SPECIAL REPORTS

CENTRAL ELECTRIC LIGHT AND POWER STATIONS

1902

PREPARED UNDER THE SUPERVISION OF WILLIAM M. STEUARD
CHIEF STATISTICIAN FOR MANUFACTURES

BUREAU OF THE CENSUS
LIBRARY
WASHINGTON
GOVERNMENT PRINTING OFFICE
1905
CONTENTS.

Letter of transmittal

CHAPTER I.

Scope and Method of Investigation.

Central electric light and power stations
Other sources of electric current
Recent origin of the industry
Effect of recent discoveries
Period covered
Basis of classification of stations
Classification according to population
Classification according to dynamo capacity

CHAPTER II.

Summary and Analysis of Results.

General totals
Isolated and railway plants
Comparison of the statistics of private and municipal stations
Ownership of stations
Relation of leading items to geographic divisions
Distribution of stations, by states
Distribution of stations according to population of places in which located
Distribution of stations according to dynamo capacity
Concentration in large cities
Character of service
Work of pioneer stations
Places served exclusively by municipal stations
The consolidation of lighting stations and other enterprises
Comparison of gas and electric lighting
Combination of gas and electrical interests
Comparison with census of 1890

CHAPTER III.

Financial Operations.

I. Capital stock and funded debt
Private stations
Overcapitalization
Return on investment
Preliminary expenses provided for out of capitalization
Capital stock and funded debt, by states
Stocks and bonds held by parent companies
Bonds of municipal stations

II. Cost of construction and equipment
General discussion—private stations
Cost of construction during the year—private stations
Unit of comparison
Cost of construction and equipment of private stations
Cost of construction and equipment of municipal stations
CONTENTS.

III. General discussion of income and expenses ............................................. 21
   Basis of income .......................................................... 21
   Miscellaneous income ................................................. 22
   General statistics of income ........................................ 22
   General statistics of expenses ...................................... 23
   Income and expenses of stations, classified according to population of places in which located 23
   Income and expenses of stations, classified according to dynamo capacity 26

IV. Income ............................................................................. 28
   General analysis of income ............................................. 28
   Income of private stations, by states ................................ 28
   Income of municipal stations, by states .......................... 29
   Income from lighting ..................................................... 29
   Basis of income from arc lamps ...................................... 30
   Basis of income from incandescent lamps ......................... 31
   Income per lamp of stations, classified according to dynamo capacity 31
   Income per lamp of stations, classified according to population of places in which located 35
   Income from sources other than lighting .......................... 38
   Rates for motor service .................................................. 38
   Income of private stations from stationary motors ............ 39
   Income of private stations from electric railway motor service 39
   Income of private stations from electric heating and charging automobiles 39
   Income of private stations from all other electric service .... 40
   Income of private stations from all other sources .............. 40
   Miscellaneous income of municipal stations ...................... 40
   Income of stations, classified according to population of places in which located 41
   Income of stations, classified according to dynamo capacity 43
   Average income per horsepower of dynamo capacity ........... 46
   Average income per kilowatt hour .................................. 47
   Cost and income of stations, classified according to kind of power used 48
   Income in the leading cities ............................................ 50
   Lamp per capita and income ........................................... 52

V. Expenses ........................................................................... 52
   General analysis of expenses ........................................... 52
   Cost of supplies and materials ....................................... 52
   Cost of power purchased ................................................ 53
   Cost of fuel ...................................................................... 54
   Miscellaneous expenses .................................................. 55

CHAPTER IV.

EMPLOYEES, SALARIES, AND WAGES.

I. Salaried officials and clerks ............................................. 56
   General statistics .......................................................... 56
   Statistics for private stations ......................................... 56
   Statistics for municipal stations .................................... 57

II. Wage-earners .................................................................... 57
   General statistics .......................................................... 57
   Classification of wage-earners according to occupation ....... 57
   Statistics for private stations ......................................... 57
   Statistics for municipal stations .................................... 58

III. Daily wages ................................................................. 59
   Specified daily rates of pay ............................................ 59
   Median rates of pay ....................................................... 59
   Daily wages and median rates, by states ......................... 62

CHAPTER V.

PHYSICAL EQUIPMENT.

General divisions ............................................................. 64
Ownership of equipment .................................................... 64

I. Equipment of power and generating plants ....................... 64
   General statistics of power plants .................................. 64
   General statistics of steam engines ................................ 64
   Auxiliary steam engines ................................................ 65
   Steam engines in stations, classified according to population of places in which located and dynamo capacity 66
   General statistics of water wheels ................................ 66
CONTENTS.

I. Equipment of power and generating plants—Continued. ........................................ Page
Water wheels in private stations ................................................................. 66
Water wheels in municipal stations ............................................................... 67
Water wheels in stations, classified according to population of places in which located and dynamo capacity .... 67
Equipment of stations, classified according to the kind of power used .................. 67
Generating equipment ..................................................................................... 68
Classification of dynamos .............................................................................. 68
General statistics of generating plants ............................................................ 68
Dynamos in private stations ........................................................................... 69
Dynamos in municipal stations ....................................................................... 70
Dynamos in stations, classified according to population of places in which located and dynamo capacity .......... 70
Substation equipment ...................................................................................... 70
General statistics of substation equipment ...................................................... 71
Storage batteries ............................................................................................. 71
Transformers .................................................................................................... 72
Other apparatus ............................................................................................... 72
II. Line construction ......................................................................................... 72
General discussion .......................................................................................... 72
Statistics and ownership of mains and feeders ................................................. 72
Line construction, by states and territories ....................................................... 73
III. Service line equipment .............................................................................. 73
Transformers .................................................................................................... 73
Transformers of private stations ..................................................................... 73
Transformers of municipal stations .................................................................. 74
Classification of meters .................................................................................. 74
Meters in private stations ................................................................................ 74
Meters in municipal stations .......................................................................... 74
Lighting apparatus ........................................................................................... 75
General statistics of arc lamps ....................................................................... 75
Classification of arc lamps ............................................................................ 75
Arc lamps of private stations .......................................................................... 75
Arc lamps of municipal stations ..................................................................... 75
Arc lamps of stations, classified according to population of places in which located and dynamo capacity .......... 75
General statistics of incandescent lamps ......................................................... 75
Incandescent lamps of private stations .......................................................... 75
Incandescent lamps of municipal stations ...................................................... 77
Incandescent lamps of stations, classified according to population of places in which located .................... 78
Use of stationary motors ................................................................................. 78
General statistics of stationary motors ........................................................... 79
Motors of private stations ............................................................................... 79
Motors of municipal stations .......................................................................... 79

CHAPTER VI.

OUTPUT OF STATIONS.

Measurement of output ................................................................................... 80
Loss of current in transmission ........................................................................ 80
Irregularity of demand for output ..................................................................... 80
Average output ................................................................................................. 80
Average earnings per kilowatt hour ............................................................... 81
Output of private stations, by states and territories .......................................... 81
Output of municipal stations, by states and territories ...................................... 81

CHAPTER VII.

FRANCHISES.

The granting of charters and franchises .......................................................... 82
Tendency toward combination ........................................................................ 82
Municipal ownership ........................................................................................ 82
Regulations in various states ......................................................................... 83
General statistics ............................................................................................ 83
Duration of contract ......................................................................................... 83
Variety of franchises ........................................................................................ 83
Charters and franchises in Illinois ..................................................................... 84
The work of the board of gas and electric light commissioners in Massachusetts ........................................ 84

LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE AND LABOR,
BUREAU OF THE CENSUS,
Washington, D. C., September 1, 1902.

SIR:

I have the honor to transmit herewith a report on the central electric light and power stations of the United States for the year ending June 30, 1902. This report has been prepared in the Bureau of the Census, under the supervision of Mr. W. M. Steuart, chief statistician for manufactures, in accordance with the provisions of section 7 of the act of Congress of March 6, 1902.

This report is the third of a series of reports on the generation and utilization of electric current. The first related to street and electric railways; the second to municipal electric fire alarm and police patrol service, and was published as Census Bulletin 11; the fourth is now in course of preparation and relates to telephones, telegraphs, and ocean cables.

The data for this report were collected by the regular clerical force of the office and published November 30, 1902, as Census Bulletin 5.

The schedule of inquiry was formulated after consultation with experts and persons identified with the industry in different sections of the country, but the absence of a uniform system of accounting in central electric stations made it impossible to prepare a schedule that could be easily applied to the conditions prevailing in the different plants. Nevertheless, the canvass, as a whole, was satisfactory, and, with a few exceptions, complete returns were secured from all of the central electric stations that were in operation during any portion of the year.

The statistics do not include isolated electric light and power plants installed in manufacturing establishments, hotels, office buildings, etc., for the purpose of furnishing light and power primarily for the use of the individuals, firms, or corporations operating such establishments. The text of the report has been prepared by Mr. Thomas Commerford Martin, of New York city, expert special agent.

Very respectfully,

[Signature]

Hon. Victor H. Metcalf,
Secretary of Commerce and Labor.

Director.
