DEPARTMENT OF THE INTERIOR,  
U.S. CENSUS OFFICE.

ROBERT P. PORTER,  
Superintendent.  
Appointed April 20, 1881; resigned July 31, 1883.

CARROLL D. WRIGHT,  
Commissioner of Labor in charge.  
Appointed October 8, 1889.

REPORT  
ON THE  
SOCIAL STATISTICS OF CITIES  
IN  
THE UNITED STATES  
AT THE  
ELEVENTH CENSUS: 1890.

JOHN S. BILLINGS, M. D.,  
SURGEON UNITED STATES ARMY, EXPERT SPECIAL AGENT.

WASHINGTON, D. C.:  
GOVERNMENT PRINTING OFFICE.  
1895.
CONTENTS.

Letter of transmittal of the Commissioner of Labor in charge to the Secretary of the Interior ........................................ v
Population on June 1, 1890, increase since 1880, and per cent of total population living in cities .................................. 1, 2
Altitude—
Proportion of population living in each altitude, by geographical divisions ................................................................. 3
Average altitude, by population groups and by geographical divisions .......................................................................... 4, 5
Highest, lowest, and average altitude for cities containing 50,000 inhabitants and upward .................................................. 6
Area and Density of Population—
Number of acres, population per acre, number of dwellings per acre, persons to each dwelling, and death rates, by population groups and by geographical divisions, and death rates for each of the 50 larger cities ......................................................... 7, 8
Death rates in each principal city, by wards ......................................................................................................................... 9-12
Comparison of the area, population, and density of population of the principal cities of the United States and foreign countries .................................................................................................................................. 13
Boards of Health—
Membership, number, and percentage of physicians to membership, and average annual expenditures, by population groups and by geographical divisions .......................................................................................................................... 14
Streets and Alleys—
Length, miles paved, percentage paved, population to each mile, kinds of pavement, and average annual cost of construction and repairs, by population groups and by geographical divisions ........................................................................ 15-17
Average annual cost of construction and repairs, and average annual cost of cleaning, for 45 of the larger cities .................. 18
Length, miles paved, materials, percentage paved; number of persons, water mains, hydrants, sewers, and street lamps to each mile of street; building area, and dwellings and persons to each acre, in 48 cities (for streets only) .................................................................................................................................................. 19
Street Lighting—
Number of lamps, annual cost, and population per lamp, by population groups and by geographical divisions ................ 20
Manner and cost of lighting the larger cities in 1880 and 1890, by cities ........................................................................... 21
Population per lamp and cost per capita for cities using electric lights only, and for cities using gas only ........................................ 22
Waterworks—
Sources of supply of water for 286 cities .............................................................................................................................. 22, 23
Distribution of population in relation to source of supply and average daily consumption of water, by geographical divisions ........................................................................................................................................... 23
Average daily consumption and cost of works, by population groups and by geographical divisions .................................. 24
Character of distributing works ................................................................................................................................................... 24
Population to each mile of main, cost of works, average annual cost of maintenance, and average annual receipts from water rents, by population groups and by geographical divisions .................................................................................................................. 25-26
Population to each mile of main and to each tap, number of meters to each 100 taps, cost of works, average annual cost of
maintenance, average annual receipts from water rents, and annual charge for water per dwelling, by cities ........................................ 27
Water supply of German cities .................................................................................................................................................. 28
Sewers—
List of cities having no sewers .............................................................................................................................................. 29-30
Miles of sewers, kind, population to each mile, and cost, by population groups and by geographical divisions .................. 30, 31
Names of cities in each population group making returns, by geographical divisions .......................................................... 32
Relation between waterworks and sewers for the 50 larger cities ......................................................................................... 33
Parks—
City area and park area, by population groups and by geographical divisions ................................................................. 34
Cost of land in parks and cost of improvements, by population groups ................................................................................. 34, 35
Park area, cost of land, and cost of improvements in principal cities .................................................................................. 35
Cemeteries—
Total area, area inside city limits, and interments, by population groups and by geographical divisions .................................. 36, 37
Cemetery area inside city limits and average number of interments, by principal cities ........................................................... 37
CONTENTS.

PUBLIC BUILDINGS—
Cost for construction and cost per capita, by population groups and by geographical divisions
Cost of city halls for construction and per capita, by population groups and by geographical divisions
Cost of city halls for construction and per capita, by principal cities

PLACES OF AMUSEMENT—
Number, percentage of total number, and seating capacity, by population groups and by geographical divisions
Number and seating capacity, by principal cities

SALOONS—
Number and proportion to each 1,000 of population, by population groups and by geographical divisions
Total yearly license for each saloon, by principal cities

PUBLIC VEHICLES—
Total number, number per 1,000 of population, and annual licenses, by principal cities

LICENSED DOGS—
Average annual number licensed, amount of license required for each sex, and number per 1,000 of mean population, by principal cities

FIRE DEPARTMENT—
Number and classification of force, percentage of total force to each 1,000 of population, number of apparatuses, and loss by fire, total and per capita, by population groups and by geographical divisions
Number of apparatuses, fire alarm boxes, total loss by fire for the year, and death rate per 1,000 of force, by principal cities

POLICE DEPARTMENT—
Total force and number of policemen, by population groups and by geographical divisions
Number of policemen, average annual arrests, cost of force, number of dwellings to each policeman, and average annual arrests to each member of the force, by principal cities

SUBURBAN TRAVEL—
Number of trains, number of passengers carried annually, number of commuters, with percentages, by population groups and by geographical divisions
Statistics of suburban travel within a radius of 20 miles, by principal cities

LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR,
CENSUS OFFICE,
WASHINGTON, D. C., November 22, 1894.

SIR:

I have the honor to transmit the following special report upon the Social Statistics of Cities, by Dr. John S. Billings, United States army, expert special agent of the Census Office.

This report pertains to cities of over 10,000 inhabitants. The statistics and illustrations presented have been prepared by Mr. Harry Tiffany and Mr. John D. Leland. The report is made to conform, as far as practicable in its statistical material, to the report upon statistics of cities published in the Tenth Census. It was not practicable to obtain data on certain points in the same form from all cities, owing in part to the varied methods of keeping accounts and of the distribution of functions of city governments.

Very respectfully,

CARROLL D. WRIGHT,
Commissioner of Labor in charge.

The Secretary of the Interior.
