CHAPTER XI.—COLOR, RACE, AND TENURE OF FARM OPERATOR

Introduction.—In the 1950 Census of Agriculture, much of the information was tabulated by four major classifications, viz, (a) size of farm (as measured by total land area in the farm); (b) color and tenure of operator; (c) economic class of farm; and (d) type of farm. Each of the classifications provides a detailed picture of our agricultural resources and the utilization of the resources by different producing groups.

This chapter presents statistics for farms by color, race, and tenure of the farm operator. The statistics by the tenure under which farm operators held the land they operated include such items as number of farms, land in farms, value of land and buildings, land use, operator characteristics, facilities and equipment, farm labor, farm expenditures, principal classes of livestock, major crops, and sales of farm products. In presenting data by tenure, primary emphasis is placed on the number of farms, land in farms, value of land and buildings, and land use.

Statistics by color and race of operator are limited to number of farms, land in farms, land use, and a few other items. Many of the data presented by color are restricted to the Southern States. Data for only a few of the major items are shown separately for Negroes, Indians, and other races comprising the nonwhite group. Most of the data shown by color or by race are presented for each color or race by tenure.

Sources of data.—The data presented are from the 1950 Census of Agriculture with comparative data from earlier censuses. Some of the data shown, particularly those for items presented for commercial farms only, represent estimates based upon reports for only a sample of farms. (See chapter XIII for a definition of commercial and other farms.) All tables which include estimates based on a sample of the farms have a headnote indicating which of the figures represent estimates for a sample. When only a part of the 1950 data in a table are based on the sample, the sample information is shown in italics.

The estimates based on the sample do not agree exactly with the totals for enumerated data for all farms and are subject to sampling errors. Tables giving reliability of estimates, based on the sample, are given in the Introduction to this volume. The Introduction also presents a description of the procedures used in the enumeration and processing of the statistics and of the sampling plan used in 1950.

Presentation of the statistics.—The statistics are presented as totals for the continental United States, for 3 major regions, 9 geographic divisions, and for each of the 48 States and the District of Columbia. An outline map showing the States and the geographic divisions and regions for which totals are shown appears in the Introduction to this volume.

Comparable data from earlier censuses provide a measure of the changes that have taken place from census to census. Most of the available comparative data are shown for the United States. Comparative data for regions, divisions, and States are shown only for selected census years. Headnotes, footnotes, or the wording of the stub or of the column headings indicate any significant lack of comparability with earlier census years which may have resulted from changes in the wording of the

inquiries, in the instructions or definitions, or in the procedures followed in collecting and compiling the data.

Averages, percentages, and other derived data are provided as aids in using and analyzing the statistics. Except for value of farm land and buildings, both totals and derived data are shown for the United States for all items. The values for land and buildings shown by tenure of operator, are on a per-farm and a per-acre basis. Derived data only are shown by divisions and States for some items. The totals on which these derived data have been based may be found in Economic Area Tables 6 and 10 in Volume I.

The tables are supplemented by charts and maps which show graphically some of the more significant facts included in the tables.

Other published data.—Data for counties by color and tenure of the farm operator are shown in Volume I of the 1950 Census of Agriculture reports. Data for counties by tenure of operator include a classification of all farms by tenure showing the number of farms, land in farms, and cropland harvested, and a count of commercial and other farms (part-time, residential, and abnormal), by major tenures. For white and nonwhite operators, only the number of farms is shown for all counties. For all counties in the South and for seven counties in southeastern Missouri, figures for the number of farms, land in farms, and cropland harvested are shown for white and nonwhite operators by tenure.

Data for State economic areas (groups of counties within the State having similar agricultural, demographic, climatic, physiographic, and cultural characteristics) are also shown in Volume I for commercial farms by tenure of operator. These data include number of farms, land in farms, value of land and buildings, land use, operator characteristics, farm facilities and equipment, principal classes of livestock, principal crops, expenditures, and farm labor.

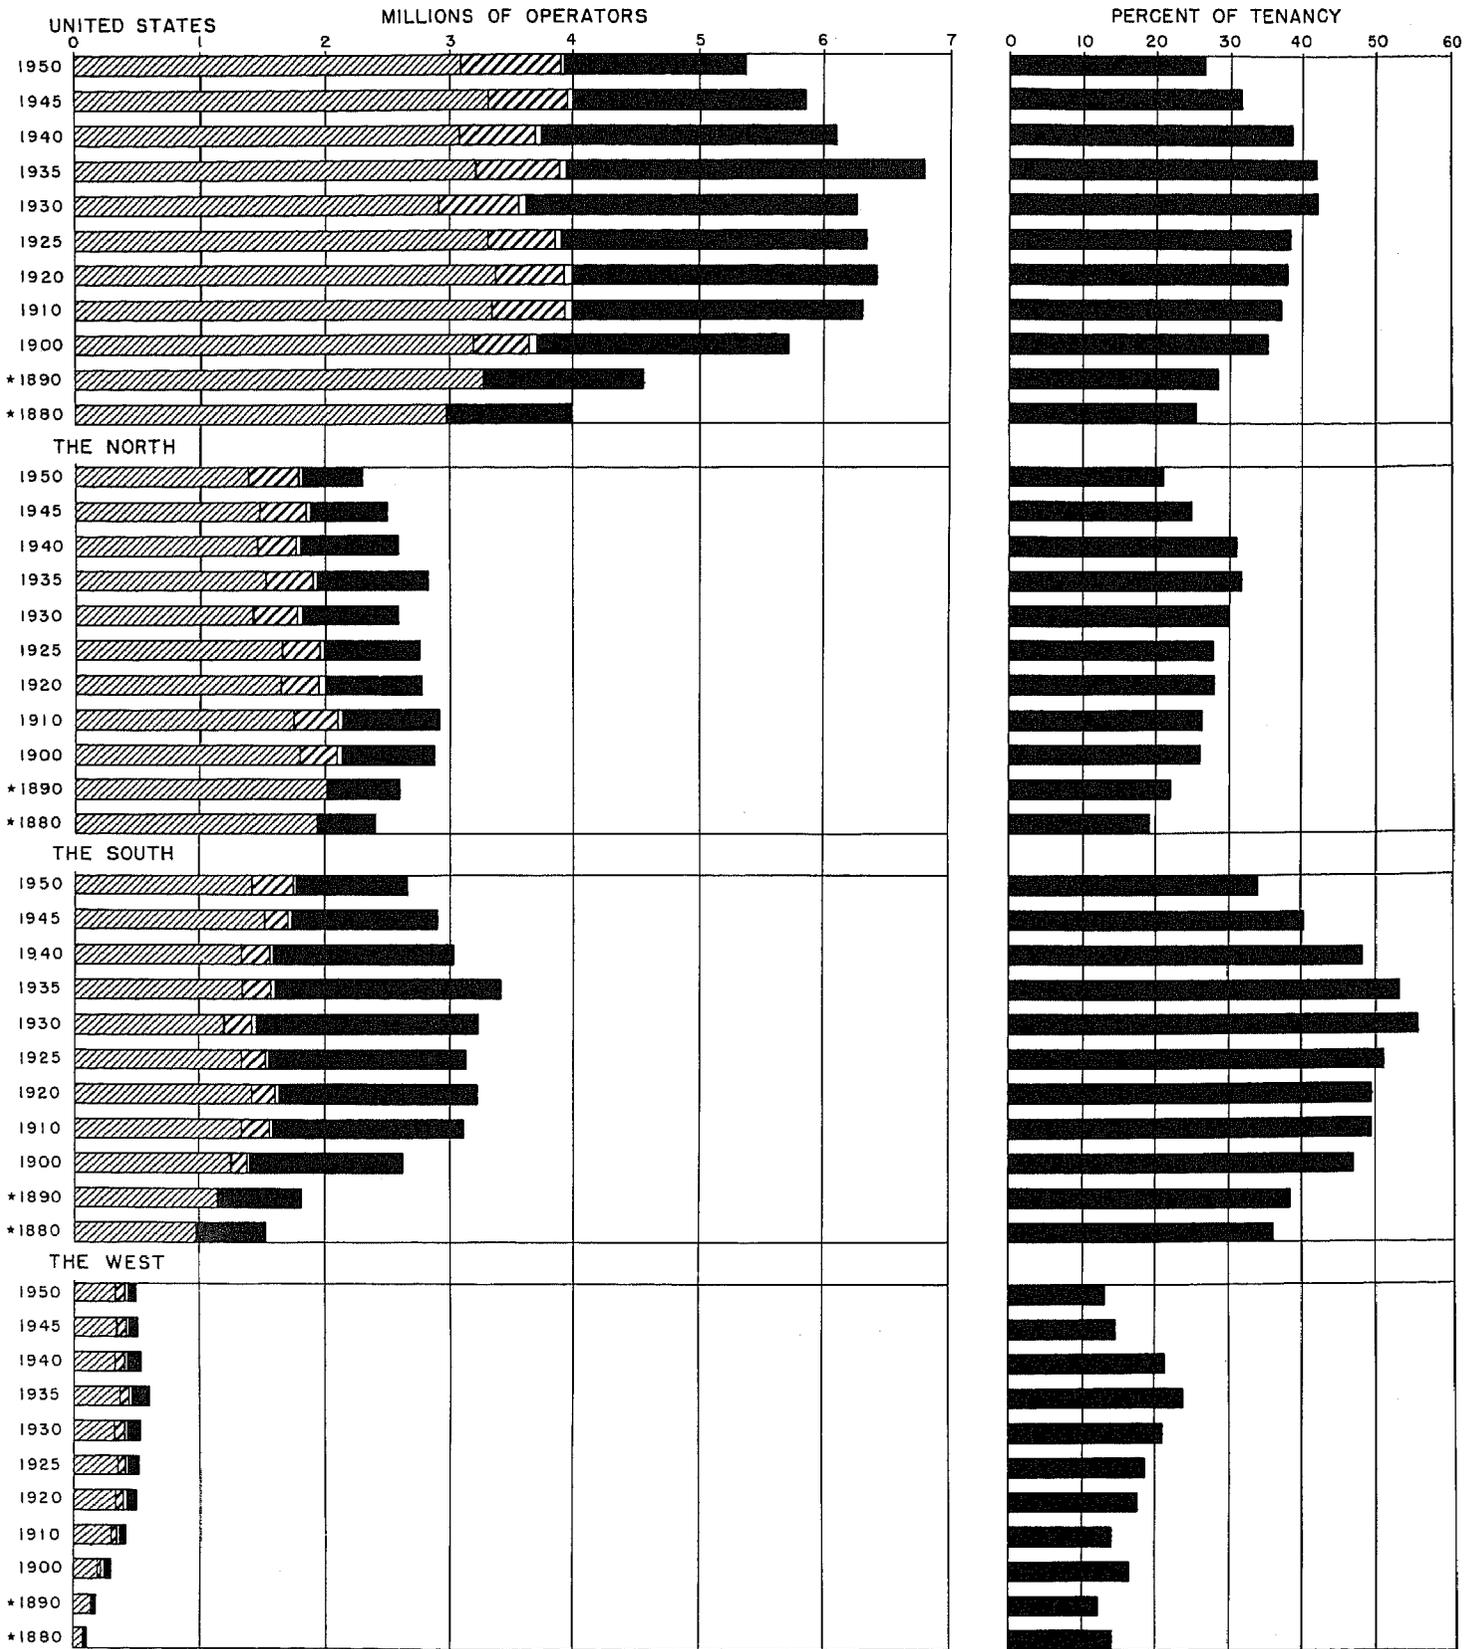

Some data, by color and tenure of the farm operator, not shown in Volume II appear in Volume I. For each of the 48 States, data for number of farms, land in farms, and land use are shown by tenure for white and nonwhite operators in State Table 14 of Volume I. For each of the Southern States, characteristics of commercial farms by tenure are shown for white and nonwhite operators in State Tables 15 and 16. These totals include data for the same items shown for commercial farms by tenure for State economic areas in Volume I. Data relating to hired farm labor and wage rates are shown for each of the Southern States, for farms of white and nonwhite operators, and for the commercial farms for each color by tenure of operator, in State Tables 20 and 25 in Volume I.

Statistics are presented for multiple-unit operations in Volume V, part 2, of the reports for the 1950 Census of Agriculture. A multiple-unit operation is defined as a landlord holding of two or more subunits (Census-defined farms) one of which may consist of land not assigned to tenants, including croppers, but the other subunit or subunits must represent land assigned to croppers.

Statistics regarding farms and farm characteristics by the other major classifications of farms are presented in Chapter X,

"Size of Farm"; Chapter XII, "Economic Class of Farm"; and Chapter XIII, "Type of Farm." A count of commercial farms by tenure of operator was made by size of farm, by type of farm, and by economic class of farm. These counts are shown for the United States in table 20 of this chapter, and for each State in Economic Area Table 10 in Volume I. A percentage distribution of farms by tenure of operator for each economic class of farm is shown for States in chapter XII, and of commercial farms by tenure of operator for each type of farm in chapter XIII of this volume. A percentage distribution of commercial farms by size of farm for each tenure is shown for States in this chapter.

Additional information on characteristics of farm operators by color and tenure of operator appears in chapter II, and on farm labor and wage rates by tenure of operator in chapter IV, of this volume.

A description of the plan of presentation of the data tabulated from the 1950 Census of Agriculture, is given in the Introduction to this volume. Items covered in the census of agriculture are shown by the facsimile of the agriculture questionnaire appearing in the Appendix.

History of Census classifications by color and tenure of farm operator.—Census data were first classified by tenure of the farm operator in the 1880 Census. For the Census of 1880 and that of 1890, only the number of farms was classified by tenure. Classifications by color and race of the farm operator and cross-classifications by color and tenure were first made in the Census of 1900. The classifications and cross-classifications by tenure, color, and race, and the items of information available by these classifications have varied from census to census. In 1880 and 1890, data were published on the number of farms cultivated by owners, the number of farms rented, the number rented for a fixed money rental, and the number rented for a share of products.

The particular tenure classes used for each census and their relation to the 1950 classification are shown in table 1. For all years, the color classification has consisted of two groups, white and nonwhite, with the nonwhite further classified by race for the decennial censuses.

DEFINITIONS AND EXPLANATIONS

Definitions and explanations in this chapter are limited to those which have a particular significance in respect to the presentation of statistics by color, race, and tenure of the farm operator. Definitions and explanations of general application are included in the Introduction to this volume and those for specific items may be found in the chapters of this volume dealing with those subjects. The descriptive terms and explanations refer principally to the 1950 Census of Agriculture, although, in general, they are also applicable to earlier censuses. The definitions consist primarily of a résumé of the questionnaire wording, occasionally supplemented by the more essential parts of instructions and procedures for enumerating and processing the questionnaires. For

the exact phrasing of the inquiries, reference should be made to the facsimile of the 1950 Census of Agriculture Questionnaire shown in the Appendix.

A farm.—For the 1950 Census of Agriculture, places of 3 or more acres were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to \$150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value of sales of agricultural products in 1949 amounted to \$150 or more.

If a landlord had croppers or other tenants, the land assigned each cropper or other tenant was considered a separate farm. Land retained by the landlord and worked by him with the help of family and/or hired labor was likewise considered a farm.

For the 1945 and earlier censuses of agriculture, the definition of a farm was somewhat more inclusive than for 1950. (The Introduction to this volume presents a discussion of the effect of changes in definition of a farm on the number of farms.)

Farm operator.—A "farm operator" is a person who operates a farm, either performing the labor himself or directly supervising it. He may be an owner, a hired manager, or a tenant, renter, or share cropper. If he rents land to others or has land cropped for him by others, he is listed as the operator of only the land which he retains. In the case of a partnership, only one of the partners was considered as the operator. The number of farm operators is considered the same as the number of farms.

Land owned, rented, and managed.—Replies to inquiries on land owned, land rented from others, land managed for others, and land rented to others determined the land to be included in each farm and also provided the basis for the classification of farm operators according to the tenure under which they held the land they operated. For most States, these inquiries were worded as follows:

OWNED LAND:

8. How many acres of land do you OWN?..... None
 (If you own more than one tract of land, INCLUDE ALL (Whole acres)
 not only

LAND RENTED FROM OTHERS:

9. How many acres of land do you RENT FROM others, including any worked on shares?..... None
 (Include any separate fields, meadows, pasture land, woodland, (Whole acres)
 wasteland, etc. Also include land used by you rent free.)
 If "None," check and skip to question **13**

LAND MANAGED FOR OTHERS:

13. How many acres do you operate for others as a HIRED MANAGER?..... None
 (If you manage land for others and also operate land on your (Whole acres)
 own account, fill a separate questionnaire for each operation.)

LAND RENTED TO OTHERS:

14. How many acres are RENTED TO others, including land worked on shares?..... None
 (Include any separate fields rented to others. Land worked by (Whole acres)
 members of your household with your equipment should not be considered as rented to others.)

15. Acres in this Place.—To obtain this acreage, add acres owned (question 8) and acres rented from others (question 9); then subtract the acres rented to others (question 14)..... (Acres)
 (If a hired manager, subtract acres in question 14 from acres in question 13.)

In the West, the wording of the note under the inquiry for land rented from others included an instruction to omit grazing lands used under government permit. In the South, the inquiry on land rented to others stressed the inclusion under this inquiry of land worked on shares by croppers or tenants.

The acres in the farm were obtained by adding the acres owned and acres rented from or worked on shares for others, and subtracting the acres rented to or worked on shares by others. If a farm was operated by a hired manager, the person in charge was

asked the total acreage managed for his employer. From this total managed acreage, was subtracted any of the acreage which was rented to or worked on shares by others.

In earlier censuses, the enumerator was instructed to include as acres in the farm all land rented from others and to exclude all land rented to others. Only that portion of the acreage owned and the acreage rented from others which was retained by the farm operator was to be reported.

For 1950, the replies to the inquiries on land owned, land rented from others, land managed, and land rented to others provided a basis for classifying land in farms according to whether owned, rented, or managed by the farm operator. For operators reporting land owned and no land rented from others (full owners), the owned land operated by the owner was obtained by subtracting any land rented to others. For operators (tenants) who reported land rented from others and no land owned, the rented land operated by the tenants was obtained by subtracting any land subrented to others. Likewise, for operators reporting land managed for others (managers) the managed land operated was obtained by subtracting any land rented to others. However, for operators who both owned land and rented land from others (part owners) there was no way of determining whether land rented to others represented land owned by the operator or land rented by the operator from others.

Land owned.—Land owned includes all land which the operator or his wife, or both, held under title, purchase contract, homestead law, or as one of the heirs, or as a trustee of an undivided estate. For a partnership, all the land owned by any of the partners and operated as a partnership was to be included as land owned. In the case of an Indian operator, land allotted in trust and also any reservation lands assigned him for his own use were to be considered as land owned.

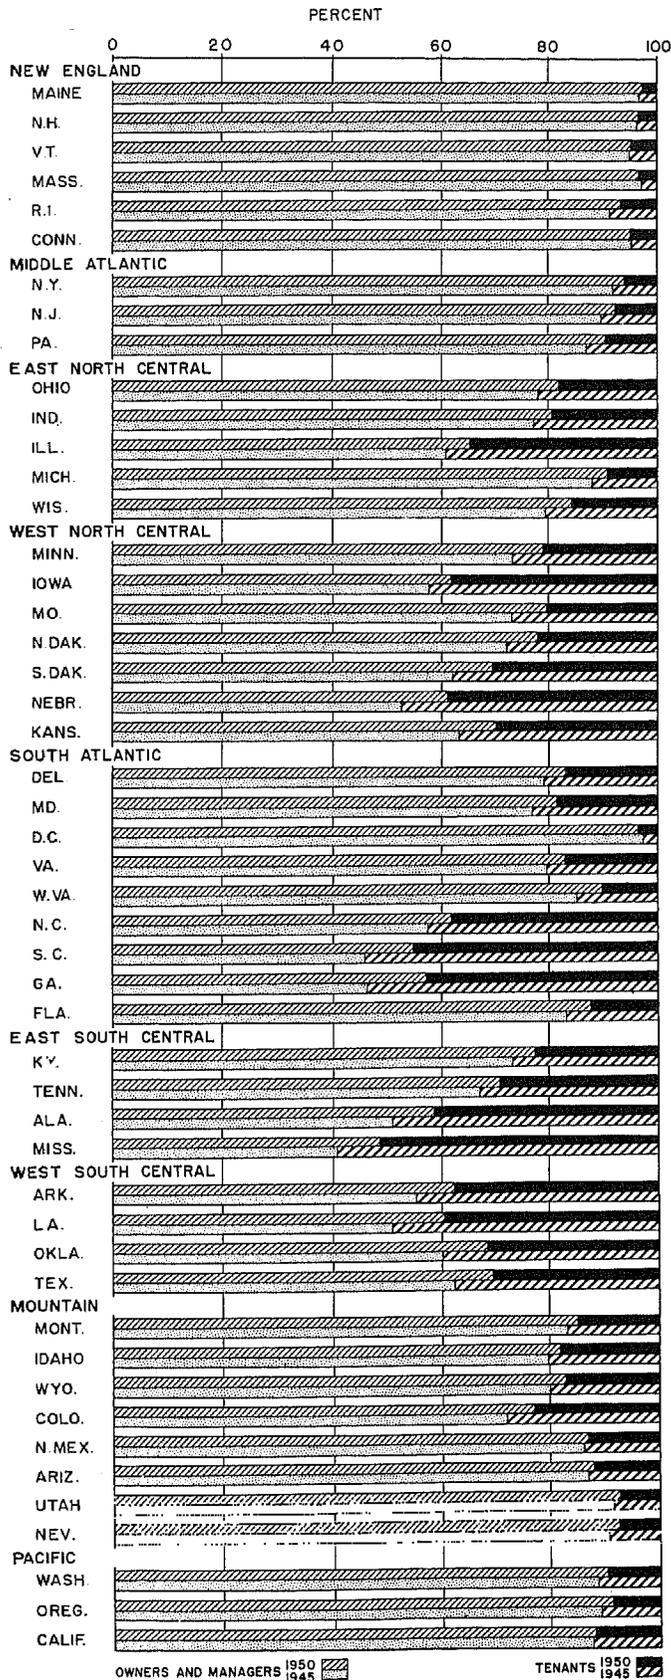

Land rented from others.—Land rented from others includes land worked on shares for others, and land used rent free, as well as all land rented or leased under other arrangements. Grazing land used under government permit was not included. Open range and grazing lands used under permit were not to be included as land in farms.

Land managed for others.—Land managed is land operated under the supervision of a person who is paid a wage or salary to operate the land. All land operated for a government agency (Federal, State, or local), a corporation, or an institution was considered managed, even though no person was specifically designated as the farm manager. Similarly, grazing lands held or controlled by cooperative groups, such as grazing associations, were considered managed. Likewise, Indian reservation lands operated for Indians and not reported by individual Indians were considered managed. Land in Indian reservations not reported by individual Indians or not rented to non-Indians was to be reported in the name of the cooperative group using the land. Thus, in some instances, the entire reservation was reported as one farm.

In the office processing of the questionnaires for the 1950 Census, land was not considered as managed if the person reported as manager appeared to be a caretaker or hired laborer. Land operated for employers other than government agencies, corporations, and institutions, was considered managed only if it represented a large farm or if the value of sales of farm products in 1949 amounted to \$5,000 or more, or the inventory and production items indicated that normally the farm could be expected to produce for sale products amounting to \$5,000 or more. (See the Introduction to this volume for the criteria for specified large farms.)

Land rented to others.—Many farm operators rent land to others. For the most part, the land rented to others represents agricultural lands but it also includes tracts rented for residential

PERCENT DISTRIBUTION OF FARM OPERATORS, BY TENURE, BY STATES: 1950 AND 1945

or other purposes. When land is leased, rented, or cropped on shares, the tenant or cropper is considered the farm operator, even though his landlord may exercise supervision over his operations. The landlord is considered as operating only that portion of the land not assigned to tenants or croppers.

Tenure of operator.—In the 1950 Census, farm operators were classified according to the tenure under which they held their land on the basis of the replies to the inquiries on total land owned, total land rented from others, and total land managed for others.

Owners are farm operators who own land.

Full owners own land but do not rent land from others.

Part owners own land and rent land from others.

Managers operate farms for others and are paid a wage or salary for their services.

Persons acting merely as caretakers or hired as laborers are not classified as managers. Farms operated for institutions or corporations were considered managed, even though no person was specifically designated as the farm manager. If a farm operator managed land for others and also operated land on his own account, the land operated on his own account was considered as one farm and the land managed for others as a second farm. If a farm operator managed land for two or more employers, all the land managed was considered one farm.

Unlike most tenants, a manager usually has no capital invested in the farm business. However, in some instances, he may receive a share of the products or a share of the profits in addition to his salary. A manager differs from a caretaker or hired worker in that the manager has more control over the farm operations.

Tenants rent land from others or work land on shares for others. They do not own land.

A tenant operator may exercise independent management or he may be closely supervised by his landlord. He may own the livestock and equipment, or have them furnished in whole or in part by his landlord, or he may rent work power and other equipment by special arrangement with his landlord. The contractual arrangements between landlords and tenants are extremely varied. At one extreme, the tenant may pay a cash rental and have full control of the land. At the other extreme, he may be assigned to a definite acreage to work under the close supervision of his landlord who provides all the productive resources with the exception of labor. In the latter case, the tenant shares in the risk of making a crop and receives a share of the produce in lieu of a cash wage.

Tenants were further classified on the basis of their rental agreement with the landlord as indicated by the replies to the following inquiries on the questionnaire:

- Does the landlord furnish ALL the work animals or tractor power (as a part of his share in the operation of this place)? No Yes
- (a) Do you pay to your landlord any cash as rent? No Yes
- (b) Do you pay to your landlord any share of the crops? No Yes
- (Such as 1/4, 1/3, 1/2.)
- (c) Do you pay to your landlord any share of the livestock or livestock products? (Such as 1/4, 1/2, 1/3.) No Yes
- (d) Do you have this land under any other arrangement? No Yes
- (A fixed quantity of any product, upkeep of land and buildings, payment of taxes, keep of landlord, rent free, etc.)

Cash tenants pay a cash rental, such as \$10.00 per acre, or \$1,000 for the use of the whole farm.

Tenants were classed as cash tenants if they reported cash paid as rent and no share of crops or livestock paid. This group includes those who rented tracts primarily as places of residence when such tracts qualified as farms under the Census definition.

Share-cash tenants pay a part of the rent in cash and a part as a share of the crops or of the livestock or livestock products.

Share tenants pay a share of either the crops or livestock or livestock products, or a share of both. Share tenants were further classified as—

Crop-share tenants if they paid a share of the crops and no share of the livestock.

Livestock-share tenants if they paid a share of the livestock or livestock products. Livestock-share tenants may or may not also have paid a share of the crops.

Croppers are, in general, crop-share tenants whose landlords furnish all work power. Traditionally, a cropper (a) provides labor (his own and that of his family); (b) works under close supervision of his landlord who provides land, management, work power, and equipment; (c) shares in the risk of production; and (d) receives a share of the crop in return for his labor.

The furnishing of work power by the landlord has been the most satisfactory criterion for the classification of croppers. The use of the single criterion of the furnishing of work power includes as croppers some tenants who do not pay a share of the crop. However, in the South where croppers are numerous, very few tenants other than those paying only a share of the crops have all the work power furnished by the landlord. Moreover, in that area, other tenants with work power furnished generally represent croppers, as they are closely supervised.

Croppers are numerous only in the Southern States and in southeastern Missouri. Therefore, the inquiry as to whether all work power was furnished by the landlord was included on the agriculture questionnaires only for the South and for Missouri. All data presented separately for croppers, except those in table 2, are for the South only. For Missouri, the data for croppers are included with those for crop-share tenants. However, separate data for croppers in 7 southeastern Missouri counties, as a group, are presented in table 2. Data are also shown separately for each of these 7 counties in County Table 2a in Volume I.

Other tenants include those who pay a fixed quantity of any product; those who pay taxes, keep up the land and buildings, or keep the landlord in exchange for the use of the land; those who have the use of the land rent free; and others whose rental arrangement required payment other than cash or of a share of products.

Unspecified tenants include those tenants whose rental agreement was not reported or could not be determined from the information reported.

Comparability of the 1950 tenure data with those for earlier censuses.—The tenure classes as determined for each census are shown in table 1. Corresponding tenure classes for earlier censuses differ from those for 1950 only as to procedure of classification and as to minor differences in definition.

For most of the census years for which tenure data are available, information required for the tenure classification was obtained during the enumeration and the tenure classes were determined on the basis of this information during the office processing, as in 1950. For 1880 and 1890, the enumerator merely indicated whether the farm operator was an owner, whether he rented for fixed money rental, or rented for shares of products. For 1900 and 1910, the enumerator determined the tenure on the basis of definitions provided in his instructions.

For 1920, full owners, part owners, and tenants were determined by specific inquiries on the questionnaire as to whether the operator owned all the land in the farm, owned part but not all, or rented from others all land in the farm. For the Censuses of 1925 to 1945, the classification was determined from inquiries for the acres in the farm owned and for the acres in the farm rented from others. The enumerator was instructed to include as land in farms all land rented from others and to exclude all land rented to others.

The organization of the Agriculture Questionnaire for the 1950 Census affected the comparability of the 1950 data for part owners with those for prior censuses. The questionnaire for 1950 did not provide for the identification of land rented to others as land owned or land rented by the part owner. Part owners in 1950 renting to others all the land owned would have been classified as tenants in prior censuses. Likewise, part owners in 1950 renting to others all the land rented from others would have been classified as full owners in prior censuses. In 1950, of the 824,923 part owners in the United States, 121,920 or 14.8 percent reported land rented to others. Data obtained in the post enumeration survey for the 1950 Census of Agriculture for a sample of 1,050 part owners, indicated that 2.8 percent either rented to others all the land owned or all the land rented. These data also indicated that 1.8 percent of all part owners rented all the owned land to others, and 1.0 percent of the part owners subrented to others all the land rented from others. On the basis of these estimates, based on a very small sample and, therefore, subject to rather large sampling errors, the method used for the 1950 Census resulted in an overstatement of the number of part owners by approximately 23,000. On the basis of procedures used in prior censuses, about 15,000 of these part owners would probably have been classified as tenants and 8,000 as full owners.

For the 1945 and prior censuses, farms were classified as operated by managers on the basis of the answer to the inquiry of the farm operator approximately as follows: "Do you operate this farm as a paid manager?" For 1950, the classification was based on the report as to the number of acres of land managed by the farm operator. The word "manage" or "manager" has been interpreted incorrectly by farm operators and census enumerators in every census. Caretakers, hired workers, and relatives of the farm owner have often considered that they manage the farm on which they were employed. Variations in the interpretation of the inquiry regarding managers, and also in the extent of the review during the office processing of farms classified as operated by managers, have greatly affected the comparability of the number of farms operated by managers from census to census.

The further classification of tenants on the basis of method of rental for the 1920, 1925, 1930, and 1940 Censuses was based upon the description of the kind of rent reported by the census enumerator. For the 1945 Census, enumerators were asked to specify the kind of rent, as cash, share, share-cash, or other. Under this procedure, some enumerators did not always fully report the kind of rent especially in the case of share-cash, or in the case of the rental of pasture land for cash. The failure to report fully the kinds of rent paid in such cases, resulted in an overstatement in the number of cash tenants and share tenants and an understatement in the number of share-cash tenants.

¹ "Owner and tenant" farms were operated jointly by the owner and a tenant working for a share of the products. This tenure class was recognized in the instructions to enumerators for both the 1910 and 1900 Censuses. Inasmuch as the number of such cases was very limited and the owner was often a parent and the tenant a son, this class was consolidated in the 1910 reports with farms operated by their owners.

² For 1935, all tenants other than croppers were published as "Other tenants"; for 1930 and 1925, all tenants other than cash tenants and croppers were published as "Other tenants."

³ See text.

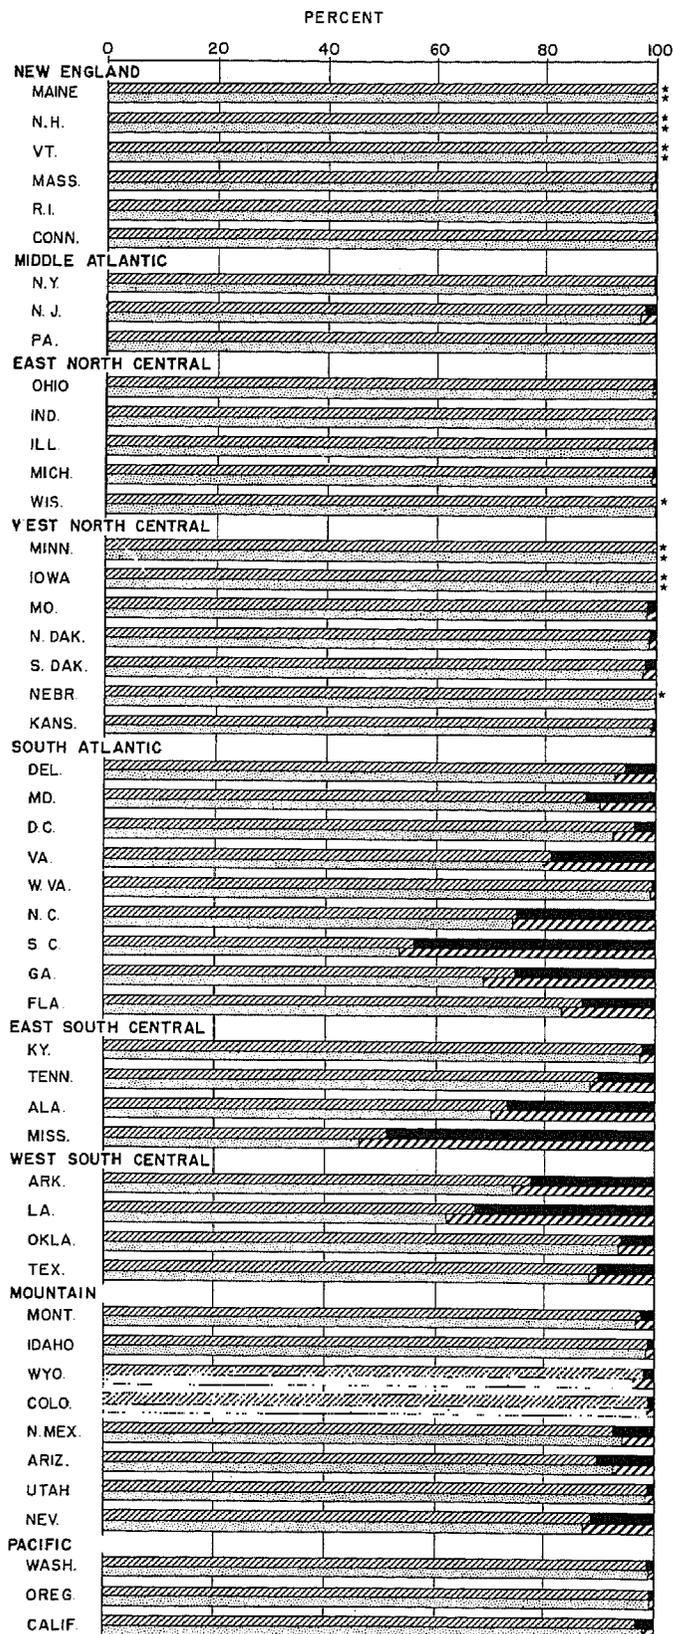

The further classification of tenants on the basis of method of rental for 1950 was made on the basis of the "Yes" or "No" replies to the four inquiries relating to the rental agreement. While the 1950 Questionnaire provided for reporting methods other than the payment of cash or a share of the products, it did not provide for reporting information regarding the kind or amount of such payments.

For the 1880, 1890, and 1900 Censuses, tenants were further classified into only two subclasses, viz, cash tenants and share tenants. For 1880 and 1890, no information is available as to how tenants reporting both cash and share, those reporting a fixed quantity of the farm products, those reporting other miscellaneous methods of payments, or those not reporting method of payment, were classified. For the 1900 Census, tenants reporting a fixed

quantity of the products paid as rent (standing renters) were classified as cash tenants. Those not specifying the method of payment were also included with cash tenants and those paying both cash and a share of products, were classified as share tenants. For both 1900 and 1910, standing renters were classified as cash tenants. For 1920, standing renters for the Northern and Western States were classified as cash tenants, while those for the Southern States were classified separately. Standing renters for 1920 for the South have been combined with other and unspecified tenants, to provide data comparable with 1950. For the 1925, 1930, and 1940 Censuses, standing renters were included with other and unspecified tenants.

Tenants reporting rental payments in cash only were classified as cash tenants for 1920 and 1925. For 1930 and 1940, cash

tenants included, in addition to tenants reporting cash rental payments only, tenants making payments closely akin to cash, such as payment of taxes, repairs, upkeep of the farm, etc.

Share tenants for 1920 and 1940 included tenants reporting a share of products only. Share-cash tenants for 1920 and for 1940 included tenants reporting both cash and a share of the products but no payments other than share or cash. Tenants reporting payments in addition to cash or a share of the products were included with "other" tenants for 1920 and 1940.

Rental payments other than cash or a share of the products were not considered in making the classification of cash tenants, share-cash tenants, or share tenants for 1950.

Generally, tenants have been classified as croppers on the basis of whether work power was furnished. For 1920 and 1930, tenants paying a share of the products as rent and having all work animals furnished by the landlord were classed as croppers. For 1935, the classification of croppers was made entirely on the basis of work power furnished. For 1940 and 1945, tenants paying a part of their rental in cash and a part on a share basis were classed as croppers if all work power was furnished by the landlord. For 1940 and subsequent censuses, tractor power furnished by the landlord has been considered as work power furnished.

The comparability of data by tenure for the various censuses, particularly for small areas, is also affected by the proportion of tenants for whom the rental arrangement was not specified. Other and unspecified tenants represented, for the United States, 10.8 percent of all tenants for 1950; 9.5 percent of all tenants for 1945; and 8.9 percent of all tenants for 1940.

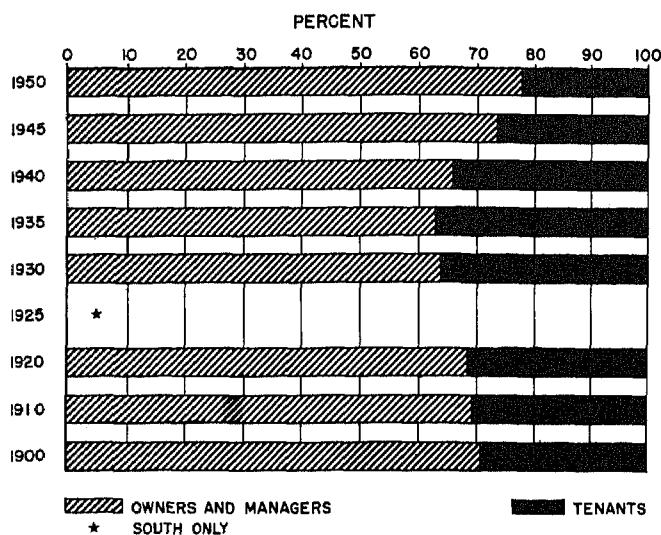

Full owners with grazing permits.—Owner-operators who rent grazing land from others are considered as part owners. Owner-operators who rent no land from others but use grazing lands under a permit are classed as full owners but differ from part owners renting grazing lands only in that the grazing land is used under a permit rather than under a lease arrangement. Information on grazing permits was obtained for 11 Western States. The number of full owners using nonfarm grazing lands under permit from any public agency or grazing association is shown for these 11 States in table 17. These data are shown by counties in County Table 2 in Volume I of the reports for the 1950 Census of Agriculture.

Tenants related to landlord.—All farm operators who rented land from others were asked, "Do you rent any of this land from your own or your wife's parent, grandparent, brother, or sister?" For operators renting from two or more landlords, the inquiry on whether land was rented from a relative referred to any of the land rented. Data for the number of farm operators related to their landlords were tabulated for all part owners and tenants as a group, and for each subclass of tenants. Totals for part owners and tenants related to their landlord are given in Economic Area Table 1, in Volume I. Data for the number of tenants by subclasses related to landlord are published only for States. Figures regarding the number of part owners related to their landlords may be obtained by subtracting data for all tenants from the total for part owners and all tenants.

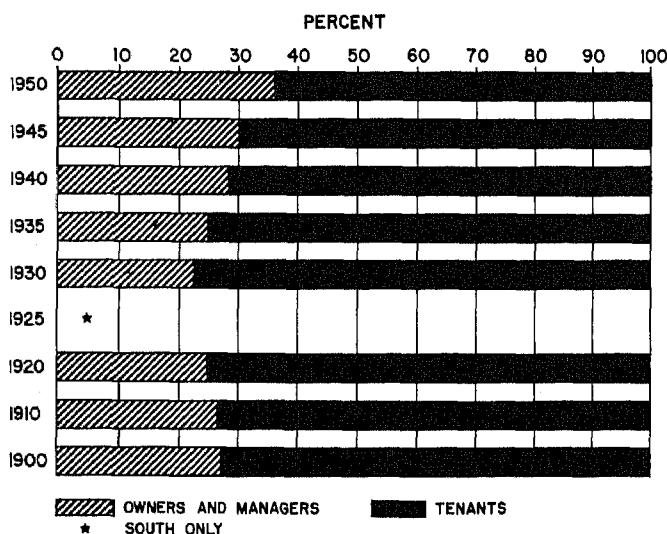

Farm operators with landlord living on farm.—The inquiry on residence of landlord was to be answered separately for each landlord. However, the data presented in this chapter on residence of landlord relate only to the first landlord listed. Data for the number of tenants and part owners with the landlord living on the farm, were tabulated for all part owners and all tenants combined and separately for each subclass of tenants. Figures on the number of all tenants with the landlord living on the farm are shown in County Table 2, of Volume I.

Data for tenants with landlord living on the farm are shown by subclass of tenant only for States. Figures regarding the number of part owners with landlord living on the farm are

not shown separately, but may be obtained by subtracting the total for all tenants from the total for all part owners and all tenants.

Color and race of farm operator.—For 1950, the classification of farm operators by color and race was made on the basis of the answers by the enumerator or by the respondent who filled his own questionnaire to the following inquiry for the farm operator:

What is your race? (a) White
(b) Negro
(Check one) (c) Other; What race? _____

The enumerator was instructed to determine the race by observation and then to check the square for the appropriate race. If the race was other than white or Negro, he was to write in the name of the race.

Color of farm operator.—Farm operators are classified by color as "white" and "nonwhite." Nonwhite includes Negroes, Indians,

Chinese, Japanese, Filipinos, and other nonwhite races, plus operators reported under "other" with the race not specified.

Race of farm operator.—Nonwhite farm operators are classified by race as Negroes, Indians, Chinese, Japanese, Filipinos, and "other and unspecified." The "other and unspecified" group includes minor nonwhite races such as Korean, Hawaiian, Asiatic Indian, persons of mixed white, Negro, and Indian ancestry, and persons designated as "other" with the race not specified.

Table 29 gives a distribution of the nonwhite farm operators by race. The "other and unspecified" group comprised 605 operators for 1950, 24 operators for 1945, and 87 operators for 1940. The number for 1950 is much larger than for prior censuses largely because the name of the race was not always given for other races by the census enumerator.

For 1950, land in Indian reservations used for agricultural purposes and not reported by individual Indians or not rented to non-Indians was considered to be operated by Indians regardless of the color or race of the person reported to be in charge of the operations. In former censuses, such farms were classed as Indian-operated if an Indian was named as the operator and as white-operated if the Indian Agent or some other white person was reported as the person in charge.

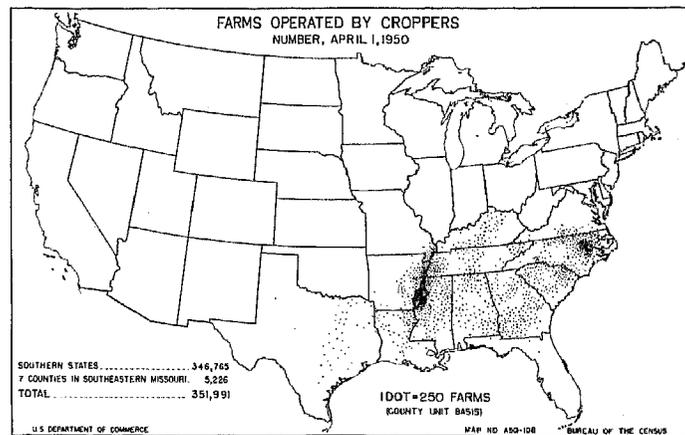

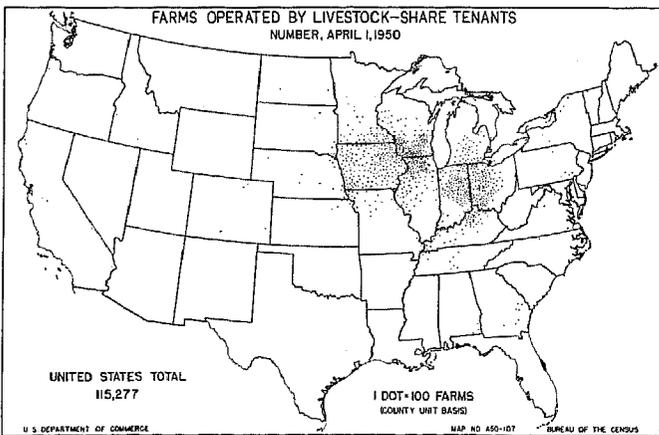

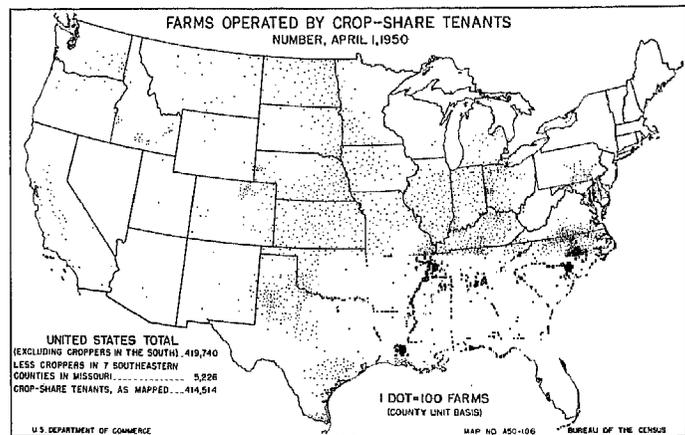

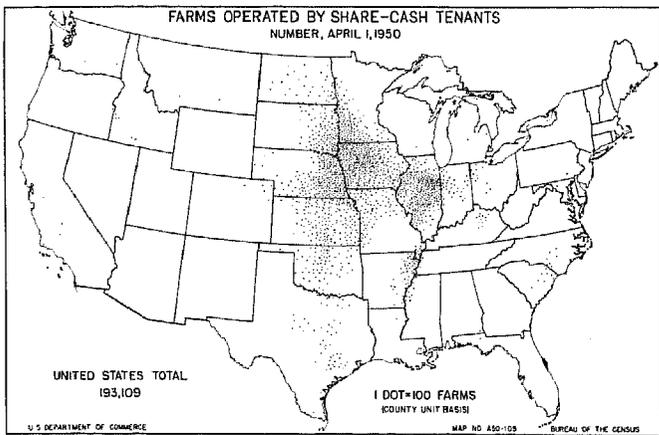

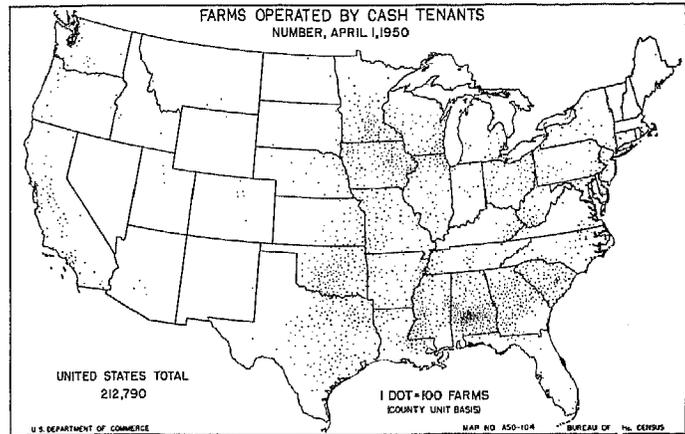

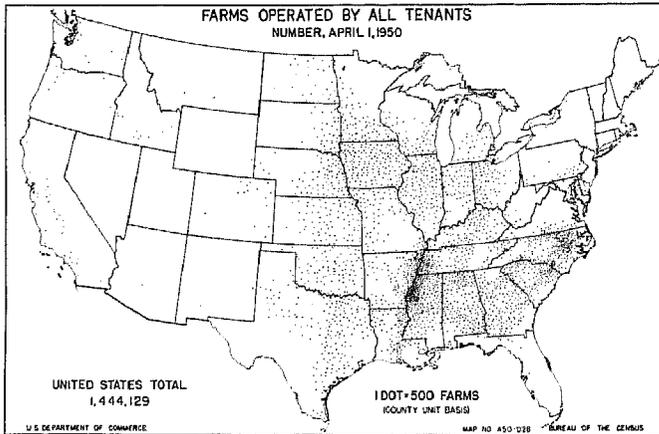

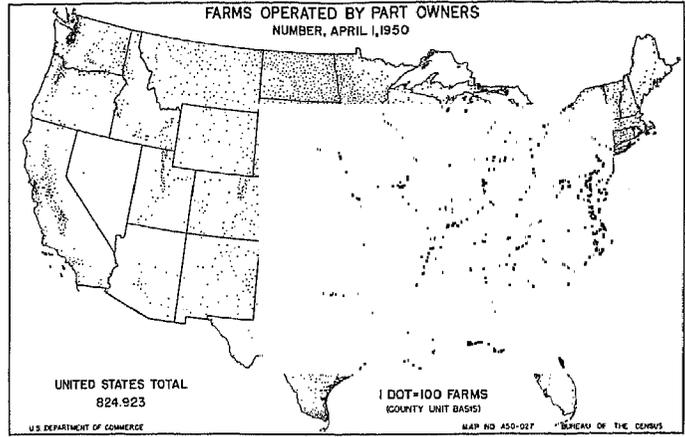

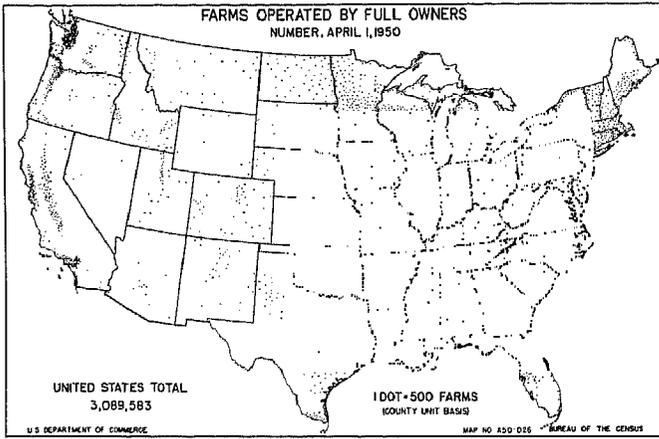

Changes in the number of farms by tenure.—Changes in the Census definition and procedures have affected the number and distribution of farms by tenure of farm operator. Information regarding the effect of the change in the definition of a farm on the total number of farms is given in the Introduction to this volume.

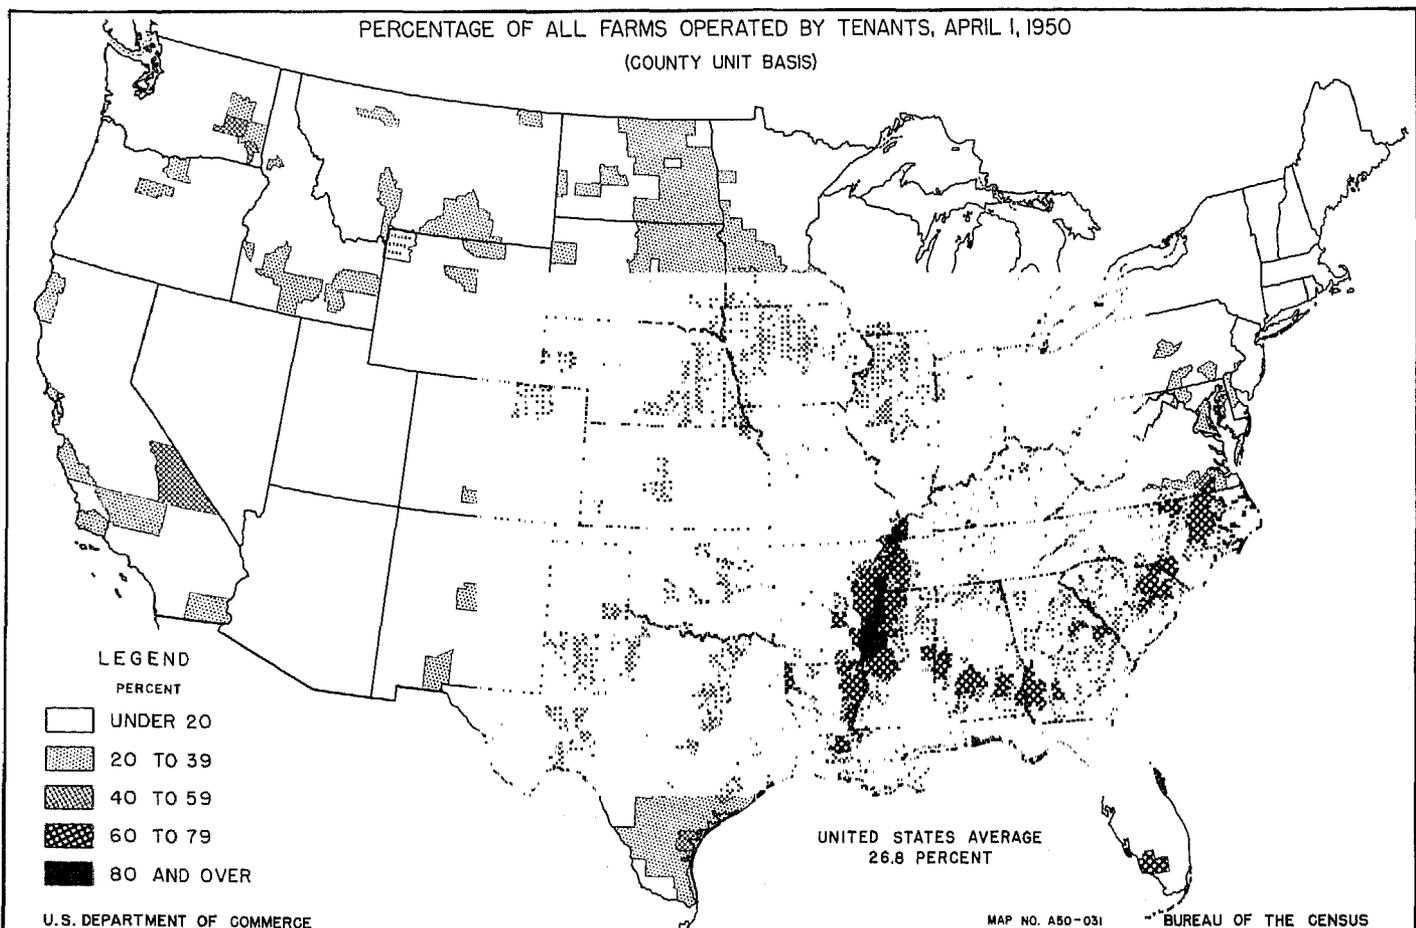

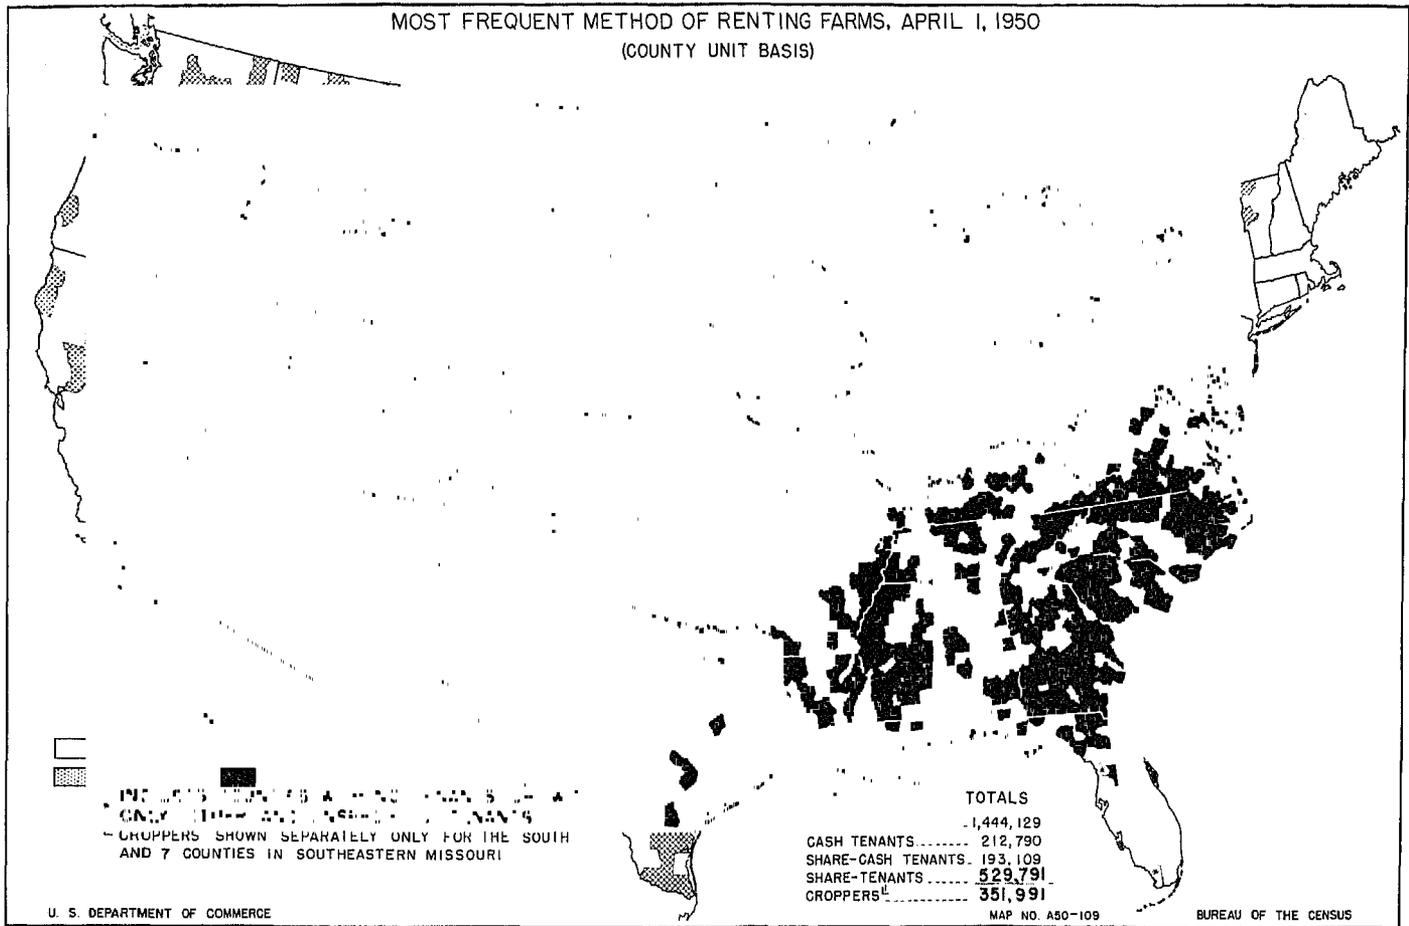

Most of the 150,000 to 170,000 change in the number of farms between 1945 and 1950, resulting from the change in the definition of a farm, represented farms operated by owners. Notwithstanding this decrease in the number of farms because of the change in farm definition, the proportion of farms operated by owners increased from 67.6 percent in 1945 to 72.7 percent in 1950.

The number of part owners in the United States increased from 615,039 in 1940 to 660,502 in 1945 and to 824,923 in 1950. Most of this increase in the 1945-1950 period occurred in the South. The number of part owners in the South was 216,607 in 1940, 193,607 in 1945, and 325,999 in 1950. Some of the increase in the number of part-owner operators may have been the result of the procedure used in 1950 for classifying farms by tenure on the basis of the total land owned and the total land rented from others, instead of on the basis of the land retained, as in 1945. A part of the decrease from 1940 to 1945 and part of the increase from 1945 to 1950 in the number of part owners may have been the result of the procedure followed in 1945 for the enumeration of farm land in multiple units. In 1945, if a farm operator who was operating land as a cropper or a tenant in a multiple-unit operation also operated additional land, two reports were required, as though the land represented two separate farms.

"In 1945 a multiple-unit operation was one in which two or more subunits were handled as a single-farm enterprise. A multiple-unit operation consisted of two or more subunits, one of which had to be a cropper or tenant operation under the close supervision of the multiple-unit operator."

If a farm operator, who was a cropper or tenant and a part of a multiple-unit operation, also operated some land that he owned, he would have been considered as operating two farms, in 1945. On the farm of which he was the owner, he would have been classified as a full owner; and on the farm forming a part of the multiple-unit operation, he would have been classified as a tenant. For all censuses other than that of 1945, only one farm would have been included in the census for such an operator, and the farm would have been classified as operated by a part owner. Most of the increase in the number of part-owner operators, however, resulted from full-owner operators increasing the size

of their operations by the renting of additional land from others.

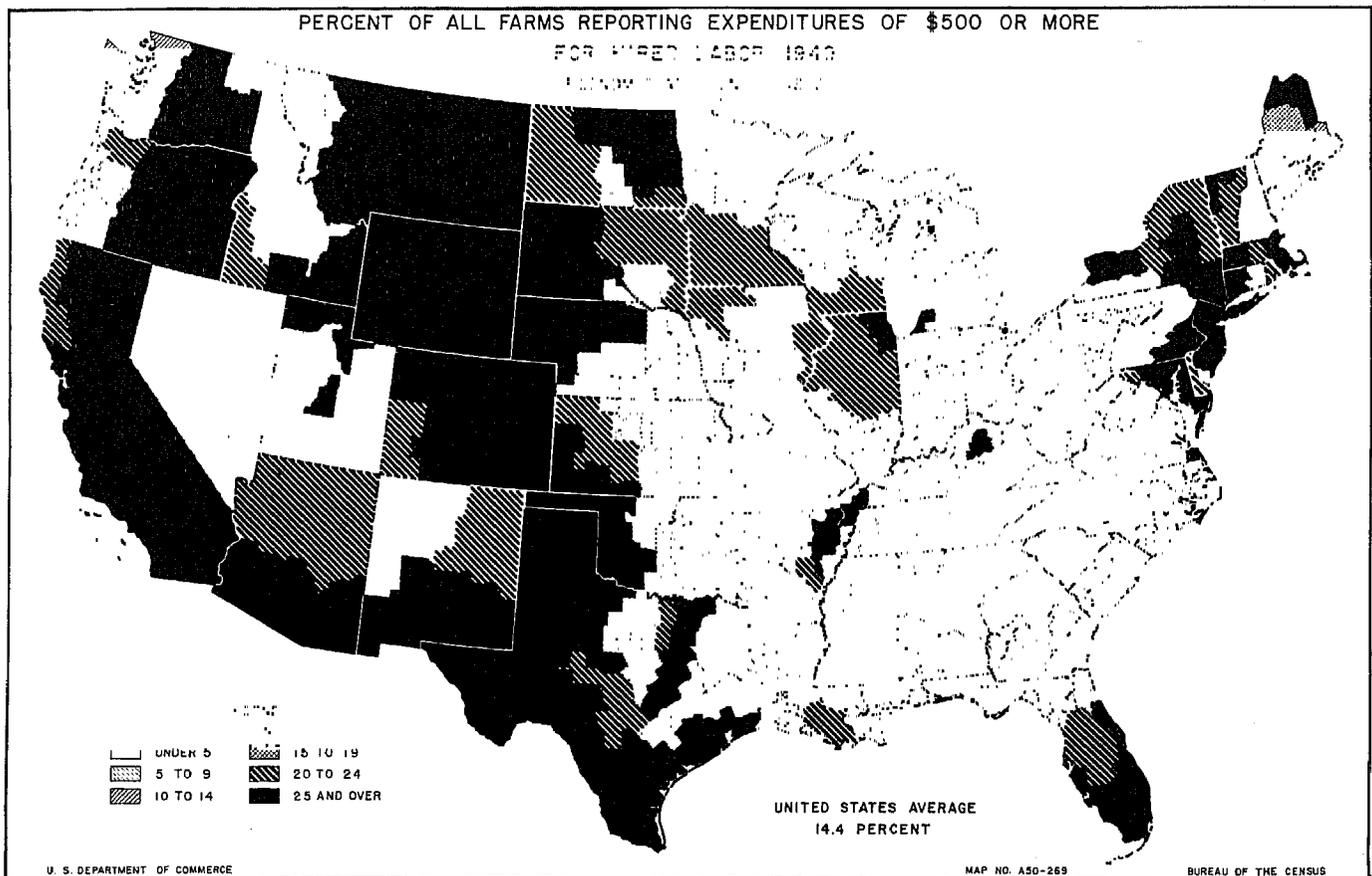

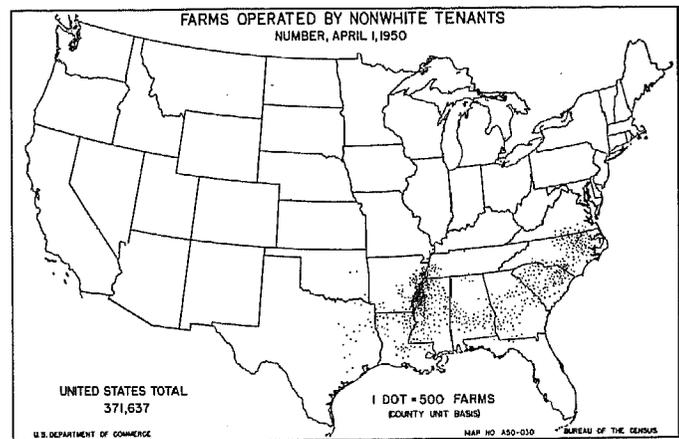

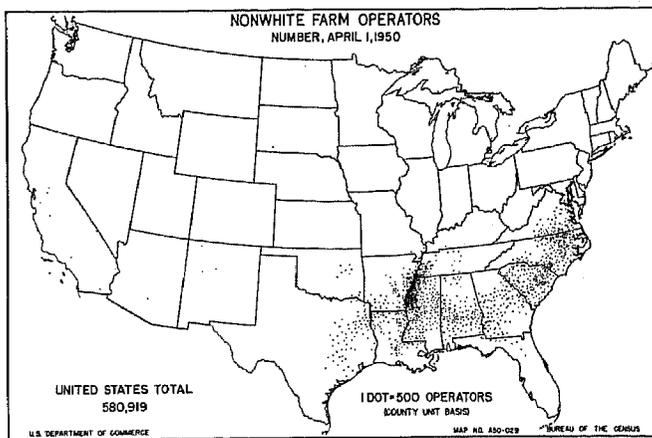

Farm tenancy was lower for 1950 than for any census since 1880. For 1880, the proportion of farms operated by tenants was 25.6 percent. The proportion of tenancy increased at each census from 1880 until 1930, when it was 42.4 percent. Since 1930, the proportion of farms operated by tenants has declined. For 1950, only 26.8 percent of the farms were operated by tenants.

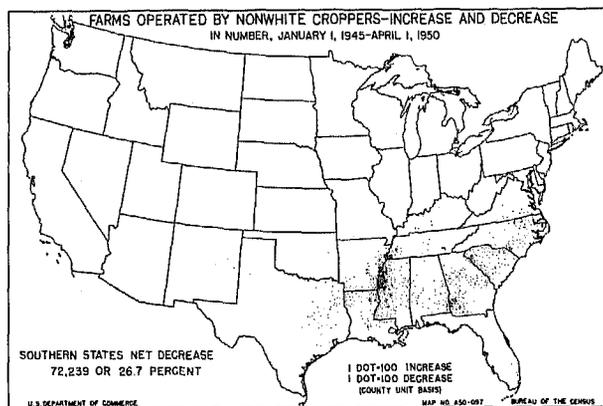

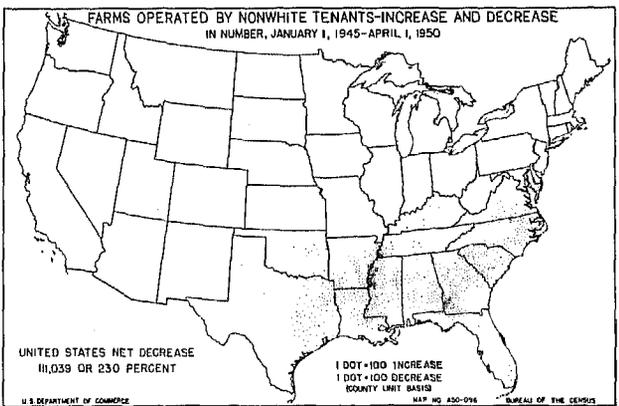

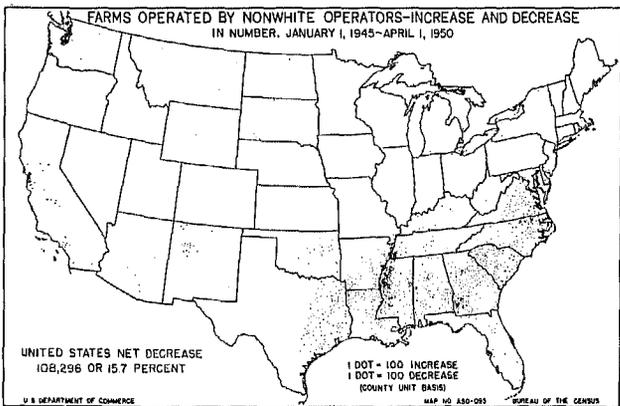

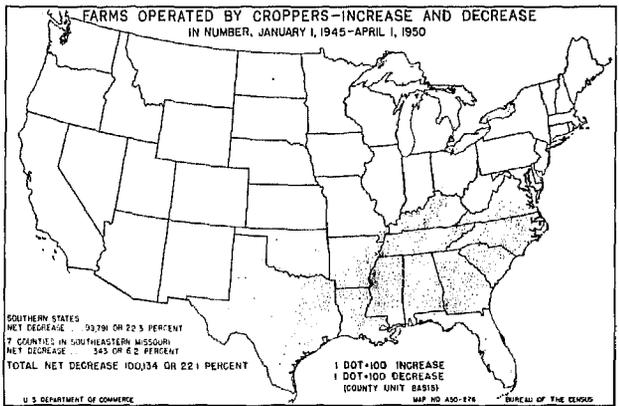

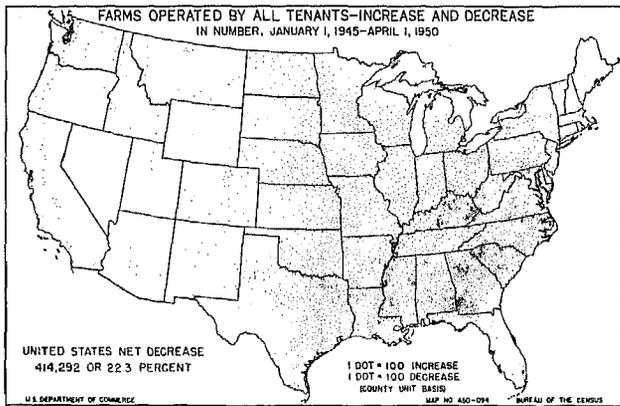

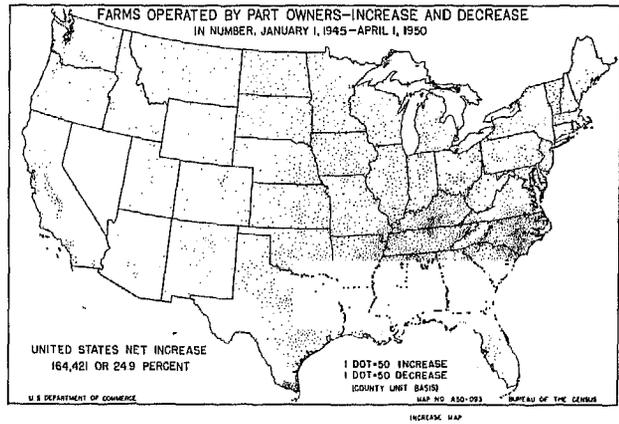

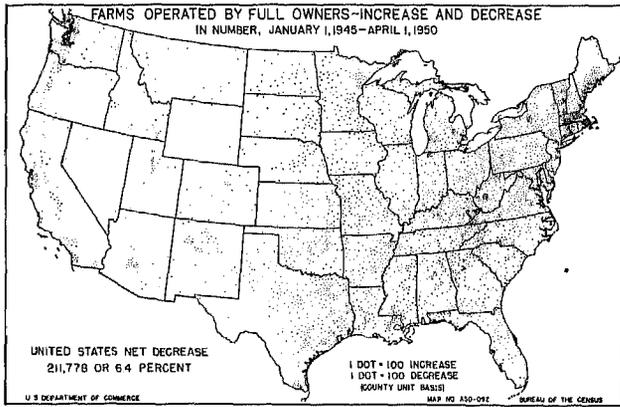

Decreases in the number of tenants between 1945 and 1950 occurred generally throughout the entire United States. However, there were increases in the number of tenants in some counties in the South, accompanied by increases in acreages of cotton and tobacco. Decreases in the number of tenants were largely the result of (a) reduction in the number of farms because of the elimination or curtailment of agricultural activities on places with limited farm production, (b) consolidation of farms into larger operating units, and (c) increases in farm ownership.

The reduction in the number of farms operated by tenants because of the elimination or curtailment of agricultural activi-

ties on some places was probably responsible for a small part of the decrease in the number of tenant-operated farms. This factor affected the number of farms operated by cash tenants more than the number of farms operated by any other subclass of tenants. The consolidation of farms into larger operating units that accompanied the mechanization of farms affected the number of tenant-operated farms, particularly in parts of the South. The increase in farm ownership was brought about in many cases by the purchase of farms by operators who had previously been tenants.

Change in rented land.—From 1945 to 1950, the rented land in farms decreased by approximately 6.0 percent while the number of tenants decreased by 22.3 percent. Land in tenant-operated farms decreased from 251,634,186 acres in 1945 to 211,960,028 acres in 1950, or a total decrease of 39,674,158 acres. An increase of approximately 14,000,000 acres in the rented land in part-owner farms offset part of the decrease in the total acreage of rented land.
