASE.				
	1900	1890	1880	1870	1860	1850	1890 to 1900	1880 to 1890	1870 to 1880	1860 to 1870	1850 to 1860

Per cent of assessed value	10.0	8.0	(2)	(2)	(2)	(2)	(2)	(2)	(2)	(2)	(2)

¹ Includes proprietors and firm members, with their salaries; number only reported in 1900. (See Table 7.)

² Not reported separately.

³ Decrease.

⁴ Not reported.

⁵ Exclusive of 9,408 Indians and other persons on Indian reservations, which classes were not included at previous censuses.

⁶ As given for the year 1899, in the Legislative Manual, State of Minnesota, 1901, page 601.

⁷ Does not include value of rented property.

Table 1 shows that there has been a steady growth in the manufacturing and mechanical industries of Minnesota during the half century. The population during these years increased from 6,077 to 1,741,986, while the average number of wage-earners employed in manufacturing establishments increased from 63 to 77,234, embracing, in 1900, 4.4 per cent of the entire population, compared with 1 per cent in 1850. Probably the best indication of the importance of the wage-earning class is afforded by the greatest number employed at any one time during the year. In 1900 this was 118,509, or 6.5 per cent of the total population of the state. The greatest absolute increase in the value of products, \$115,968,280, is shown for the decade ending with the year 1890.

The development of Minnesota's manufactures is due in

part to its native forests of white and Norway pine and to its fertile valleys for the growing of grain; to its water-power; to cheap transportation by way of the Great Lakes; to the early construction of railroads connecting the state with the agricultural sections of the West and Southwest, and with the great centers of population of the East and South; to its geographical position; and to its corporation laws.

Table 2 divides the industries of the state between the hand trades and the manufactures proper. This table also gives the statistics for educational, eleemosynary, and penal institutions, and establishments with a product of less than \$500; these were not reported at previous censuses, and therefore are omitted from the other tables and their use confined to Table 2.

STATISTICS OF MANUFACTURES.

¹Includes bicycle and tricycle repairing, 200; blacksmithing and wheelwrighting, 1,862; boots and shoes, custom work and repairing, 468; carpentering, 454; clothing, men's, custom work and repairing, 525; clothing, women's, dressmaking, 494; dyeing and cleaning, 23; furniture, cabinetmaking, repairing, and upholstering, 162; lock and gun smithing, 32; masonry, brick and stone, 155; millinery, custom work, 970; painting, house, sign, etc., 287; paper hanging, 34; plastering and stuccowork, 54; plumbing, and gas and steam fitting, 194; sewing machine repairing, 5; taxidermy, 8; typewriter repairing, 6; watch, clock, and jewelry repairing, 315.

Of the 13,021 establishments of all classes shown in this table, 7,037, or 54 per cent, were small shops included in the groups of "hand trades" and "establishments with a product of less than \$500." The value of the products of these establishments, consisting principally of the sums received for custom work and repairing, amounted to

\$30,299,069, or only 11.5 per cent of the total value of the products of the state.

In addition to the 13,021 active establishments in the state during the census year, with a capital of \$167,842,210, shown in Table 2, there were 59 idle establishments, with a capital of \$4,296,797, divided as follows:

INDUSTRIES.	Number of idle establishments.	Capital.	INDUSTRIES.	Number of idle establishments.	Capital.
Agricultural implements.....	1	\$1,909,812	Ironwork, architectural and ornamental.....	1	\$500,000

The 11 leading industries of the state in 1900, as shown in Table 3, embraced 2,500 establishments, or 22.5 per cent of the total number in the state; used a capital of \$110,654,790, or 66.7 per cent of the total; gave employment to 35,862 wage-earners, or 46.4 per cent of the total number; and paid \$17,528,938, or 49.4 per cent of the total wages. The value of their products was \$177,172,025, or 67.5 per cent of the total. In the discussion of Table 3, which follows, these industries are ranked with reference to the value of their products.

Table 3 shows that flour and grist milling is the most important industry in the state. The 512 establishments reported in 1900 gave employment to 4,086 wage-earners, or 5.3 per cent of the wage-earners employed in the state, and their products were valued at \$83,877,709, or 31.9 per cent of the total value of the products of the state. In 1890 there were 307 establishments, 3,509 wage-earners, and products valued at \$60,158,088. The increase in the value of products during the decade was \$23,719,621, or 39.4 per cent. This is a greater absolute increase than is shown for any other industry.

In 1900 Minnesota had 11 per cent of the total capital invested in the manufacture of flouring and grist mill products in the United States, and led the states in this regard. In 1890 this percentage was 9.4, New York and Pennsylvania preceding in the order named. The value of the products of the Minnesota mills in 1900 was 15 per cent of the total value of the flouring and grist mill products of the United States. In 1890 this percentage was 11.7. In 1900 no other state approached Minnesota's total, New York, the second in rank, having a value aggregating a little more than one-half.

The first manufactory established in Minnesota was a sawmill, constructed in 1821 for the use of the United States garrison at Fort Snelling.¹ It stood upon the west side of the falls of St. Anthony, in what is now a part of the city of Minneapolis. In 1823 it was fitted up for grinding flour, at an expense of \$270.33 for the millstones and the cost of transporting them from St. Louis. The labor of erecting this mill and placing the stones in position was performed by the garrison, with no additional outlay. From this beginning have developed two of the greatest manufactures of the state—the milling of flour and grist and the sawing of lumber and timber. These, with the manufacture of planing mill products, furnished a trifle over one-half of the value of the manufactured products of the state in 1900.

The development of the flour and grist milling industry was very slow. For a long time little faith was placed in the future of Minnesota agriculture, and for many years the state did not raise sufficient wheat to feed its own population.² The second gristmill was erected in 1843, but, like the one built twenty years before, it had no bolting apparatus. The first bolting cloth was introduced in 1846 by Mr. Samuel Bowles, a miller in Washington

county. The development began about 1858, in which year the first considerable shipments of wheat were made to other states. Wheat raising was stimulated by the high price which prevailed during the early sixties. The wheat then raised in Minnesota was the same variety as is now grown in that state, and was known as spring wheat. By the methods of milling in general use prior to 1870, the hard outer covering of this wheat was more or less pulverized, and passed through the bolting cloth with the flour. As a result, the flour made from spring wheat was darker than that made from winter wheat, and made a darker bread, while the fine particles of bran mixed with the flour attracted moisture in hot or damp climates, so that the flour soon spoiled. Therefore, it could not be readily exported. For these reasons its value was considerably less than that of flour manufactured from winter wheat. In the markets of Chicago and Buffalo 5 bushels of spring wheat seldom sold for as much as 4 bushels of winter wheat of the same general grade.³

Prior to 1870 practically all of the flour of the world was made by what is now known as the old process of low grinding, in which the upper millstone was set low, or very close to the lower, and the wheat was reduced to flour by one operation. Between 1870 and 1890 this method of making flour gave place to what is usually called the new process of milling, or the manufacture of flour by medium high grinding. This, in turn, gave way to the use of rollers.

The new process of making flour was introduced into the United States by Mr. N. La Croix, a French millwright who settled at Faribault, Minn., about 1860.⁴ It attracted little attention until after the destruction by flood of his small mill, when he removed to Minneapolis and entered the service of Mr. Christian, who at once adopted his method. Other millers of that city soon followed, and thereafter the growth of the milling industry was phenomenal. The mills attracted the wheat of the state to the village by the Falls of St. Anthony, and in a few years, with the accompanying stimulus to other trades and industries, created a flourishing city. The new process spread over the United States and attracted the attention of the world. Large quantities of flour were exported, whereas previously very little had found a foreign market, the exports of breadstuffs being chiefly in the shape of grain.

Briefly outlined, the new process as introduced consisted of reducing grain to flour by two or more successive and distinct grindings. As a result of the first grinding, the grain was reduced to small particles or granules. The resulting chop, as it is called, was passed through the bolting apparatus and separated into its component parts, flour, middlings, and bran. The flour thus obtained was of an inferior grade. The middlings, containing the more valuable portion of the wheat, were reground on separate stones. Later, rollers were substituted for stones, but the

¹ Report of the Minnesota Bureau of Labor Statistics, 1891-1892, page 165.

² *Ibid.*, page 166.

³ Report of the Minnesota Bureau of Labor Statistics, 1891-1892, pages 190 to 221.

⁴ *Ibid.*, page 172.

principle governing their use remains substantially the same as in the system of high grinding with stones. It is the gradual reduction of the grain to flour by a number of distinct processes, instead of by one grinding, as was the time-honored custom. By this system the bran is removed as completely from spring wheat flour as from flour made from winter wheat. With this change, spring wheat flour at once began to sell for a higher price than flour made from winter wheat, for it was richer in gluten and otherwise more valuable. The relative prices which the two kinds of wheat had commanded were reversed. The average price of Minnesota wheat advanced to from 20 to 30 cents a bushel above the price of wheat grown in most other states. This advance was shared by the wheat growers of the Dakotas and northern Wisconsin; hence the rapid development of that section under the stimulus of the new process of milling. The millers of Minneapolis obtained their power from the Falls of St. Anthony, and found markets for their products at a profit not realized by the flour makers of any other section. The increase in the number of mills during the past decade has been principally outside of Minneapolis. However, the mills of that city have, by the introduction of new and improved milling machinery, greatly increased their capacity.

The manufacture of lumber and timber products ranks second among the industries of the state, with 438 establishments, 15,140 wage-earners, and products valued at \$48,585,161. In 1890 there were 392 establishments, 16,170 wage-earners, and products valued at \$25,075,132. The increase in the value of products during the decade was \$18,510,029, or 73.8 per cent. This industry was started in 1821, two years before the milling industry began. It led the latter industry until La Croix's invention stimulated the production of wheat in the Northwest and advanced milling to the foremost place among the manufacturing industries of Minnesota. Minnesota is one of the leading lumber-producing states of the nation, its characteristic products being white and Norway pine. Within its borders the state now includes, in all probability, a greater quantity of merchantable forest pine than any other state. The timber country is studded with innumerable small lakes and streams, many of them connected with the St. Louis and Cloquet rivers, or with Lake Superior. The Minnesota lumber mills are also reached by large rafts of logs from the northern and southern shores of Lake Superior. In 1900 the quantity of lumber sawed in the state, including custom sawing but not including lath, shingles, etc., was 2,342,338,000 feet; in Minneapolis, the great center of lumber manufacture in the state, it was 623,000,000 feet.

There were 596 establishments engaged in the factory manufacture of cheese, butter, and condensed milk, the industry third in rank, with 740 wage-earners, and products valued at \$8,479,896. In 1890 there were 106 establishments, 783 wage-earners, and products valued at \$2,958,476. The increase in the value of products during the decade was \$5,521,420, or 186.6 per cent. One of the features of the revolution in Minnesota agriculture in the past thirty years is the development of the dairy industry.

This growth has been accompanied, in the last twenty years, by a marked increase of cheese, butter, and condensed milk factories, which in 1880 numbered only 27, with a capital of \$71,149, and products valued at \$62,094. This increase marks the growth of dairying on farms, and the substitution of a system of diversified farming for the old single-crop husbandry. The great value of the products reflects the fact that Minnesota butter, like Minnesota flour, is an important adjunct to the prosperity of the farmers and the development of the state.

There were 20 establishments engaged in slaughtering and meat packing in 1900, with 668 wage-earners, and products valued at \$7,810,555. In 1890 there were 18 establishments, 222 wage-earners, and products valued at \$2,510,431. The increase in the value of products during the decade was \$5,300,124, or 211.1 per cent. The slaughtering industry has shown even greater development in the last decade than the making of butter and cheese in factories. Its development is due in part to the factors that have contributed to the growth of the dairy industry, and in part to the favorable location of St. Paul and Minneapolis with reference to the slaughtering of cattle from the great ranges of the far West.

There were 39 establishments engaged in car construction and general shop work of steam railroad companies in 1900, with 4,700 wage-earners, and products valued at \$6,319,876. In 1890 there were 18 establishments, 1,951 wage-earners, and products valued at \$2,628,174. The increase in the value of products during the decade was \$3,691,702, or 140.5 per cent. The marked increase in this industry is a result of the growth of the state's commercial cities, which are the centers of numerous and rapidly developing lines of railroads.

There were 175 establishments engaged in the manufacture of foundry and machine shop products in 1900, with 3,139 wage-earners, and products valued at \$5,975,077. In 1890 there were 92 establishments, 1,289 wage-earners, and products valued at \$2,835,024. The increase in the value of products during the decade was \$3,140,053, or 110.8 per cent. Few industries in the state show a greater progress than this. The increased use of iron and steel in all industries, and the transportation facilities of the 3 leading cities of Minnesota, contributed to its rapid and continuous growth. Minnesota has vast deposits of red hematite. Only one state in the Union mined more iron ore in 1899 than Minnesota, and yet very little has ever been smelted within the state, because there are no coal and limestone deposits in proximity to the ore.

There were 560 establishments engaged in the printing and publishing of newspapers and periodicals in 1900, with 2,714 wage-earners, and products valued at \$5,790,148. In 1890 there were 341 establishments, 2,143 wage-earners, and products valued at \$4,157,026. The increase in the value of products during the decade was \$1,633,122, or 39.3 per cent. The growth of the 3 commercial cities, Duluth, Minneapolis, and St. Paul, has been attended by a natural development of the newspaper business in these cities and also in the minor cities of the state.

There were 78 establishments engaged in the manufacture of malt liquors in 1900, with 856 wage-earners, and products valued at \$4,456,928. In 1890 there were 66 establishments, 548 wage-earners, and products valued at \$2,206,866. The increase in the value of products during the decade was \$2,250,562, or 102 per cent.

There were 61 establishments engaged in the manufacture of planing mill products, including sash, doors, and blinds, in 1900, with 1,639 wage-earners, and products valued at \$3,988,276. In 1890 there were 54 establishments, 2,530 wage-earners, and products valued at \$4,943,451. The decrease in the value of products during the decade was \$955,175, or 19.3 per cent.

There were 16 establishments engaged in the manufacture of boots and shoes, factory product, with 2,025 wage-earners, and products valued at \$3,615,801. In 1890 there were 8 establishments, 1,099 wage-earners, and products valued at \$2,032,814. The increase in the value of products during the decade was \$1,582,987, or 77.9 per cent. When, in the decade 1870-1880, the shoemaking industries, centralized in Massachusetts, began to develop in other sections, Minnesota profited by the change, and in 1880 had 5 factories. The facilities furnished by the manufacturing centers of Minnesota for securing raw

materials at a low cost for transportation, and the natural advantages of the same centers for marketing the goods in flourishing agricultural communities, have assisted in this development.

There were 5 establishments engaged in the manufacture of linseed oil in 1900, with 155 wage-earners, and products valued at \$3,272,598. In 1890 there were 3 establishments, 90 wage-earners, and products valued at \$1,547,719. The increase in the value of products during the decade was \$1,724,879, or 111.4 per cent. The stimulus given to agriculture by the introduction of the new process of milling wheat has been followed, in many parts of the state, by a radical revolution in the methods of agriculture, which is reflected in manufactures. Flaxseed has been found most profitable when rotated with other cereals, and its cultivation has led to the establishment of linseed-oil mills at the centers of wheat milling.

URBAN MANUFACTURES.

Table 4 shows the totals for the manufacturing and mechanical industries of the cities of Duluth, Minneapolis, and St. Paul, as returned at the censuses of 1890 and 1900, with the percentages of increase.

STATISTICS OF MANUFACTURES.

TABLE 4.—COMPARATIVE SUMMARY, DULUTH, MINNEAPOLIS, AND ST. PAUL, 1890 AND 1900, WITH PER CENT OF INCREASE.

	Year.	Number of establishments.	Capital.	WAGE-EARNERS.		Miscellaneous expenses.	Cost of materials used.	Value of products, including custom work and repairing.

¹ Decrease.

It appears from Table 4 that there has been an increase during the past decade in the manufactures of the 3 principal cities of the state. Although the number of establishments decreased from 4,443 to 4,392, or 1.1 per cent, the average number of wage-earners increased from 43,297 to 48,199, or 11.3 per cent, and the value of products from \$124,769,770 to \$160,113,030, or 28.3 per cent.

In Minneapolis, the leading manufacturing city in the state, the number of establishments decreased from 2,723 to 2,368, or 13 per cent, but the number of wage-earners increased from 23,703 to 26,608, or 12.3 per cent, and the value of products from \$82,922,974 to \$110,943,043, or 33.8 per cent. The number of establishments, number of wage-earners, and value of products in this city in 1900 constituted 21.3, 34.5, and 42.2 per cent, respectively, of the totals for the state. Minneapolis leads in two of the most important manufacturing industries of the state, the manufacture of flour and grist mill products, and the manufacture of lumber and timber products. It was in these industries that the city found the first important factors in its development. Minneapolis holds a prominent position also in the manufacture of foundry and machine shop products, malt liquors, and linseed oil.

In St. Paul the number of establishments increased from 1,442 to 1,591, or 10.3 per cent; the number of wage-earners from 16,279 to 17,593, or 8.1 per cent; and the value of products from \$33,035,073 to \$38,541,030, or 16.7 per cent. St. Paul early became the principal northwestern depot of the Hudson Bay Fur Company, and from that beginning it has developed into an important fur manufacturing center. It also leads the cities of the state in the factory manufacture of boots and shoes, and of men's clothing; in the printing and publishing of newspapers and periodicals; and in railroad repair shop work.

Duluth made the greatest gains in number of establishments, capital, number of wage-earners, and wages. The city is an important center for the manufacture of lumber. In 1900 the quantity sawed in Duluth was 305,000,000 feet, the product of what is known as the Duluth district being much larger.

Table 5 presents the totals for the manufacturing industries of the 27 cities and villages withdrawn from the enumerators, places them in comparison with the totals for the entire state and the state exclusive of these cities and villages, and shows their rank in population and in value of products.

¹Exclusive of 9,408 Indians and other persons on Indian reservations, which classes were not included at previous censuses.

Of the 11,114 establishments in the state, 6,112, or 55 per cent, were located in these 27 cities and villages. They furnished employment to 61,880 wage-earners, or 80.1 per cent of the total for the state; and the value of their products, \$205,170,094, formed 78.1 per cent of the total for the state.

Table 6 shows the totals for the state by counties.

Table 7 shows the totals for the state by specified industries.

Table 8 shows the totals for the cities of Duluth, Minneapolis, and St. Paul by specified industries.

Table 9 shows the totals for all industries in the cities and villages withdrawn from the enumerators, exclusive of those shown in Table 8.
