

WISCONSIN.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Wisconsin, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 1054) shows the population of Wisconsin, distributed according to counties and minor civil divisions, at the last three Federal censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties and of the primary divisions in each county is alphabetical. The figures for the two secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. In the majority of cases this is due to the territorial changes that have been made in the minor civil divisions within certain counties since 1890, although in the case of some counties it is explained by the formation of new counties from their territory or by the transfer of part of their territory to other counties since 1890. In some instances, moreover, divisions which were returned independently at one census were at another census returned as secondary divisions or in combination with other divisions. One county was not returned by towns in 1890.

Table 2 (p. 1069) shows the cities and incorporated villages in Wisconsin, alphabetically arranged, with their population in 1910, 1900, and 1890.

HISTORICAL NOTE.—Wisconsin was named from its principal river. The significance of the word, which is of Indian origin, is not positively known, but among the meanings given are "wild, rushing river," "gathering of the waters," and "great stone or rocks."

The first explorers of the region now constituting Wisconsin were the French. In 1634 Jean Nicolet, sent out by the governor of New France to promote trade with the Indians, landed where the city of Green Bay now stands, and ascended the Fox River to a point about 20 miles west of Lake Winnebago. Twenty years later two fur traders, Radisson and Grosseilliers, ascended the Fox and may have descended the Wisconsin to its junction with the Mississippi. In 1669 a mission was established on the Fox River a few miles above its mouth, and about this mission grew up the town of Deperre, the first permanent settlement within the present limits of Wisconsin.

In 1763, at the close of the French and Indian War, the French possessions east of the Mississippi were ceded to England. At the close of the Revolution the territory northwest of the Ohio and east of the Mississippi was ceded by Great Britain to the United States. The former country, however, did not at once relinquish its hold,

The population of Wisconsin, by counties, at each of the last five Federal censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two Federal censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the *proportion* urban or rural at the preceding census, it is necessary to classify the terri-

and, although its outposts in that region were evacuated in the summer of 1798, it was not until the close of the war of 1812 that it ceased to exercise some degree of control in the territory between Lake Michigan and the Mississippi.

In 1787 the region bounded by Pennsylvania, the Ohio River, the Mississippi River, and the Great Lakes was organized as the Northwest Territory, the claims of Massachusetts, Connecticut, and Virginia, based on their early charters, having been ceded to the United States between 1781 and 1788. In 1800 the present area of Wisconsin was included in the newly organized territory of Indiana; in 1809 it was made a part of Illinois territory; and in 1818, when Illinois became a state, it was added to Michigan territory.

Wisconsin was organized as a separate territory in 1836. At this time it included, in addition to the area of the present state, the region now constituting Minnesota, Iowa, and those portions of North and South Dakota lying east of the Missouri and White Earth Rivers. In 1838 that part of Wisconsin territory situated west of the Mississippi River and a line drawn north from its source to the Canadian boundary was organized as the territory of Iowa. In May, 1848, Wisconsin, with boundaries as at present, became a state of the Union.

tory according to the conditions as they existed at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their rate of growth, it is necessary to consider the changes in population for the same territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis,

and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two Federal censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Wisconsin is 2,333,860. Compared with a population of 2,069,042 in 1900, this represents an increase during the last decade of 264,818, or 12.8 per cent. During the same period the total population of the United States increased 21 per cent.

The following table shows the population of Wisconsin at each Federal census from 1840 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910.....	2,333,860	264,818	12.8	21.0
1900.....	2,069,042	375,712	22.2	20.7
1890.....	1,693,330	377,833	28.7	25.5
1880.....	1,315,497	260,827	24.7	30.1
1870.....	1,054,670	278,789	35.9	22.6
1860.....	775,881	470,490	154.1	35.6
1850.....	305,391	274,446	886.9	35.9
1840.....	30,945			

¹ Includes population (6,450) of Indian reservations specially enumerated.

Wisconsin was organized as a territory in 1836 and appears in the Federal census reports for the first time in 1840. During the 20 years from 1840 to 1860 the population increased very rapidly, multiplying almost ten times during the first 10 years of this period and more than doubling during the second 10 years. During the 50 years since 1860 the population of the state has shown a substantial increase at each census, though at a much slower rate than during the preceding 20-year period, and, with one exception, at a steadily decreasing rate. The percentage of increase fell below 20 only during the last decade.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that there have been only two decades in which the rate of increase for the state has been below that for the country as a whole, namely, 1900-1910 and 1870-1880. Since 1860, however, the differences between the two rates have not been exceptionally large, the greatest difference being that for the decade 1860-1870 and the smallest difference that for the decade 1890-1900. During this 50-year period the population of the United States increased a little less than three times, while that of the state increased a little more than three times. During the preceding 20 years, 1840-1860, the state increased in population far more rapidly than the United States,

the population of the state increasing more than twenty-five times, while that of the country as a whole nearly doubled.

Principal cities.—Wisconsin has 124 cities. Milwaukee, the largest, has a population of 373,857, and Superior, the second city, a population of 40,384. Besides Superior there are 6 cities having from 25,000 to 50,000 inhabitants. There are also 10 cities having from 10,000 to 25,000, 18 having from 5,000 to 10,000, 37 having from 2,500 to 5,000, and 51 having less than 2,500 inhabitants. The aggregate population of the 124 cities is 1,083,708, or 46.4 per cent of the total population of the state.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table on page 1049 shows the population of the 8 cities having in 1910 over 25,000 inhabitants, as reported at each Federal census since their incorporation either as cities or villages, so far as figures are available, together with the increase during each decade.

Of the cities included in this table, Green Bay shows the highest percentage of increase during the last decade, namely, 35.1 per cent, and La Crosse the lowest, 5.3 per cent. The rates of increase for all of the cities have been lower during the last decade than during the preceding decade.

1840.....	1,712						

The relative growth of the population of Milwaukee during the last decade, 31 per cent, has been slower than during any preceding decade. The absolute increase, however, was greater than during any previous decade, with one exception. The percentages of increase for the preceding decades ranged from 39.5 per cent for the decade 1890-1900 to 1,071.8 per cent for the decade 1840-1850.

Counties.—Wisconsin has 71 counties. The population of these counties ranges from 3,381 in Florence County to 433,187 in Milwaukee County.

The following territorial changes have been made in the counties of Wisconsin since 1900: The formation of Gates County in 1901 from Big Bend, Dewey, Flambeau, Lawrence, and Strickland towns in Chippewa County; the name of this new county being changed to Rusk in 1905; the addition of part of Vilas County to Oneida County in 1901; and the addition of part of Forest County to Vilas County in 1905.

Owing to the organization since 1900 of one new county from part of another county, as shown above, the comparison of increase or decrease in population is made for only 69 counties and one combination of counties, the counties combined being Chippewa and Rusk. In order to determine the actual rate of increase for these latter counties, it is necessary to add the population of the new county to that of the old county from which it was formed. Fifty counties and the one combination of counties increased in population during the last decade. The rates of increase for the 50 counties that show increases range from less than one-tenth of 1 per cent in Columbia County to 385.8 per cent in Forest County, and the absolute increases of the same group of counties range from 8 in

Columbia County to 103,170 in Milwaukee County. The population of the one combination of counties increased 10,226, or 31 per cent. Nineteen counties decreased in population during the last decade, the rates of decrease ranging from four-tenths of 1 per cent in Sauk County to 7.8 per cent in Pierce County, and the absolute decreases from 137 in Sauk County to 1,864 in Pierce County. The aggregate increase of population from 1900 to 1910 in the one combination of counties and in the 50 counties that show increases is 277,080; the aggregate decrease in the 19 counties that show decreases is 12,262. The difference, 264,818, is, of course, the total increase of population in the state.

The maps on page 1052 show the increase or decrease in the total and the rural population, respectively, of each county of Wisconsin during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 55,256 square miles. The average number of persons to the square mile in 1910 was 42.2; in 1900 and 1890 it was 37.4 and 30.6, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in the maps on page 1053, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 or more, but not excluding the land area of such places.

Marathon County, with 1,554 square miles, has the largest area, and Ozaukee County, with 233 square miles, has the smallest area. Milwaukee County,

containing Milwaukee city, has the highest density of any county, namely, 1,843.3 persons per square mile, while Sawyer County, with 4.7 persons per square mile, has the lowest density.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Wisconsin the counties are divided into 1,558 primary divisions, comprising 1,183 towns, 124 cities, and 251 villages. There are also two secondary divisions in the state, comprising that number of villages. Besides these minor civil divisions there are six Indian reservations in the state.

These reservations, though independent of any county organization, are returned under the counties in which they are wholly or partly located.

Urban and rural population compared.—The following table presents the population of Wisconsin at the Federal censuses of 1910, 1900, and 1890; respectively, distributed among cities and incorporated villages grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.		
	Number of places.	Population.	Number of places.	Population.	Number of places.	Population.	1910	1900	1890

Rural territory.....		1,329,540		1,278,829		1,131,044	57.0	61.8	66.8
Cities and villages of less than 2,500 inhabitants.....	304	238,251	200	179,339	161	146,395	10.2	8.7	8.6
Other rural territory.....		1,091,289		1,099,490		984,649	46.8	53.1	58.1

¹ Includes population (8,450) of Indian reservations specially enumerated.

As shown by the above table, the urban territory of the state in 1910—that is, the cities of 2,500 inhabitants or more—contained 1,004,320 inhabitants, or 43 per cent of the total population, while 1,329,540 inhabitants, or 57 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities then having 2,500 inhabitants or more—contained 790,213 inhabitants, or 38.2 per cent of the total population, while 1,278,829 inhabitants, or 61.8 per cent, lived in rural territory. There has thus been a considerable increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

The proportion of the total population of the state residing in Milwaukee, the one city in the state having over 100,000 inhabitants, increased from 12.1 per cent in 1890 to 13.8 per cent in 1900 and 16 per cent in 1910. In 1890 there was only one city in the state having from 25,000 to 50,000 inhabitants, this city comprising only 1.5 per cent of the population of the state, while in 1910 there were seven cities within these population limits, these cities together comprising 9.4 per cent of the total population of the state. The proportion of the total population in the group made up of the cities having from 2,500 to 25,000 inhabitants decreased from 19.6 per cent in 1890 to 18.7 per cent in 1900, and 17.6 per cent in 1910.

The urban population of the state is contained in 73 cities, having a combined population of 1,004,320. The rural population is in 304 cities and villages of less than 2,500 inhabitants each and in the unincorporated territory. The 304 cities and villages of less than 2,500 inhabitants each have an aggregate population of 238,251, or 10.2 per cent of the total population of the state. These places comprise 69 having from 1,000 to 2,500 inhabitants each, with a combined population of 107,699; 133 having from 500 to 1,000 inhabitants each, with a combined population of 94,016; and 102 having less than 500 inhabitants each, with a combined population of 36,536. The population living in unincorporated territory represents 46.8 per cent of the total population of the state.

The above table further shows that in all incorporated places, including those of less than 2,500 inhabitants, there was in 1910 a population of 1,242,571, or 53.2 per cent of the population of the state. The population of all incorporated places, as they existed in 1900, was 969,552, or 46.9 per cent of the population of the state.

Table I of Chapter 2 shows that 33 counties and the one combination of counties had a larger proportion and 8 counties a smaller proportion of urban population in 1910 than in 1900, while for 1 county the proportion was the same. Four counties wholly rural in 1900 were partly urban in 1910 and 23 counties were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the table in the next column, the total population in 1910 of those cities which at that time had 2,500 inhabitants or more was 1,004,320; in 1900 the total population of these same places (so far as separately reported) was 811,096. It may be noted that the latter figure exceeds the total population in 1900 of those cities which at that time had over 2,500 inhabitants each, 790,213 (see table on page 1050), by 20,883. The difference is the result of the passage, since 1900, of certain communities from the rural to the urban class.

A comparison of the total population in 1910 of the cities having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table in the next column, shows an increase of 23.8 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased 5.7 per cent. Urban population thus increased nearly twice as rapidly as that of the state as a whole and a little more than four times as rapidly as that of rural territory. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent.

As shown by Table I of Chapter 2, there are 29 counties in which the population living in rural territory decreased and 8 counties in which there was a decrease in the urban population, St. Croix and Iowa

being the only counties that decreased in population in both urban and rural districts.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the population of the city of Milwaukee, the combined population of the other cities having, in 1910, 25,000 inhabitants or more, the combined population of cities having from 2,500 to 25,000 inhabitants, and the population of the remainder of the state.

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state.....	2,333,860	2,069,042	264,818	12.8
Urban territory in 1910.....	1,004,320	811,096	193,224	23.8
City of Milwaukee.....	373,867	285,315	88,552	31.0
Other cities of 25,000 inhabitants or more in 1910.....	219,030	173,182	45,848	26.5
Cities of 2,500 to 25,000 inhabitants in 1910.....	411,433	347,599	63,834	18.4
Remainder of the state.....	1,329,540	1,257,946	71,594	5.7

From this table it appears that the population of the city of Milwaukee increased during the last decade nearly two and one-half times as rapidly as the population of the state as a whole. The population of the group of other cities having 25,000 inhabitants or more increased a little more than one and three-fourths times as rapidly, and the population of the group of cities having from 2,500 to 25,000 inhabitants increased a little less than one and one-half times as rapidly as the population of the state, while the rate of increase for rural territory was less than one-half the rate for the state as a whole.

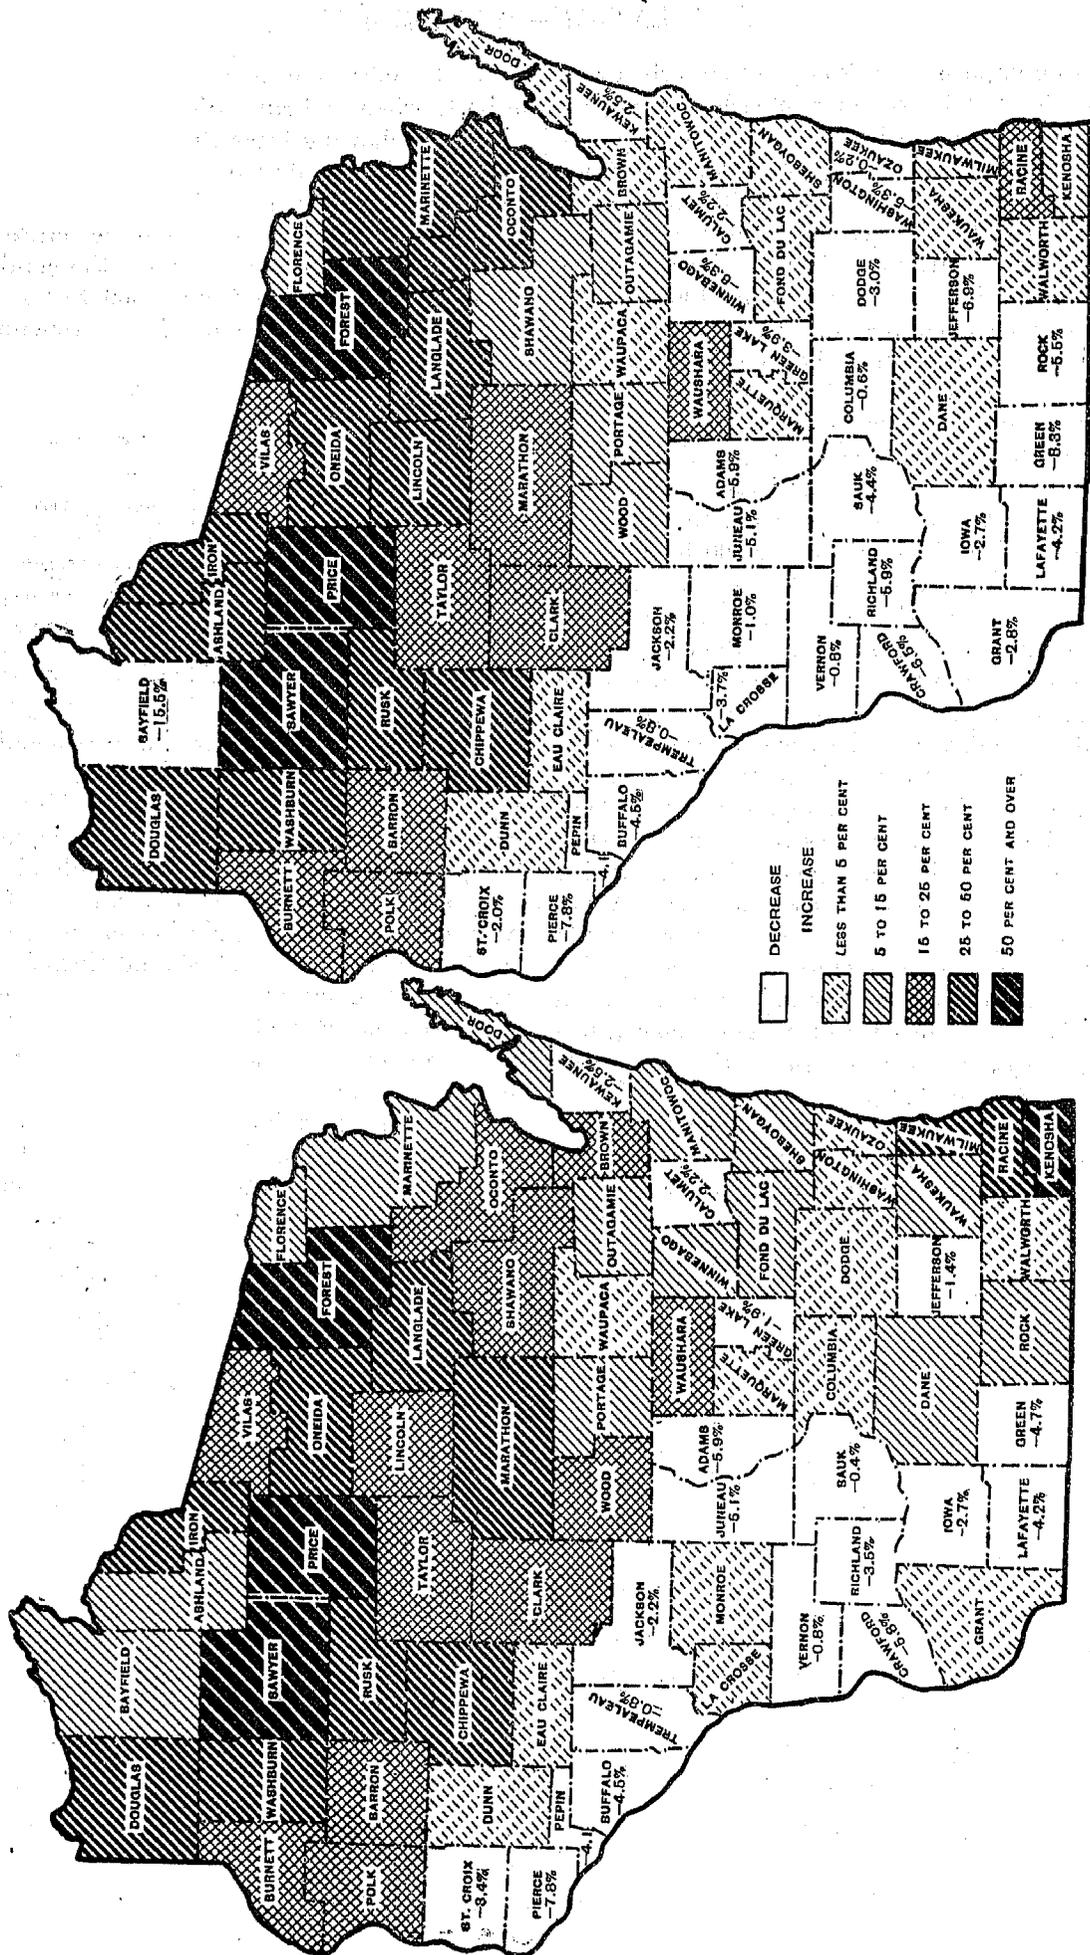

It also appears from this table that of the total increase in the population of the state during the decade, namely, 264,818, more than one-third was contributed by the city of Milwaukee.

PER CENT OF INCREASE OR DECREASE OF POPULATION OF WISCONSIN, BY COUNTIES: 1900-1910.

In case of decrease the per cent is inserted under the county name.

TOTAL POPULATION.

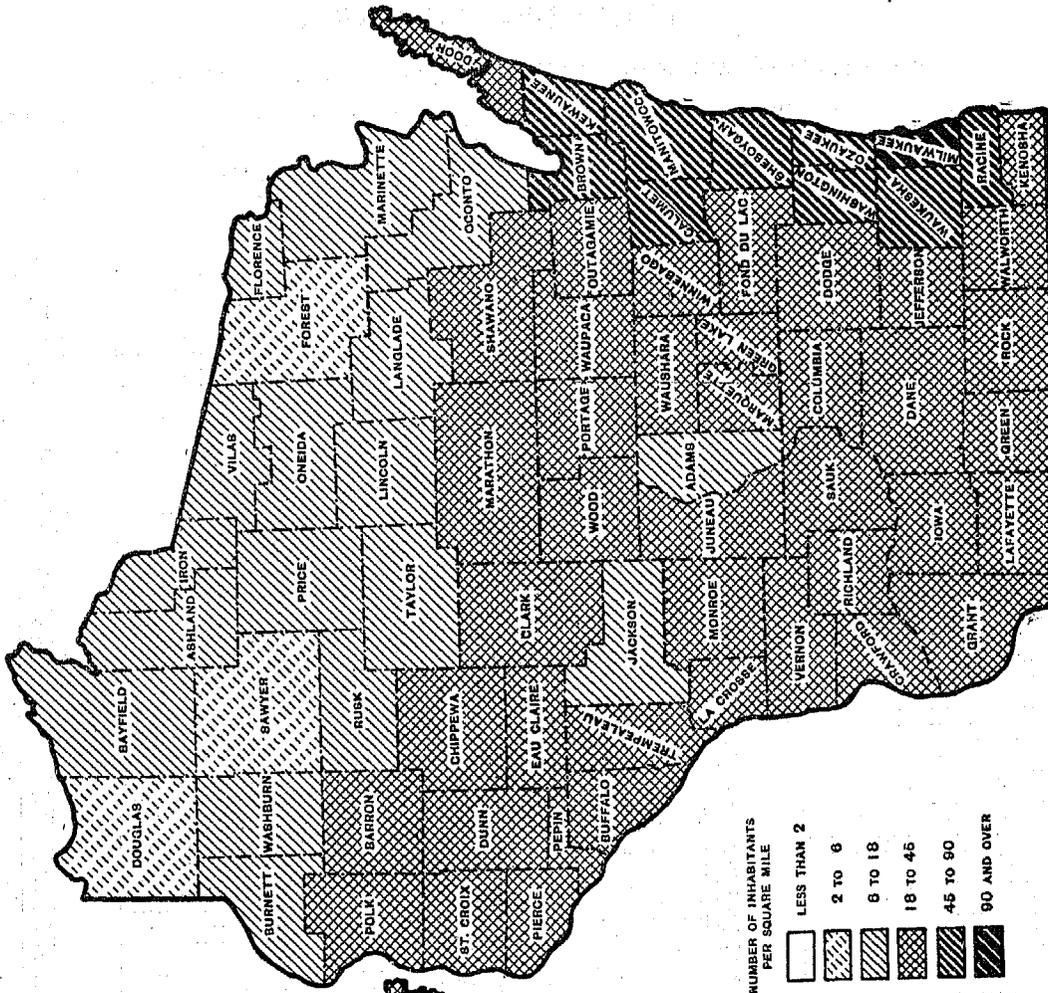

RURAL POPULATION.

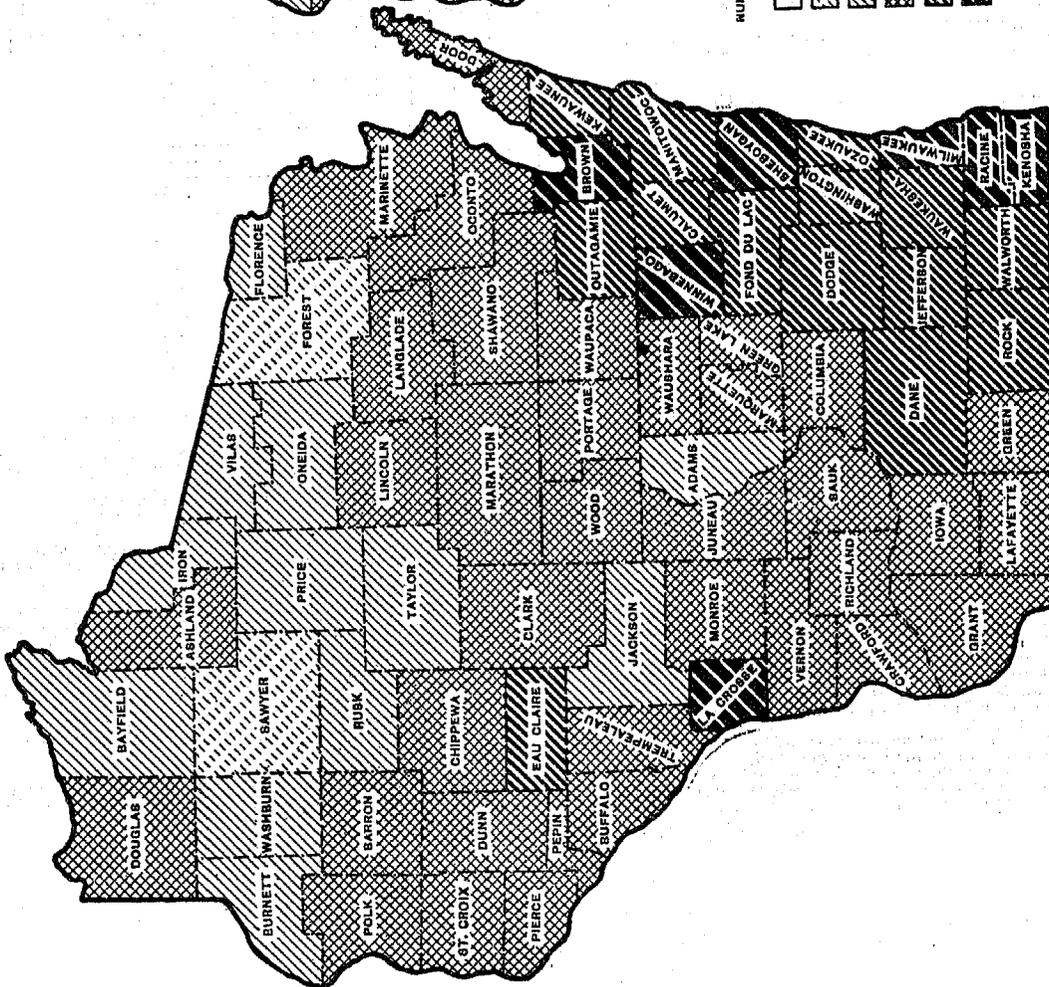

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

DENSITY OF POPULATION OF WISCONSIN, BY COUNTIES: 1910.

RURAL POPULATION.

TOTAL POPULATION.

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890.

[For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

¹ Part taken to form Knapp village in 1905.
² Part taken to form Downing village in 1900.
³ Weston village incorporated from part of Weston town in 1909.
⁴ Fall Creek village incorporated from part of Lincoln town in 1906.
⁵ Campbellsport village incorporated from parts of Ashford and Auburn towns in 1902.
⁶ North Fond du Lac village incorporated from parts of Fond du Lac and Friendship towns in 1902.
⁷ St. Cloud village incorporated from part of Marshfield town in 1909.
⁸ Oakfield village incorporated from part of Oakfield town in 1903.
⁹ Part annexed to Vilas County in 1905.
¹⁰ County total includes population (690) of Cavour town, taken to form Caswell and Wabeno towns since 1900.
¹¹ County total includes population (462) of Gagen town, annexed to Oneida County, and population (180) of Pelican town, part annexed to Oneida County and part taken to form part of Cavour town, between 1890 and 1900.

¹² Organized from part of Cavour town in 1901; part taken to form part of Laona town in 1903.
¹³ Incorporated from part of Crandon town in 1909.
¹⁴ Parts taken to form North Crandon, Hiles, and Nashville towns in 1901, 1903, and 1909, respectively, and Crandon city in 1909.
¹⁵ Organized from part of Crandon town in 1903.
¹⁶ Organized from parts of Caswell and Wabeno towns in 1903.
¹⁷ Organized from part of Crandon town in 1909.
¹⁸ Organized from part of Crandon town in 1901.
¹⁹ County totals include population (1,659 in 1900; 1,746 in 1890) of that part of Lancaster town outside of Lancaster city, taken to form North Lancaster and South Lancaster towns since 1900.
²⁰ Boscobel city made independent of Boscobel town in 1906.
²¹ Exclusive of population of Boscobel city.
²² Made independent of Lancaster town in 1901.

POPULATION—WISCONSIN.

1061

1 Part annexed to Oneida County in 1901; part of Forest County annexed in 1905.
 2 County total includes population (1,955) of Minocqua town, part annexed to Oneida County and part taken to form Flambeau town since 1900.
 3 Part taken to form part of Presque Isle town in 1907.
 4 Organized from part of Eagle River town in 1907.
 5 Parts taken to form Conover, Farmington, and State Line towns in 1907 and part of Hackley town in 1905 and part annexed to Presque Isle town in 1909.
 6 Organized from part of Minocqua town in 1900; part taken to form part of Presque Isle town in 1907.
 7 Organized from part of Eagle River town and territory taken from Forest County in 1905.
 8 Organized from parts of Arbor Vitae and Flambeau towns in 1907 and part of Eagle River town annexed in 1909.
 9 Genoa Junction village incorporated from part of Bloomfield town in 1902.
 10 East Troy village incorporated from part of East Troy town in 1900.
 11 Walworth village incorporated from part of Walworth town in 1901.
 12 County totals include population (1,823 in 1900; 1,535 in 1890) of Shell Lake town, parts taken to form Sarona town and part of Loomis town and the remainder incorporated as Shell Lake village since 1900.
 13 Organized from part of Bashaw town in 1905.
 14 Parts taken to form Barronett and Evergreen towns in 1905 and 1910, respectively, and part of Chicoe town in 1902.
 15 Organized from part of Chicoe town in 1904.

16 Organized from parts of Bashaw and Spooner towns in 1902; parts taken to form Brooklyn and Casey towns and part of Trego town in 1904.
 17 Organized from part of Bashaw town in 1910.
 18 Frog Creek town organized from part of Minong town in 1907.
 19 Organized from part of Spring Brook town in 1904.
 20 Part taken to form part of Loomis town in 1903.
 21 Organized from parts of Long Lake and Shell Lake towns in 1903.
 22 Organized from part of Shell Lake town in 1904.
 23 Incorporated from part of Shell Lake town in 1909.
 24 Parts taken to form Spooner village in 1903 and parts of Chicoe and Trego towns in 1902 and 1904, respectively.
 25 Incorporated as a village from part of Spooner town in 1903; incorporated as a city in 1909.
 26 Name changed from Veazie in 1904. Parts taken to form Gull Lake and Stinnett towns in 1904.
 27 Organized from part of Spring Brook town in 1904; part taken to form Stone Lake town in 1905.
 28 Organized from part of Stinnett town in 1905.
 29 Name changed from Mills in 1906. Organized from parts of Chicoe and Spooner towns in 1904.
 30 Mukwonago village incorporated from part of Mukwonago town in 1904 and made independent in 1905.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890—Continued.

[For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Wisconsin by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of more than 25,000 inhabitants; Table III for cities of 10,000 to 25,000; Table IV for cities of 2,500 to 10,000; and Table V for wards of Milwaukee.

A series of summary tables (numbered 1 to 16) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had

attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Wisconsin, 763,225, or 32.7 per cent, are native whites of native parentage; 1,044,761, or 44.7 per cent, are native whites of foreign or mixed parentage; and 512,569, or 22 per cent, are foreign-born whites. The corresponding percentages in 1900 were 28.3, 46.2, and 24.9, respectively, the proportion of native whites of native parentage having increased somewhat during the decade. In only 2 of the 71 counties is the percentage of foreign-born whites less than 10, in 7 it is between 10 and 15, in 48 between 15 and 25, in 12 between 25 and 35, and in 2 it exceeds 35. The percentage of native whites of foreign or mixed parentage ranges generally higher, exceeding 35 in 63 counties. (See maps on page 1081).

Of the urban population, 28.5 per cent are native whites of native parentage; of the rural, 35.9 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 45.7 and 44.1 per cent, respectively. The percentage of foreign-born whites is 25.5 in the urban population and 19.3 in the rural. The Indians appear almost exclusively in the rural population, of which they constitute 0.7 per cent.

Sex (Tables 2 and 14).—In the total population of the state there are 1,208,578 males and 1,125,282 females, or 107.4 males to 100 females. In 1900 the ratio was 106.6 to 100. Among the native whites the ratio is 101.6; among the foreign-born whites, 130.8. In the urban population there are 101.7 males to 100 females, and in the rural, 111.9.

State of birth (Tables 3 and 4).—Of the total native population—that is, population born in the United States—85.6 per cent were born in Wisconsin and 14.4 per cent outside the state, the proportions being the same for the native white population. Of the native negroes, 58.7 per cent were born outside the state; of the native Indians, 6.1 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Tables 5 and 12).—Of the foreign-born white population of Wisconsin, persons born in Germany represent 45.5 per cent; Norway, 11.1; Austria, 7.5; Russia, 5.8; Sweden, 5; Canada, 4.9; Denmark, 3.2; Ireland, 2.7; England, 2.7; all

other countries, 11.6. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Germany contributed 51 per cent; Norway, 10.1; Austria, 5.2; Canada, 5; Ireland, 4.8; Sweden, 3.6; England, 3.4; Russia, 2.9; Denmark, 2.5.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 683,743, representing 29.3 per cent of the population. Of such males, 21.7 per cent are native whites of native parentage, 38.3 per cent native whites of foreign or mixed parentage, 39.4 per cent foreign-born whites, and 0.6 per cent are in other classes. Of the 269,237 foreign-born white males of voting age, 142,848, or 53.1 per cent, are naturalized. Males of militia age—18 to 44—number 497,922.

Age (Tables 7, 8, and 13).—Of the total population, 11 per cent are under 5 years of age, 21.1 per cent from 5 to 14 years, inclusive, 19.9 per cent from 15 to 24, 27.3 per cent from 25 to 44, and 20.5 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 3.6 per cent of this class being under 15 years of age, while 87.1 per cent are 25 years of age and over. Of the native whites of native parentage, 30.4 per cent are 25 years of age and over; of native whites of foreign or mixed parentage, 41.3 per cent; of Indians, 42 per cent; and of negroes, 61.3 per cent.

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 30.3 per cent are from 25 to 44 years of age, inclusive, and of the rural, 25 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 732,544, of whom 484,629, or 66.2 per cent, attended school. In addition to these, 22,287 children under 6 and 7,985 persons 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 66; for girls, 66.3. For children from 6 to 14 years, inclusive, the percentage attending school was 89.9. The percentage for children of this age among native whites of native parentage was 90.8; among native whites of foreign or mixed parentage, 89.7; among foreign-born whites, 84.1; and among negroes, 88.9. (See Table I.) There is little difference between urban and rural communities as regards the percentage of school attendance for the ages from 6 to 14, but for persons from 15 to 20, the percentages were 27.3 in the urban population and 31.3 in the rural.

Illiteracy (Table 10).—There are 57,769 illiterates in the state, representing 3.2 per cent of the total population 10 years of age and over, as compared with 4.7 per cent in 1900. The percentage of illiteracy is 33.7 among Indians, 8.7 among foreign-born whites, 4.5 among negroes, and 0.9 among native whites.

For all classes combined, the percentage of illiteracy is slightly higher in rural than in urban communities, 3.3 as compared with 3. The rural percentage exceeds the urban for each class separately, except the foreign-born whites, most of whom arrive in this country when past the school age. Among them the percentage is the same in the urban as in the rural population.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is only 0.7. (See Table I.)

Marital condition (Tables 11 and 15).—In the population 15 years of age and over, 41.4 per cent of the males are single and 32.6 per cent of the females. The percentage married is 53.6 for males and 57.7 for females, and the percentage widowed 4.2 and 9, respectively. The percentages of those reported as divorced, 0.5 and 0.6, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is smaller for women than for men is due largely to the fact that women marry younger. Thus 4.6 per cent of the females from 15 to 19 years of age are married, as compared with 0.3 per cent of the males, and 39.1 per cent of the females from 20 to 24 years are married, as compared with 14.4 per cent of the males. In the next two age groups, 25 to 34 and 35 to 44 years, the difference is less marked, while among those 45 and over, the percentage married is higher among the males. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 68.2 for males and 71.8 for females; native whites of foreign or mixed parentage, 46.8 and 54, respectively; native whites of native parentage, 45.1 and 48.8; Indians, 55.2 and 63.1; negroes, 45.6 and 50.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married for males is higher in the urban population; for females, it is higher in the rural.

Dwellings and families.—The total number of dwellings in Wisconsin is 462,355, and the total number of families 499,629, there being 108.1 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling is 5, and the average number per family, 4.7.

NOTES REGARDING CHANGES IN BOUNDARIES, ETC.

COUNTIES.

ASHLAND.—Parts taken to form part of Sawyer in 1883 and part of Iron in 1893.
 BURNETT.—Part taken to form Washburn in 1883.
 CHIPPEWA.—Parts taken to form part of Taylor in 1875, part of Price in 1879, and part of Sawyer in 1883; part taken to form Gates County (now Rusk) in 1901.
 CLARK.—Part taken to form part of Taylor in 1875.
 FLORENCE.—Organized from parts of Marinette and Oconto in 1882.
 FOREST.—Organized from parts of Langlade and Oconto in 1885; part annexed to Oneida between 1890 and 1900 and part annexed to Vilas in 1905.
 IRON.—Organized from parts of Ashland and Oneida in 1893.
 LANGLADE.—Organized as New from part of Oconto in 1879; name changed in 1880; part taken to form part of Forest in 1885; part of Lincoln annexed between 1880 and 1890.
 LINCOLN.—Organized from part of Marathon in 1874; parts taken to form part of Taylor in 1875 and part of Price in 1879; part taken to form Oneida in 1885; part annexed to Langlade between 1880 and 1890.
 MARATHON.—Parts taken to form Lincoln in 1874 and part of Taylor in 1875.
 MARINETTE.—Organized from part of Oconto in 1879; part taken to form part of Florence in 1882.
 OCONTO.—Part of Shawano annexed in 1879; parts taken to form Marinette and New (now Langlade) in 1879, part of Florence in 1882, and part of Forest in 1885.
 ONEIDA.—Organized from part of Lincoln in 1885; parts taken to form Vilas and part of Iron in 1893; part of Forest annexed between 1890 and 1900 and part of Vilas annexed in 1901.
 PRICE.—Organized from parts of Chippewa and Lincoln in 1879.
 RUSK.—Organized as Gates from part of Chippewa in 1901; name changed in 1905.
 SAWYER.—Organized from parts of Ashland and Chippewa in 1883.
 SHAWANO.—Part annexed to Oconto in 1879.

TAYLOR.—Organized from parts of Chippewa, Clark, Lincoln, and Marathon in 1875.

VILAS.—Organized from part of Oneida in 1893; part annexed to Oneida in 1901; part of Forest annexed in 1905.

WASHBURN.—Organized from part of Burnett in 1883.

NOTE 1.—*Chippewa and Rusk Counties combined.*—Total population: 1910, 43,263; 1900, 33,037; increase, 1900-1910, 10,226; per cent of increase, 31. Urban population—1910, 11,563; same places in 1900, 10,481; per cent of increase, 10.4. Rural population—1910, 31,695; same territory in 1900, 22,556; per cent of increase, 40.5. Urban population—1900, 8,094; rural population—1900, 24,943. Per cent in places of 2,500 or more in 1910, 26.7. Per cent in places of 2,500 or more in 1900, 24.5.

NOTE 2.—In computing this increase the population of Indian reservations in 1900 has been deducted from the total population of the county in order to make that total comparable with the total for 1890, which does not include the population of Indian reservations. The population thus deducted in the several counties was as follows: Ashland, 627; Bayfield, 398; Brown, 695; Oconto, 232; Outagamie, 1,009; Sawyer, 873; Shawano, 1,631; and Vilas, 661.

CITIES.

KENOSHA.—Parts of Pleasant Prairie town annexed in 1902, 1906, and 1908, and parts of Somers town annexed in 1901, 1902, 1906, and 1908.

MADISON.—Part of Madison town annexed in 1903.

MARSHFIELD.—Part taken to form Cameron town in 1903.

MILWAUKEE.—Part of Milwaukee town annexed between 1890 and 1900. Parts of Greenfield town annexed in 1903 and 1910, part of Lake town annexed in 1908, part of Milwaukee town annexed in 1910, and parts of Wauwatosa town annexed in 1900, 1902, 1906, 1909, and 1910.

OSHKOSH.—Part of Oshkosh town annexed in 1906.

WASHBURN.—Incorporated from part of Washburn town in 1904.

WEST ALLIS.—Incorporated from parts of Greenfield and Wauwatosa towns in 1906.

WYOMING.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Wyoming, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 1109) shows the population of Wyoming in 1910, distributed according to counties and minor civil divisions, and, so far as possible, in comparison with similar figures for 1900 and 1890. The arrangement of counties is alphabetical, while the primary divisions in each county are given in numerical order, with the exception of the primary divisions of Converse County which are alphabetically arranged. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

The boundaries of minor civil divisions have been changed so extensively throughout the state during the last two decades that comparisons of population in 1910 by minor civil divisions with 1900 and 1890 are possible in comparatively few cases. It may be noticed that the county totals as given in Table 1 for 1900 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. This is for the most part due to territorial changes that have been made in the minor civil divisions as previously mentioned. In the case of one county it is because the population was returned by districts in 1910 but was not so returned in 1900 and 1890.

HISTORICAL NOTE.—The name of this state is derived from an Indian word signifying "great plains."

The first white men to visit the region now constituting Wyoming were two Frenchmen, sons of Sieur de la Verendrye, a Canadian, who made explorations in 1743. The first permanent settlement was made in 1834, when Fort Williams, later called Fort Laramie, was established as a trading post.

That part of the present state lying east of the Rocky Mountains was originally included in the vast area known as Louisiana, which was ceded by France to Spain in 1762, retroceded to France in 1800, and purchased by the United States in 1803. That part lying south of the forty-second parallel and west of a line drawn due north from the source of the Arkansas River originally belonged to Spain but became a part of Mexico in 1821, when that country achieved its independence. The eastern part of this area, about a degree of longitude in width, formed a part of Texas from 1836, when that state became independent of Mexico, to 1850, five years after it was annexed to the United States; the western part of the area was ceded to the United States by Mexico in 1848, at the close of the Mexican War. The rest of the area of the present state, comprising the tract north of the forty-second parallel and west of the Rocky Mountains, was originally included in the Oregon country, which was occupied jointly by the United States and Great Britain until 1846, when the latter nation relinquished its claim.

That part of Wyoming which was included in the Louisiana Purchase belonged

Table 2 (p. 1111) shows the cities and incorporated towns in Wyoming, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of Wyoming, by counties, at each of the last five Federal censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two Federal censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, election districts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or

successively to the district of Louisiana (1804-5), the territory of Louisiana (1805-1812), the territory of Missouri (1812-1834), and the "Indian country" (1834-1854). The area west of the Rocky Mountains and south of the forty-second parallel was made a part of the territory of Utah at its organization in 1850, and in the same year the small amount of former Mexico and Texas territory which lay east of the Rocky Mountains was added to the Indian country. In 1854 the area east of the Rocky Mountains was taken with other land to form the territory of Nebraska, and in 1861 the region east of the Rocky Mountains and north of the forty-third parallel was made a part of the territory of Dakota, while the region south of this parallel, extending west from the mountains to the one hundred and tenth meridian, was added to Nebraska. The region north of the forty-second parallel and west of the Rocky Mountains belonged to Oregon territory from 1848 to 1859 and to Washington territory from 1859 to 1863, with the exception of a small area which was transferred from Washington to Nebraska territory in 1861.

In 1863 all the present area of Wyoming except a section in the southwest corner, 1° of latitude in length and 1° of longitude in width, was included with the territory then organized as Idaho, and in 1864 all the present area except a strip 1° of longitude in width, extending from the forty-second parallel northward to the Rocky Mountains, was transferred from Idaho to Dakota.

In 1868 Wyoming, with boundaries as at present, was organized as a territory, and in 1890 became a state of the Union.

POPULATION—WYOMING.

with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions *as they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities as regards their *rate of growth*, it is necessary to consider the changes in population for the *same* territory which have occurred from one decennial

census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two Federal censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of the state of Wyoming is 145,965. Compared with a population of 92,531 in 1900, this represents an increase during the last decade of 53,434, or 57.7 per cent. During the same period the total population of the United States increased 21 per cent. The percentage of increase for the population of the state during the preceding

decade, 1890–1900, was 47.9. The following table shows the population of Wyoming as enumerated at each Federal census from 1870 to 1910, inclusive, together with the increase and the per cent of increase during each decade, in comparison with the per cent of increase of the population of the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent. of increase for the United States.
		Number.	Per cent.	
1910.....	145,965	53,434	57.7	21.0
1900.....	92,531	29,976	47.9	20.7
1890.....	¹ 62,555	41,766	200.9	25.5
1880.....	20,789	11,671	128.0	30.1
1870.....	9,118			

¹ Includes population (1,850) of Indian reservations specially enumerated.

Wyoming was organized as a territory in 1868 and appears in the Federal census reports for the first time in 1870. During the 20 years from 1870 to 1890 the growth of Wyoming was very rapid, the population in 1890 being nearly seven times as great as in 1870. Since 1890 the growth of the state has been slower, the population in 1910 being a little less than two and one-half times as great as in 1890. The absolute increase during the last decade was nearly six times the total population of the territory in 1870.

It may also be noted from this table that the population of Wyoming has increased more rapidly than that of the United States during every decade since 1870, when the population of the territory was first returned. The population of the state in 1910 was a little more than sixteen times as large as in 1870, while the population of the United States in 1910 was less than three times that in 1870.

Cities.—Wyoming has five cities, of which the largest, Cheyenne, has a population of 11,320, and Rawlins, the smallest city, a population of 4,256. The aggregate population of the five cities is 37,999, or 26 per cent of the total population of the state.

The following table shows the population of the five cities in the state, as reported at each Federal census since their incorporation either as cities or towns, so far as figures are available, together with the increase during each decade.

CITY AND CENSUS YEAR.	Population.	INCREASE ¹ OVER PRECEDING CENSUS.	
		Number.	Per cent.
Cheyenne:			
1910.....	11,320	-2,767	-19.6
1900.....	14,087	2,397	20.5
1890.....	11,690	8,234	238.3
1880.....	3,456	2,006	138.3
1870.....	1,450		
Laramie:			
1910.....	8,237	30	0.4
1900.....	8,207	1,819	28.6
1890.....	6,388	3,692	136.9
1880.....	2,696		
Rawlins:			
1910.....	4,256	1,939	83.7
1900.....	2,317	82	3.7
1890.....	2,235		
Rock Springs:			
1910.....	5,778	1,415	32.4
1900.....	4,363	957	28.1
1890.....	3,406		
Sheridan:			
1910.....	8,408	6,849	439.3
1900.....	1,559	1,278	454.8
1890.....	281		

¹ A minus sign (—) denotes decrease.

Of the cities included in the foregoing table, Sheridan shows the highest percentage of increase during the last decade, namely, 439.3 per cent, and Laramie the lowest, four-tenths of 1 per cent, while Cheyenne shows a decrease of 19.6 per cent. Two cities show a higher rate of increase during the last decade, 1900–1910, than during the preceding decade, 1890–1900, and in the case of one of these, namely, Rawlins, the difference was considerable.

Counties.—Wyoming has 14 counties. The population of these counties ranges from 3,453 in Johnson County to 26,127 in Laramie County. Yellowstone National Park, which is shown separately in Table 1, is independent of any county and has a population of 519.

The following territorial change has been made since 1900: Part of Bighorn County was taken in 1909 to form Park County.

Owing to the organization since 1900 of one new county from part of another county as shown above, the comparison of increase or decrease in population is made for only 12 counties and one combination of counties and for Yellowstone National Park. The combined counties are Park and Bighorn. In order to determine the actual rate of increase for these counties, it is necessary to add the population of the new county to that of the old county from which it was formed. Eleven counties, the one combination of counties, and Yellowstone National Park have increased in population during the last decade. The rates of increase for the 11 counties range from 17.7 per cent in Carbon County to 218.7 per cent in Sheridan County, and the absolute increases from 1,092 in Johnson County to 11,202 in Sheridan County. The combined counties of Bighorn and Park increased 9,467, or 218.7 per cent. The increase in Yellowstone National Park was 150, or 40.7 per cent. One county, Albany, decreased 1,510, or 11.5 per cent, during the last decade.

The maps on page 1107 show the increase or decrease in the total and the rural population, respectively, of each county of Wyoming and of Yellowstone National Park during the last decade. In the counties shown in white the population decreased; for the other counties and Yellowstone National Park the different rates of increase are indicated by differences in the shading.

Density of population.—The total land area of the state is 97,594 square miles. The average number of persons to the square mile in 1910 was 1.5; in 1900, 0.9, and in 1890, 0.6. The average number per square

mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in the maps on page 1108, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 or more, but not excluding the land area of such places.

Fremont County, with 12,659 square miles, has the largest area, and Sheridan County, with 2,575 square miles, has the smallest area. Sheridan County, containing Sheridan city, has the highest density of any county, namely, 6.3 persons per square mile. Converse, Fremont, Johnson, Natrona, and Park Counties have each an average of less than 1 person per square mile. The remaining counties, with two exceptions, have an average of less than 2 persons per square mile.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Wyoming the counties are divided into 215 primary divisions, comprising 167 election districts and 48 election precincts. There are also 48 secondary divisions, comprising 5 cities and 43 towns. These secondary divisions usually form parts of their respective precincts or districts, but 2 cities and 11 towns are coextensive with the election precincts or districts in which they are located. Besides these minor civil divisions there is one Indian reservation, which, though independent of any county organization, is returned under the county in which it is located.

Urban and rural population compared.—The following table presents the population of Wyoming at the Federal censuses of 1910, 1900, and 1890, respectively, distributed among cities and towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.		
	Number of places.	Population.	Number of places.	Population.	Number of places.	Population.	1910	1900	1890

Other rural territory.....		79,878		53,149		1 29,567	54.7	57.4	47.3

¹ Includes population (1,850) of Indian reservations specially enumerated.

As shown by the preceding table, the urban territory of the state in 1910—that is, the cities and incorporated towns of 2,500 inhabitants or more—contained 43,221 inhabitants, or 29.6 per cent of the total population, while 102,744 inhabitants, or 70.4 per cent, lived in rural

territory. The urban territory as it existed in 1900—that is, the cities and incorporated towns then having 2,500 inhabitants or more—contained 26,657 inhabitants, or 28.8 per cent of the total population, while 65,874 inhabitants, or 71.2 per cent, lived in rural terri-

tory. There has thus been a slight increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

The 41 towns of less than 2,500 inhabitants each have an aggregate population of 22,866, or 15.7 per cent of the total population of the state. These towns comprise 6 having from 1,000 to 2,500 inhabitants each, with a combined population of 9,395; 10 having from 500 to 1,000 inhabitants each, with a combined population of 7,077; and 25 having less than 500 inhabitants each, with a combined population of 6,394. The population living in unincorporated territory represents 54.7 per cent of the total population of the state.

The table on page 1105 shows further that in all cities and incorporated towns, including those of less than 2,500 inhabitants, there was in 1910 a population of 66,087, or 45.3 per cent of the population of the state. The population of all cities and incorporated towns, as they existed in 1900, was 39,382, or 42.6 per cent of the population of the state.

Table I of Chapter 2 shows that of the three counties of Wyoming which had urban population in 1900, one had a larger proportion and two a smaller proportion in 1910 than in 1900. Four counties wholly rural in 1900 were partly urban in 1910, while five counties and the one combination of counties were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of these same places

is then compared. Thus, as shown in the table below, the total population in 1910 of those cities and towns which at that time had 2,500 inhabitants or more was 43,221; in 1900 the total population of these same places was 33,526. It may be noted that the latter figure exceeds the total population in 1900 of those cities and towns which at that time had over 2,500 inhabitants each, 26,657 (see table on p. 1105), by 6,869. The difference is the result of the passage, since 1900, of certain communities from the rural to the urban class.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the combined population of cities and towns having 2,500 inhabitants or more in 1910 and the population of the remainder of the state.

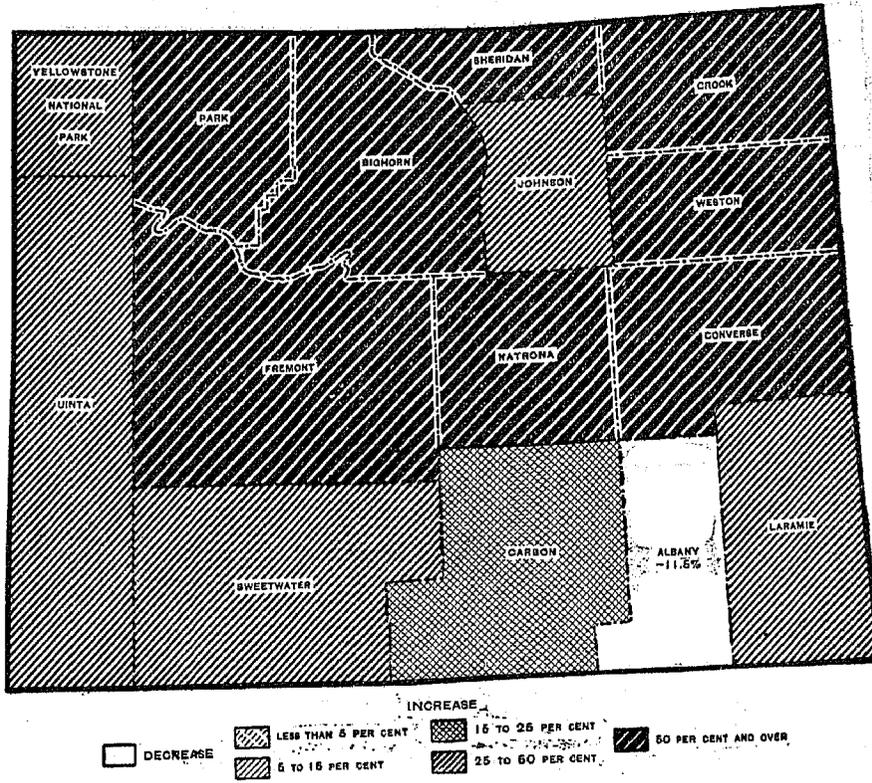

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state.....	145,965	92,531	53,434	57.7
Cities and towns of 2,500 or more in 1910.....	43,221	33,526	9,695	28.9
Remainder of the state.....	102,744	59,005	43,739	74.1

A comparison of the total population in 1910 of the cities and towns having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the above table, shows an increase of 28.9 per cent. This represents the rate of growth of urban communities as previously defined. During the same period the rural population, comprising that of the remainder of the state, increased 74.1 per cent. Rural population thus increased about two and one-half times as rapidly as urban population. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent.

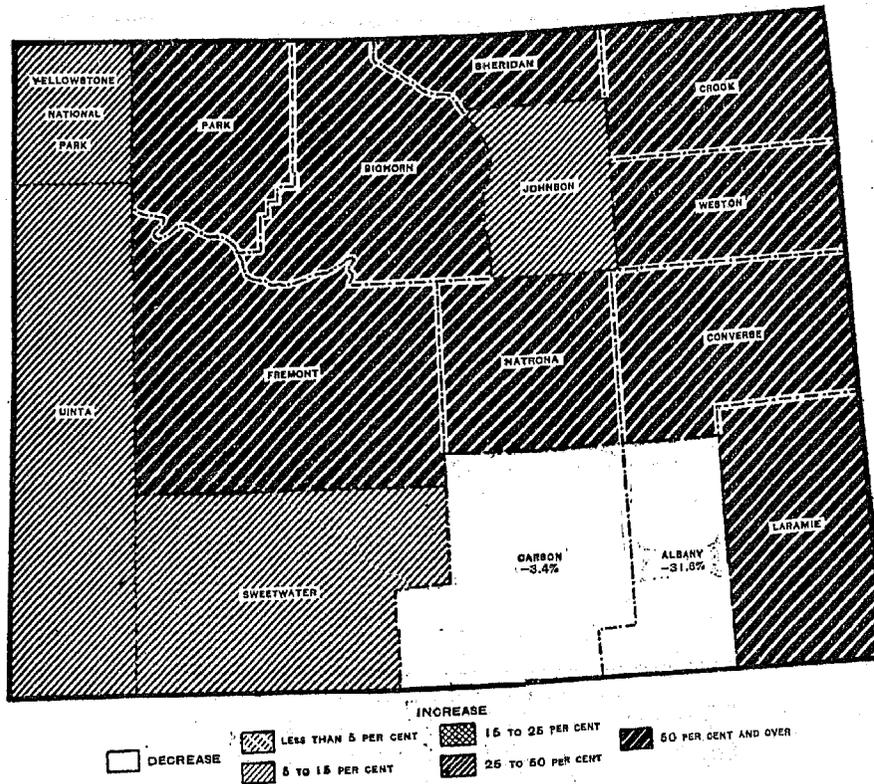

PER CENT OF INCREASE OR DECREASE OF POPULATION OF WYOMING, BY COUNTIES: 1900-1910.

In case of decrease the per cent is inserted under the county name.

TOTAL POPULATION.

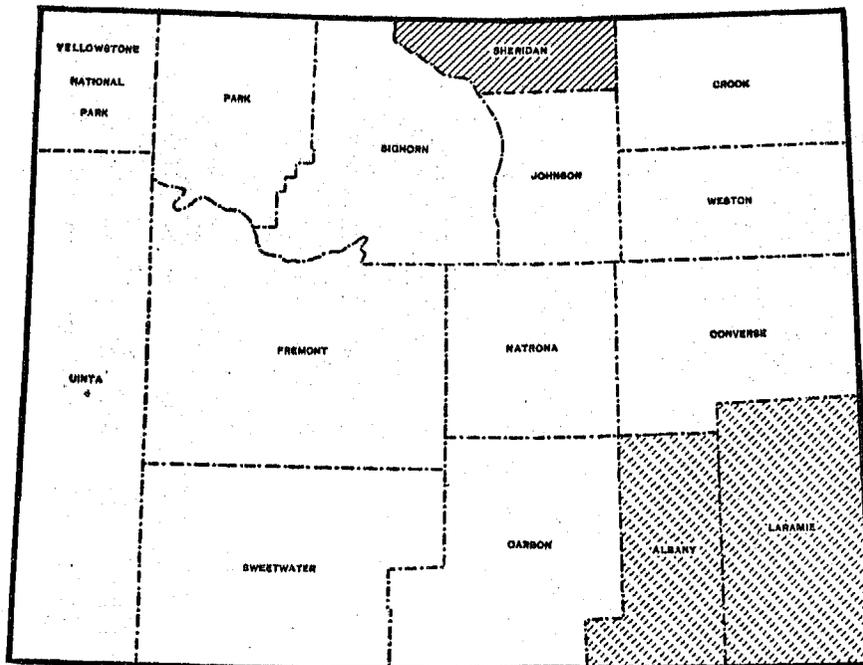

RURAL POPULATION.

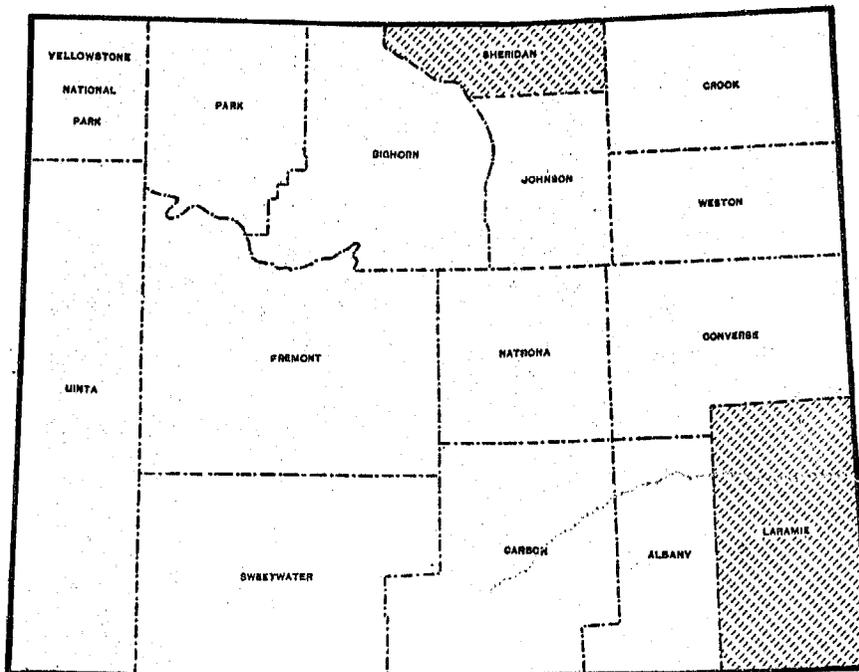

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

DENSITY OF POPULATION OF WYOMING, BY COUNTIES: 1910.

TOTAL POPULATION.

RURAL POPULATION.

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

POPULATION—WYOMING.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890.

[The words "district" and "precinct" mean election district and election precinct, respectively. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

District 8 ³⁵	777			⁶ Part taken to form part of precinct 18 in 1904 and parts annexed to precincts 10 and 13 in 1904.			

⁷ Part taken to form part of precinct 18 in 1904.
⁸ Part of precinct 8 annexed in 1904; parts annexed to precincts 11 and 12 in 1904.
⁹ Part of precinct 10 annexed in 1904.
¹⁰ Part of precinct 10 annexed in 1904; part annexed to precinct 16 in 1904.
¹¹ Part of precinct 3 annexed in 1904.
¹² Parts taken to form precincts 20 and 21 and part of precinct 19 in 1904.
¹³ Part taken to form part of precinct 19 in 1904; part of precinct 12 annexed in 1904.
¹⁴ Organized from parts of precincts 8 and 9 in 1904.
¹⁵ Organized from parts of precincts 15 and 16 in 1904.
¹⁶ Organized from part of precinct 15 in 1904.
¹⁷ Not returned by districts in 1890.
¹⁸ Part of district 3 annexed to Cheyenne city in 1900.
¹⁹ Returned as Wheatland precinct in 1900.
²⁰ Incorporated in 1905.
²¹ Returned as Hartville precinct in 1900. Part taken to form district 6 in 1900.
²² Incorporated in 1900.

²³ Organized from part of district 5 in 1900.
²⁴ Incorporated in 1902.
²⁵ Returned as Torrington precinct in 1900.
²⁶ Incorporated in 1908.
²⁷ Organized from Arcola, Ariosa, Badger, Bordeaux, Chugwater, Egbert, Fort Laramie, Glendo, Granite Canon, Grant, Heala, Hubert, Iron Mountain, Islay, La Grange, Lakoview, Little Bear, Little Horse Creek, Macfarlane, Patrick, Phillips, Pine Bluff, Rawhide, Salem, Upper Horse Creek, and Uva precincts in 1908.
²⁸ County total includes population (935) of Casper precinct, taken to form districts 2 and 3; and population (109) of Lone Bear and Powder River precincts, taken to form district 8, since 1900.
²⁹ Returned as Muddy precinct in 1900.
³⁰ Organized from part of Casper precinct in 1904.
³¹ Returned as Bessemer precinct in 1900.
³² Returned as Fremont precinct in 1900.
³³ Returned as Johnstown precinct in 1900.
³⁴ Returned as Ervay precinct in 1900.
³⁵ Organized from Lone Bear and Powder River precincts in 1904.
³⁶ Organized from districts 1, 11, 14, 23, 24, 25, 26, and 27, and parts of districts 12, 13, and 21 of Big Horn County in 1909 (organization effective Jan. 1, 1911).
³⁷ Incorporated in 1901.
³⁸ No comparison of population can be made; county redistricted in 1910.
³⁹ Districts 4, 5, and 6 returned as district 4 in 1900.
⁴⁰ Returned as old district 5 in 1900.
⁴¹ No comparison of population can be made; county redistricted in 1908.
⁴² Incorporated in 1910.

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Wyoming by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of three general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for Cheyenne, the only city of more than 10,000 inhabitants; and Table III for places of 2,500 to 10,000.

A series of summary tables (numbered 1 to 12) reproduces from the general tables the more important state totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had

attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Wyoming, 80,696, or 55.3 per cent, are native whites of native parentage; 32,504, or 22.2 per cent, are native whites of foreign or mixed parentage; 27,118, or 18.6 per cent, are foreign-born whites; and 2,235, or 1.5 per cent, are negroes. The corresponding percentages in 1900 were 51.9, 26.5, 17.9, and 1, respectively, the proportion of native whites of native parentage having increased during the decade. The 1,842 Chinese and Japanese constitute 1.3 per cent of the population and the 1,486 Indians, 1 per cent. In 12 of the 14 counties the proportion of foreign-born whites ranges from 10 to 25 per cent; the maximum percentage, 44.2, is that for Sweetwater County. The proportion of native whites of foreign or mixed parentage ranges from 15 to 25 per cent in 12 counties, and exceeds 25 in 2 counties. (See maps on page 1119.)

Of the urban population, 51.7 per cent are native whites of native parentage; of the rural, 56.8 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 25.1 and 21.1 per cent, respectively. The percentage of foreign-born whites is 19.1 in the urban population and 18.4 in the rural; the percentage of negroes is 2.4 in the urban and 1.2 in the rural; while the Indian population is almost exclusively rural.

Sex (Table 2).—In the total population of the state there are 91,670 males and 54,295 females, or 168.8 males to 100 females. In 1900 the ratio was 169.4 to 100. Among native whites the ratio is 147.1 to 100 and among foreign-born whites, 287.2 to 100. In the urban population there are 151.4 males to 100 females, and in the rural, 176.9.

State of birth (Tables 3 and 4).—Of the total native population—that is, population born in the United States—27.2 per cent were born in Wyoming and 72.8 per cent outside the state; of the native white population, 73.3 per cent were born outside the state; of the native Indian, 5.4 per cent; and of the native negro, 93 per cent. Persons born outside the state constitute approximately the same proportion of the native population in urban as in rural communities.

Foreign nationalities (Table 5).—Of the foreign-born white population of Wyoming, persons born in Austria represent 14.6 per cent; England, 11; Germany, 9.7; Sweden, 9.2; Italy, 7.2; Greece, 7.1; Scotland, 6.7; Canada, 5.2; Finland, 5.1; Ireland, 5; all other countries, 19.1. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, England contributed 14.9 per cent; Germany, 13.6; Austria, 9.2; Ireland, 8.8; Sweden, 7.6; Scotland, 7.1; Canada, 6.5; Italy, 4.2; Denmark, 3.9; Finland, 3.6; Greece, 3.2.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 63,201, representing 43.3 per cent of the population. Of such males, 48.6 per cent are native whites of native parentage, 17 per cent native whites of foreign or mixed parentage, 28.9 per cent foreign-born whites, 2.1 per cent negroes, 0.7 per cent Indians, and 2.8 per cent Chinese, Japanese, and all other. Of the 18,263 foreign-born white males of voting age, 6,837, or 37.4 per cent, are naturalized. Males of militia age—18 to 44—number 54,654.

Age (Tables 7 and 8).—Of the total population, 10.5 per cent are under 5 years of age, 16.3 per cent from 5 to 14 years, inclusive, 21.2 per cent from 15 to 24, 37.8 per cent from 25 to 44, and 14 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 4.4 per cent of this class being under 15 years of age, while 76.9 per cent are 25 years of age and over. Of the native whites of foreign or mixed parentage, 41.7 per cent are 25 and over and of the native whites of native parentage, 46.6 per cent.

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to urban communities explains this at least in part. Of the urban population, 40.2 per cent are from 25 to 44 years of age, inclusive, and of the rural population, 36.8 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 35,776, of whom 23,020, or 64.3 per cent, attended school. In addition to these, 297 children under 6 and 428 persons 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 60.2; for girls, 69.1. For children from 6 to 14 years, inclusive, the percentage attending school was 84.5. The percentage for children of this age among native whites of native parentage was 84.9; among native whites of foreign or mixed parentage, 85.9; among foreign-born whites, 76.4; and among negroes, 84.7. (See Table I.) There is little difference between urban and rural communities as regards the percentage of school attendance.

Illiteracy (Table 10).—There are 3,874 illiterates in the state, representing 3.3 per cent of the total population 10 years of age and over, as compared with 4 per cent in 1900. The percentage of illiteracy is 0.3 among native whites, 9.7 among foreign-born whites, 51.2 among Indians, and 5 among negroes.

For all classes combined the percentage of illiterates is 2.8 in urban communities and 3.5 in rural. For each class separately, except the small group of negroes, the percentage is somewhat higher in rural communities than in urban.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 1.4. (See Table I.)

Marital condition (Table 11).—In the population 15 years of age and over, 56.3 per cent of the males are single and 23.5 per cent of the females. The percentage married is 39.7 for males and 69.1 for females, and the percentage widowed 2.8 and 6.2, respectively. The percentages of those reported as divorced, 0.7 and 1, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due partly to the excess of males in the total population, and partly to the fact that women marry younger. Thus 14.6 per cent of the females from 15 to 19 years of age are married, as compared with 0.6 per cent of the males, and 61.9 per cent of the females from 20 to 24 years are married, as compared with 12 per cent of the males. In the next age group, 25 to 34 years, the effect of the excess of males in the population is clearly apparent, 84.7 per cent of the females being married, as compared with 39.3 of the males. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 41 for males and 79.2 for females; native whites of native parentage, 40.5 and 68.7, respectively; native whites of foreign or mixed parentage, 38.8 and 63.1; Indians, 60.3 and 66.6; negroes, 25.9 and 54.6.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married is slightly lower for males, but decidedly higher for females, in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Wyoming is 30,969, and the total number of families 32,092, indicating that in comparatively few cases does more than one family occupy a dwelling. (See Table I.) The average number of persons per dwelling is 4.7, and the average number per family, 4.5.

¹ In computing this increase the population of Wind River Indian Reservation in 1900 (1,961) has been deducted from the total population of the county in order to make that total comparable with the total for 1890, which does not include the population of that reservation.
² Comparable figures not available; for combined figures, see note on page 1125.
³ Includes 49 whites, specially enumerated in 1890, not distributed by counties.
⁴ Native whites having both parents born in countries other than specified, and also those having both parents of foreign birth but born in different countries.

NOTES REGARDING CHANGES IN BOUNDARIES, ETC., OF COUNTIES.

ALBANY.—Part taken to form part of Converse in 1887.
 BIGHORN.—Organized from parts of Fremont and Johnson in 1897; part taken to form Park in 1900.
 CARBON.—Part taken to form Natrona in 1890.
 CONVERSE.—Organized from parts of Albany and Laramie in 1887.
 CROOK.—Part taken to form Weston in 1891.
 FREMONT.—Organized from part of Sweetwater in 1884; part taken to form part of Bighorn in 1897.
 JOHNSON.—Name changed from Pease in 1879; parts taken to form Sheridan in 1887 and part of Bighorn in 1897.
 LARAMIE.—Part taken to form part of Converse in 1887.
 NATRONA.—Organized from part of Carbon in 1890.

PARK.—Organized from part of Bighorn in 1911 (act providing for organization passed in 1909).

SHERIDAN.—Organized from part of Johnson in 1887.

SWEETWATER.—Part taken to form Fremont in 1884.

WESTON.—Organized from part of Crook in 1891.

YELLOWSTONE NATIONAL PARK.—Geographically located within the limits of Wyoming, Idaho, and Montana; total population returned in Wyoming.

NOTE.—*Bighorn and Park Counties combined.*—Total population: 1910, 13,795; 1900, 4,328; increase, 1900-1910, 9,467; per cent of increase, 218.7. Rural population—1910, 13,795; same territory in 1900, 4,328; per cent of increase, 218.7. Rural population—1900, 4,328.

ALASKA.

NUMBER OF INHABITANTS AND COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

INTRODUCTION.

Date of enumeration.—At the Thirteenth Census the date of enumeration in Alaska generally was December 31, 1909, or a time as near that date as conditions permitted. A midwinter date was determined upon, after careful consideration of the conditions under which the field work must be done, as being on the whole more favorable for census taking in Alaska than April 15, 1910, the date of the general enumeration in the United States. The great extent of Alaska's territory, however, and the varying conditions prevailing in different sections at any given season of the year, as well as the inaccessibility of certain regions, and the wide dispersion of a small population over a large area, made strict adherence to any one date impracticable, if an accurate count of the population was to be achieved. In some localities, therefore, where the field work could not advisedly be undertaken on or immediately following December 31, the enumeration was begun prior to that date, while in others it was deferred until late in the winter, or until early spring. The specific conditions which were taken into account in determining upon the date of enumeration in the several localities are indicated in some detail in the section giving an account of the field work in 1910. At the census of 1900 enumerators went into some portions of the territory as early as July, 1899, and the work of enumeration continued till October, 1900, a period of 15 months being required for its completion.

Topics covered for 1910.—The accompanying tables present statistics for the territory as a whole relating to number of inhabitants, increase of population,

color or race, nativity, parentage, sex, age, marital condition, state of birth of the native population, country of birth and year of immigration of the foreign-born population, males of voting and militia ages, citizenship, school attendance, illiteracy, inability to speak English, and number of dwellings and families. Statistics relating to sex and age for Indians of full blood and of mixed blood, by stocks and tribes, are also given in a separate table. All topics covered by the Thirteenth Census are included except occupations and ownership of homes. In the general table (Table 31) on page 1152 statistics relating to number and characteristics of population are given in detail for the four judicial districts, and in Table 32 detail is given for the 11 largest towns in Alaska.

Earlier censuses.—The census of 1910 was the fourth enumeration of the population of Alaska by the United States Government. Although the territory was purchased from Russia in 1867, no enumeration was made of its population at the census of 1870. The Superintendent of the Tenth Census—that of 1880—designated special agents to canvass the territory, and make such an enumeration as might be possible. At that census the population of all accessible settlements was enumerated, and this partial count was supplemented by estimates—based mainly upon records, or upon the personal knowledge of missionary priests—for those regions which could not be visited by the special agents. The returns were tabulated for six census districts. At the census of 1890 the territory was divided into seven census districts and the area actually canvassed by agents of the Census

HISTORICAL NOTE.—Alaska derives its name from an English corruption of the native word *Al-ay-ek-sa*, probably meaning "The great land" or "Mainland."

The region now known as Alaska was first explored by the Russian officers Bering and Chirikov in 1741. Russian traders and trappers soon entered the country and through their activity other nations became interested in this region. Spanish expeditions in 1774 and 1775 visited the southeastern shore, and in 1778 the English explorer, Capt. James Cook, made extensive surveys of the coast for the British Government.

The first settlement was made by the Russians at Three Saints on Kodiak Island in 1784, and in 1804 the Russian-American Company founded Sitka, making it the seat of government in the following year.

In 1799 the trade and regulation of the Russian possessions in America were given over to the Russian-American Company for a term of 20 years, which was afterwards twice renewed for similar periods.

In 1821 Russia attempted by *ukase* to exclude foreign navigators from Bering Sea and the Pacific coast of her possessions, which caused a controversy with the United States and Great Britain. The question was settled by a treaty with the

United States in 1824 and one with Great Britain in 1825, by which the boundaries of the Russian possessions in America were permanently fixed.

In March, 1867, Alaska was purchased by the United States for the sum of \$7,200,000 in gold, and in October of the same year the formal transfer was made at Sitka. From 1867 to 1877 Alaska was governed by the War Department, although the customs were from the beginning collected by the Treasury Department, and with the latter the control rested from 1877 until the passage of the act of 1884. This act extended over Alaska the laws of the state of Oregon so far as they were applicable, created a judicial district and a land district, put in force the mining laws of the United States, and gave the country an administrative system.

The influx of settlers after the discovery of gold in the Klondike in 1896 rendered more adequate laws necessary. In 1899 and 1900 Congress made provisions for a code of civil and criminal law, and in 1903 passed a homestead act. In the meantime a serious boundary dispute had arisen between the United States and Canada regarding the interpretation of the treaty of 1825. This was settled in 1903 by an agreement whereby the seacoast of Canada extended no further north than 54° 40'.

By an act of May 7, 1906, Alaska was authorized to elect a delegate to Congress.

Office was more extensive than the area canvassed in 1880. The returns for 1890 were published as a separate report of 282 pages on the population and resources of Alaska. In his letter of transmittal for this report, the Superintendent of the Census comments briefly as follows upon the difficulties encountered by the census enumerators in Alaska:

This remote portion of our territory presents difficulties in the way of enumeration scarcely conceivable in the older portion of the country. On an estimated area greater than that of all the states north of Tennessee and east of the Mississippi there is a population less than in most single counties of the populous east. Let one imagine that all railroads and wagon roads, all vehicles and horses, were here wanting; let him imagine that enumerators could only reach this eastern section by a coasting vessel or pierce its interior by the Ohio River; let him imagine this section pushed north till its upper portion was in almost perpetual frost and its one navigable river was open but a few weeks in a year, and he can begin to measure the obstacles met in mountainous Alaska.

A part of the people are migratory, and the same band is liable to be reported from two places, or a spot correctly reported as populated is liable to be found desolate when visited later.

In 1900 two special agents, well equipped for the service by previous residence in the territory and by personal knowledge of the places and people within their respective districts, were appointed to supervise the enumeration. In this year, owing to the greatly increased facilities for communication, consequent in part upon the opening up of the lately discovered gold-fields, conditions were more favorable, and the census was more nearly complete and accurate than either of the two preceding enumerations.

Conditions of the field work in 1910.—Under discretionary authority given to the Director of the Census by the act providing for the Thirteenth Census, the territory of Alaska was divided for purposes of enumeration into four census districts. These are not, however, shown in the tabulation of the returns, since they were defined merely for administrative purposes, and did not entirely correspond with the four civil divisions permanently established in 1909, namely, the judicial districts of Alaska. A chief special agent was appointed to supervise the work in each of the census districts. By special arrangement with the United States Commissioner of Education, a local district school superintendent was given charge of the work in each of the first three districts, and a representative of the Census Bureau was designated to act in a similar capacity in the fourth district. The organization of the field work in 1910, and the conditions prevailing in the several districts, are briefly indicated in the following paragraphs.

The first census district, with headquarters at Juneau, was in fact coextensive with the first judicial district, and embraced the southeastern coast region lying west of British Columbia and extending north from latitude 54° 40' to the meridian constituting the Yukon boundary. The work of enumeration in this district was begun on December 27, 1909, and on February 4, 1910, the chief special agent in charge reported

the work practically completed. Twenty-one of the 26 subdistricts into which this general district was divided embraced each a town or village with its immediate vicinity. The 21 enumerating agents appointed to these subdistricts had little or no traveling to do. Five subdivisions covered the remaining area, and the five agents assigned to these sections were traveling constantly, for the most part in gasoline launches. Every mining, logging, or fishing camp was reached, and all fishermen on the halibut boats were enumerated either at their headquarters or at the fishing grounds.

The enumeration of the Indian population in this section of Alaska was all practically done by teachers, and largely during the Christmas holidays. As this season is the great feasting time for the Indians, they were very nearly all of them at home. The few that were in camp were enumerated by the traveling special agents. As the older Indians commonly do not know their ages by years, an approximately correct statement of age could be made only by resort to some such expedient as is described in the following account taken from an enumerator's report:

I resorted to the following devices to fix the age and birth month. Every native I have found remembers some great event in his child life and can tell me how big he was at the time—"as large as that"—indicating some child of known age. These dates I have fixed as follows: (1) A great war between the Sitka Indians and the Russians at Sitka (1855); (2) a war between the Sitka Indians and the Wrangell Indians at Sitka (1851); (3) the opening of the ——— mines (1883); (4) the founding of Juneau (1881); (5) the going of the Russians from Sitka, and the coming of the United States soldiers and gunboats (1867); (6) the solar eclipse (1869); (7) the great earthquake (date not given); (8) the recent smallpox epidemic in Hoonah (1902); (9) the great smallpox epidemic over all Alaska (1839); (10) the coming of Mr. McFarland and wife to Hoonah (1884); (11, 12, and 13) the building of the church and of the school and the death of Mr. McFarland.

This enumerator reported a calendar of birth months, in which April is the month of "sea otter hunting;" May, the month of "make gardens;" June, the month of "salmon first run in bay;" July, the month when "seal babies come," and "first berries ripen;" August, the month of "plenty berries;" October, the month of "first snow—about." January and February are mainly identified as the time following Christmas; and other months by Indian names for certain seasons.

Similar devices were employed in other sections. The chief special agent in the third census district reported that the year of birth of natives was often identified with reference to "some epochal event"—"the big sickness, the wreck of a whaler, etc.," and the month of birth by some such question as "Was it in squirrel time?" "When the ptarmigan begin to turn white?" The report of the agent in the fourth census district observes that the Indians compute time by "suns" and "snows." As regards marriages, births, and deaths, enumerators were obliged to convert this natural calendar into years and months.

Except that it did not include the recorder's district of Nabesna, the second census district, with headquarters at Seward, was coextensive with the third judicial district. The first and second census districts thus embraced the whole extent of the Alaskan-Pacific coast region from the point farthest south to the ultimate western point located in the Aleutian Islands. The second district alone embraced more than 2,000 miles of coast, dotted with settlements, some accessible in winter by dog sled, some by water in winter, and some only by water in summer. The inland region of this section is for the most part a snow-bound expanse in winter, without trail. Traveling across rivers and valleys from one settlement to another, the enumerator encounters open streams, dangerous storms, snowslides, and sudden changes in the weather, from wet to intense cold, as the winds swing from the open sea to the interior. Since large areas are, in fact, accessible only to the experienced arctic traveler, and since there is no section in the district where work could safely be intrusted to inexperienced travelers, it was not deemed advisable to employ teachers as enumerators. The best man available for each section was selected and his work carefully watched. Subdivisions were created in the second census district according as the areas could best be covered by dog sled or by boat, and according as most accurate returns could be secured in winter or in summer. In five of these subdivisions the census was taken as of December 31, 1909, and in thirteen of them as of April 15, 1910. For the interior sections enumerators were detailed to begin work in January. In other sections work was begun at such later dates as would afford greatest speed of work and most accurate returns.

The interior of Alaska is inhabited largely by miners and by the native Indian tribes; the coast, by fishermen. Many miners leave Alaska in the fall and return during the late winter or early spring months—that is, from February to the break-up of the ice and the opening of navigation. Along the coast are located many canneries, and the fishing fleet for these canneries is arriving from March until June. The construction of a railroad, in progress at the date of the Thirteenth Census, at Cordova, had caused an influx of laborers who were temporarily residing in the Valdez district.

The population of the second district thus embraced, in addition to the settled population, a large proportion of migratory miners en route to the interior, of fishermen who were generally at sea, and of men temporarily employed in railroad construction work. As is pointed out by the chief special agent in charge of the field work in this district, accurate enumeration of these classes called for the exercise of unremitting vigilance. The coast, the fleets, and the inland country must be so canvassed as to miss none either of the transient or of the resident inhabitants on land or water, and yet avoid duplication in the enumeration of a shifting population.

In accordance with instructions from the central office special agents were placed at each of the ports of entry, and all arrivals on vessels were enumerated. These arrivals were credited, on separate sheets, in each case to the community reported as the destination of the traveler. By this distribution of the arrivals, the population of the Alaskan communities during the business season of the year was determined accurately, those individuals who make their living in Alaska but spend more or less regularly some portion of the year in the United States being added to the settled population of the several communities.

Of persons employed in the canning industry only those were enumerated who were, on April 15, 1910, in Alaskan ports, or on the high seas Alaska-bound. Thus those who were in San Francisco, Seattle, Portland, or other ports on April 15 were omitted from the census of Alaska, while all others were enumerated. In this way duplication was avoided, and Alaska was credited with about one-third of the population found there in the summer employed in the canning industry. About two-thirds, or approximately 6,000, of the persons employed in this industry, were resident in the United States on April 15 and were so enumerated.

Among the foreigners coming in for railroad work were many who were suspicious of the census, conceiving it to be a canvass preliminary to the assessment of some tax. These men avoided the enumerator by shifting from one lodging house to another, and in two instances arrests were made as the only means of securing the information required. As it became impossible for one man to enumerate these arrivals in the Valdez district during the short time that they remained in town, a second enumerator was placed on the trains to complete the enumeration.

The extreme hardships borne by some of the enumerators in the territory may be illustrated by the following instance, noted among others by the chief special agent in charge of the second census district:

Enumerator No. 12 was caught in one of those severe storms which occasionally sweep the passes from the Pacific to the Bering Sea. In this treeless coast region there was no shelter, and no wood available for fuel. After three days, during which a blinding snowstorm continued, a start was determined upon, since the supply of food for the dogs had been exhausted and it was feared that the dogs would freeze in their state of exhaustion and hunger. On the way to the nearest camp the party was blown off a slope into an open mountain creek. The sled had to be rolled over to get it out of the stream and to free the baggage of water. Some of the baggage was spilled in the upset, and since life depended upon speed in the race to make a distant camp before freezing, the lost baggage, which included the census pouch, was not missed until the sled was unpacked. With clothing frozen stiff and various parts of the body frosted the little party succeeded in reaching the isolated camp for which they had set out. Three attempts were made subsequently to retrace their steps in order to recover the pouch but the storm was too severe to face. The agent enumerated the camp on some waste paper and returned about 200 miles for more census supplies.

This agent's next experience was in the mountains, where he found one of the survivors of the wrecked steamer *Farallon*,

who had been living on native food, had frozen his fingers, and had himself cut off one gangrenous member with his knife. The enumerator could not leave a fellow being in this condition, and conveyed him to the nearest settlement, which was fully 60 miles away. At another place one of the men in his party stepped into the water and froze his foot, which turned black, but afterwards recovered without serious consequences. The agent making this circuit had been over all of the route before, but had never encountered such severe storms. His first landing was delayed 10 days, and he was driven 300 miles in storms.

The following itinerary, as reported by one special agent, indicates the extent of territory covered by some of the men and the modes of traveling:

I left Valdez March 12, 1910, and proceeded (by dog teams, with about 1,000 pounds of provisions, camp equipment, and supplies, and one guide) over Thompson Pass, an altitude of about 3,000 feet; thence to Tonsina River (77 miles north from Valdez); thence down Tonsina River (30 miles) to Copper River; thence down Copper River, enumerating the men employed by the railroad company and Indians along Copper River, down as far as the mouth of the Bremner River.

Copper River is a large stream, being from 1 to 2 miles wide in many places, and I found the river open and running a deep channel of water in numerous places, making it very dangerous and difficult to travel upon. In some places we had to climb precipitous cliffs from 100 to 200 feet high, to get around the channels of open water, dragging dogs, sled, and supplies with us.

I also put in a good deal of time in hunting up men at work on the steep mountains, who were cutting ties and timber for the railroad construction; the deep snow also making it slow and hard traveling.

After finishing enumerating on Copper River, in my district, I proceeded down the river to Miles Glacier, and from there took the train into Cordova, thence by boat to Valdez, arriving in Valdez on May 8.

I then enumerated the town of Valdez and vicinity, and left Valdez May 18 at 9 a. m., with a gasoline launch and engineer, to enumerate Fort Liscom, Ellemar, Tetilek, and other points on the easterly side of Prince William Sound.

I covered a distance of several hundred miles, being compelled to travel to the heads of several bays and inlets, for a distance of 15 to 20 miles, to find the scattered miners and prospectors. There were no special difficulties encountered in this work, aside from the long distances traveled to reach a few persons.

I arrived in Valdez at 6 p. m. on May 28, 1910, and on the 29th, 30th, and 31st of May completed my work in and around Valdez, getting various information and finding certain people whom I had been unable to find before leaving Valdez, and on the evening of May 31 I completed and closed my work.

In certain sections of the coast region large boats could not enter the ports, and men experienced in operating a "bidarky," or three-holed skin boat, had to be secured for the work. Other sections were canvassed with the aid of the United States Revenue-Cutter Service. Without the courtesy of this service, no accurate census of the Aleutian Islands could have been taken. For this work the exclusive use of a cutter for several days was extended to the census agent, and every assistance possible was given by the officers of the service.

The chief special agent in charge of the field work in the third census district—which, with headquarters at Nome, embraced the second and part of the fourth judicial districts, covering the extreme northern portions of the mainland and the western coast regions—reported an exceptionally severe winter. In Nome

lower temperatures prevailed than had ever before been officially recorded. "Besides the unusually low temperature," to quote from the agent's report, "the winter was an endless series of severe blizzards. In this vicinity (that is, about Nome) there were several cases of death by freezing. But, owing to the fact that the men appointed special agents were experienced, trail-hardened men, I am glad to report that none of them suffered any serious results, although several report narrow escapes."

The fourth census district, with headquarters at Fairbanks, embraced a large section of the central interior of Alaska. The conditions prevailing in this area in 1910 differed materially from the conditions reported at the census of 1900. In 1900 the greater portion of the population was reported from well-defined camps, comparatively easy of access, while in 1910, as shown by the schedules, the population was distributed along the creeks and rivers of the district to such an extent that the agents employed in the enumeration were obliged to cover every stream and the intervening country as well. As compared with the summer, the winter is much the more favorable season for traveling throughout this entire region. The following account of the work in the district is taken from the report of the chief special agent in charge:

The work was performed during the severest winter known in this part of Alaska by the oldest settlers there, and the men kept consistently and conscientiously at it until completed. There did not appear to be a man who did not have a pride in his work, an anxiety to create a record for traveling time, a desire to enumerate all the people in the district assigned to him, and to have to his credit less loss of time because of extreme weather than any of the other agents.

That the service lost none of the men from freezing to death, and that every man returned safely is a matter of congratulation and good fortune, from the fact that there were in this part of Alaska more deaths from the weather this past winter than the total recorded in all previous years—cases in which those who met such deaths did not begin to go through the sacrifice and privation that these agents of the service did.

All of the men in the service other than those employed in the Fairbanks district covered hundreds of miles, over the ice and snow, in weather ranging from 30° to 70° below zero, the average temperature being probably about 40° below.

Because of the absolute lack of beaten trails and the fact that the snow lies on the ground loose like so much salt, no matter what the depth may be, it was necessary throughout all of their work to snowshoe ahead of their dog teams; and when one considers their isolation, often traveling for days without shelter other than a tent and fur robes, it can be understood to what sacrifice some of these men went to visit some of these far-away prospectors' cabins and claims. However, no man who travels in this part of the country ever considers there is any hardship unless there is loss of life, and they take their work stoically and good-naturedly, though they drop in their tracks at the end of the day.

I am thoroughly convinced that it would have been a physical impossibility to have made an enumeration of the people in this district at any other season of the year than that in which it was made. During the months of April, May, and June it is impossible to travel across country except where there are Government roads, and they are few in number and located only in the vicinity of Fairbanks. This is true also of the months of August and September. In June or July the only method of travel about the

country is by water and in boats, making it absolutely impossible to reach any persons who are not located on the navigable streams. The time in the summer season would not permit of the canvass and if undertaken with a sufficient number of men would have been at least 400 per cent more expensive. The added numbers of persons who could be enumerated as bona fide residents of the territory during the summer over the winter months would be decidedly negligible in quantity. There are, it is true, several hundred more persons in the district in question in the summer months than in the winter, but they can not by the greatest stretch of the imagination be called bona fide residents from the fact that they return to the states every winter and do not in any sense make their "home" in Alaska.

During the winter season when the ground is covered with snow from 3 to 20 feet in depth it is possible to travel with dog teams over the frozen streams and across country from the headwaters of one to another. Also, men are to be secured during the winter season for the salary and allowances allowed under the law to perform the work, since it is a season when they are not so actively employed and there is a chance for their dogs to be revenue bearing. During the summer months men will not take employment at such rates, for the reason that ninety-five out of every hundred men are in the country seeking gold, and the preferable time for the seeking is the summer. Those who do get employment at wages receive from \$5 to \$10 and board (\$3 to \$4), and there would not be a chance of securing men who would pole a boat up and down streams in the summer season for less than \$15 to \$18 per day wages.

During the months of April and May it is impossible to travel anywhere with any degree of safety, because of the thawing of the snow, the overflows in the creeks, and the sloughing away of the ice in the rivers. Travel in these months is considered to be absolutely dangerous, and will not be undertaken by the men in this country even for their own purposes.

It would have taken four times as many men and certainly four to six times as much money to have made the canvass in the summer season.

In addition, the canvass made in the summer would have given to certain localities an erroneous population existing at these localities four months in the year as against eight months elsewhere. Particularly is this true of the typical prospector and the Indian. The former will be found in the summer where gold is sought or mined and the latter where there is a chance to secure a winter supply of fish for himself, his squaw, or "woman," and for his children, or "chickens," although his principal endeavor seems to be along the line of securing a sufficient supply of fish to make dog feed for the winter. Both of these elements among the people return to a stated locality each winter season and make it their home.

I have been unable to find a man in Alaska or out of it who has any knowledge of the conditions there who will acknowledge that a summer census would have been a better one from the standpoint of legitimate enumeration of her people than a winter one.

It is true that the census taken this particular winter did in a measure lose a few people who were out of the territory because of the exposition at Seattle last fall and who remained out for the winter. This was remedied in a measure by the systematic effort on the part of the agents to secure the information for people known to be outside. From the beginning of my stay in Alaska and from the close of navigation every person leaving Fairbanks was enumerated by me personally. From the time of the beginning of the enu-

meration I understand the chief special agents located on the coast adopted a system whereby each incoming person was enumerated at his entrance to the territory. There was also sent out to all persons who had left Alaska during the summer season and whose forwarding addresses were in the possession of the postmasters in the fourth district, some 700 circular letters, many of which have been returned and I assume the people counted. These plans carried on as they were with one end in view, should, I believe, result in the enumeration of every bona fide resident of the territory, even though he may have been temporarily absent.

Since the completion of the work of enumeration there has been a stampede into a part of Alaska, for which had the people been counted in the summer, or in the present season, there would have been an erroneous number reported amounting to several thousand.

In his account of the work of individual enumerators in the fourth census district the chief special agent notes briefly some of the hardships encountered. The enumerator for the Chandalar district crossed and recrossed the Arctic Range, traveling above the timber line for 18 hours at each crossing. At no time after he left Fairbanks did the thermometer rise above 30° below zero. Two of his dogs froze to death, and he himself froze portions of his face several times, and at one time dropped into 6 feet of open water, nearly losing his life. He traveled in many places where no white man had ever been before. The enumerator for the Koyukuk district with his guide, together with the mail carrier and two Indians, was at one time lost in a storm for three days, and was found at the end of that time by a rescue party which came out to locate the mail. Regarding the work in the Tanana district, the chief special agent makes the following statement:

There was probably more difficulty encountered in this district during the course of the canvass than in any of the others for the reason that there was an almost incessant storm and blizzard during the entire time the agent was on the work.

This agent kept steadily at it without loss of a day's time because of the weather and did so without the aid of a guide or assistant. Not less than four times this man was found by other travelers in an exhausted condition and assisted to a stopping place. He lost three dogs during the trip, replacing them from spare dogs carried for the purpose, and several times froze his own face.

That this agent survived the work during the stormy period and came back alive was the wonder of older inhabitants in the country. He was secured for the work after efforts had been made to secure half a dozen other men who refused the assignment.

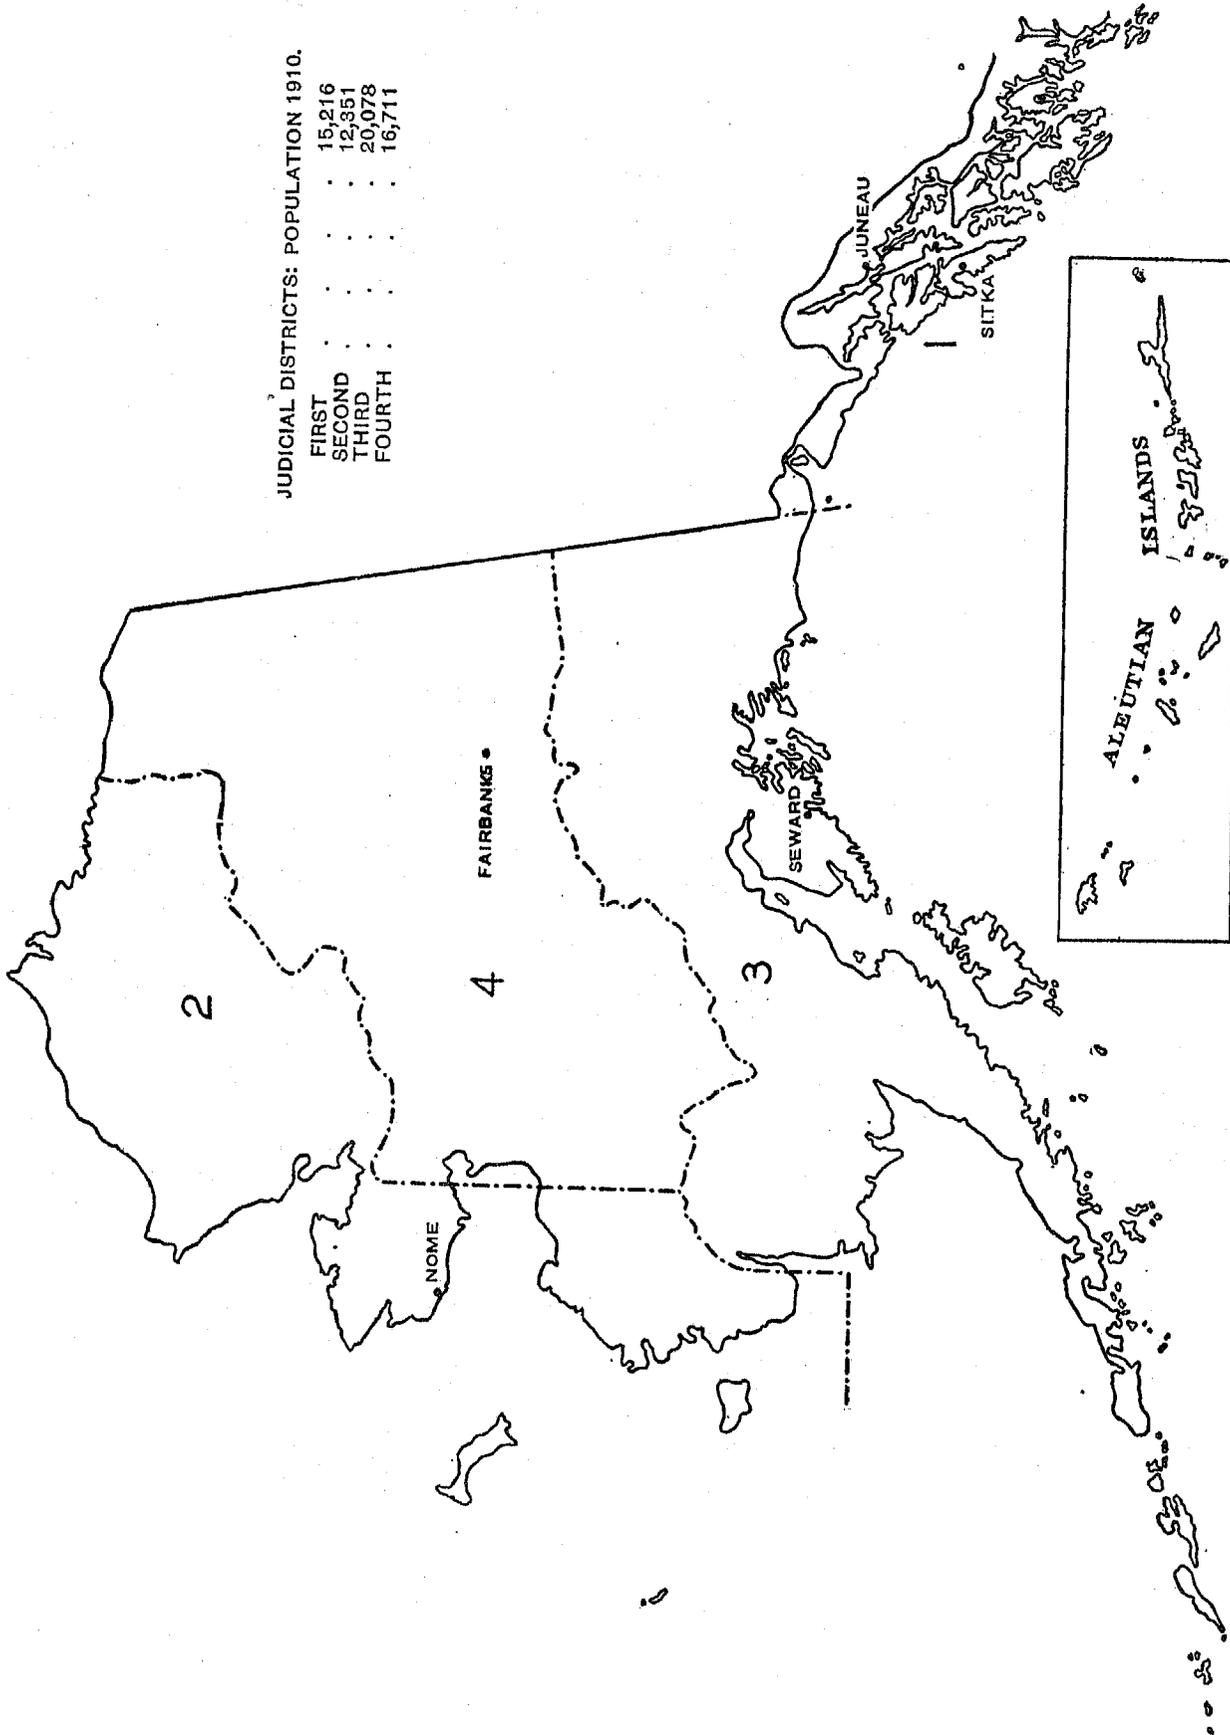

Six men and two women, more than ever has been known before in this district, were frozen on the trails in the locality in which this man worked.

He also assisted in the course of one of his trips in rescuing a couple of trappers who had run out of food and nearly starved in getting to a road house where they were able to eventually get back to town.

JUDICIAL DISTRICTS OF ALASKA.

JUDICIAL DISTRICTS: POPULATION 1910.

FIRST	:	:	:	15,216
SECOND	:	:	:	12,351
THIRD	:	:	:	20,078
FOURTH	:	:	:	16,711

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the territory.—The population returned for Alaska at each of the last four decennial censuses, with the decennial increase or decrease, is given in Table 1. The population returned for 1880 and that for 1890 was, as has been previously noted, partly estimated. As returned at these censuses, the number of inhabitants decreased 1,374, or 4.1 per cent, during the decade preceding 1890. In the following decade, however, the rush of gold seekers to Alaska just

prior to the census of 1900 nearly doubled the population, which increased from 32,052 to 63,592, the increase being 31,540, or 98.4 per cent. Although a considerable number of those enumerated in 1900 did not settle permanently in the territory, and although the Indians and the Chinese decreased in number by more than 6,000 (see Table 5), there was nevertheless a slight increase in the total population (764, or 1.2 per cent) during the decade 1900–1910.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS. ¹	
		Number.	Per cent.
1910.....	64,356	764	1.2
1900.....	63,592	31,540	98.4
1890.....	32,052	-1,374	-4.1
1880.....	33,426		

¹ A minus sign (—) denotes decrease.

Judicial districts and minor civil divisions.—The population returned in 1910 for the four judicial districts into which Alaska was divided by the act of March 3, 1909, was as follows: First, 15,216; second, 12,351; third, 20,078; and fourth, 16,711. These districts are outlined on the accompanying map. Each judicial district is divided into recorders' districts,

which in the aggregate constitute the 42 primary minor civil divisions of the territory. In Table 2 the population of the judicial and of the constituent recorders' districts is given for 1910 only, since the population of these areas can not generally be accurately determined from the census reports for earlier years.

POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890.

Within the recorders' districts the population for 1910 is shown separately in Table 2 for 108 secondary divisions, comprising 14 incorporated towns, 89 unincorporated villages and settlements, and 5 forts. For 44 of these secondary divisions the population for 1900 is given, and for 29 of these 44 the population for 1890 also is shown. For 64 places separately reported in 1910, no population statistics relating to either 1900 or 1890 are contained in the census reports for those years. Classified according to their population in 1910, the distribution of these secondary divisions—that is, incorporated towns and unincorporated villages, settlements, and forts—was as follows:

CLASS.	NUMBER OF PLACES AND SETTLEMENTS.		
	Total.	Incorporated.	Unincorporated.

750 to 999.....	2	2	
1,000 or more.....	7	7	

Incorporated towns.—Table 4 shows the population in 1910 of the incorporated towns of Alaska, with their population in 1900 and 1890, so far as figures are avail-

able. Of the 14 incorporated towns 7 had, in 1910, 1,000 inhabitants or more. The population of Fairbanks, the largest of the towns, was 3,541; of Nome, the second largest, 2,600. The number of inhabitants returned for Nome in 1900 was 12,488; this return, however, included persons on vessels in port who had

been attracted by the discovery of gold in the territory. According to the returns, the population of Skagway, the second largest town in 1900, had decreased during the decade 1900-1910 from 3,117 to 872. In 1910 eight of the incorporated towns were in the first judicial district.

POPULATION OF INCORPORATED TOWNS: 1910, 1900, AND 1890.

Density of population.—The gross land and water area of Alaska is 590,884 square miles, which is nearly equal to one-fifth of the area (3,026,789 square miles) of the United States (exclusive of outlying possessions), and slightly exceeds the combined area of the three Pacific coast states—Washington, Oregon, and California—and Texas. Based upon gross area, the density of population, or number of inhabitants per square

mile of territory in Alaska, was 0.1 both in 1910 and in 1900. This is equivalent to an average area of 9.2 square miles, or 5,888 acres, to each inhabitant. The average number of inhabitants per square mile of territory in the United States (exclusive of outlying possessions), based upon the gross area, was 30.4 in 1910, while the average area to each inhabitant was 21.1 acres.

COLOR OR RACE, NATIVITY, PARENTAGE, AND SEX.

Color or race and nativity.—Table 5 shows the population of Alaska, as returned at the censuses of 1910 and 1900, distributed according to color or race and nativity and for the white population according to parentage. In this and in other tables the term "native parentage" comprises persons having both parents born in the United States (including Alaska and other outlying territories or possessions), the term "foreign parentage" comprises persons having both parents born in foreign countries, and the term "mixed parentage" comprises persons having one parent born in the United States and the other foreign born. The aggregate native population embraces all persons living in Alaska who were born in the United States or in any of its outlying possessions. It therefore includes not only natives of Alaska but also many immigrants to Alaska from other sections of the country. The Indian population is almost entirely native. During the decade 1900-1910, the native population decreased from 50,931 to 43,921, the decrease of this element (7,010) being very nearly equal to the increase of the foreign born (7,774). The proportion native decreased from 80.1 per cent in 1900 to 68.2 per cent in 1910.

Owing to the conditions under which the census of 1900 was taken, the figures representing the various classes of the white population at that census are defective and not comparable with those for 1910. Of the gold seekers who were rushing to Cape Nome

at the time of the 1900 census many were enumerated from steamship lists which supplied no information as to nativity or parentage. These were classified and tabulated, however, as native of native parentage, but as many of them, of course, were of foreign birth or foreign parentage the total native white population of native parentage, as shown in the report for 1900, was too high and the totals for the other white classes were correspondingly too small. The decrease between 1900 and 1910 in the number reported as native white of native parentage and the increases in the numbers reported for the other white classes are in large part attributable to this defectiveness of the 1900 classification. These inaccuracies in the classification by nativity and parentage would not, however, affect the completeness or comparability of the returns for the total white population. The total number of whites increased 5,907, or 19.4 per cent, during the decade 1900 to 1910, and the proportion of whites in the total population increased from 48 per cent in 1900 to 56.6 per cent in 1910.

The Indian population decreased during the decade from 29,536 to 25,331, the decrease being 4,205, or 14.2 per cent. The proportion of Indians decreased from 46.4 to 39.4 per cent. The number of Chinese decreased from 3,116 to 1,209, the decrease being 1,907, or 61.2 per cent. The number of Japanese increased from 279 in 1900 to 913 in 1910, and the number of negroes from 168 to 209.

Table 5

¹ A minus sign (-) denotes decrease.
² The classification of the white population by nativity and parentage in 1900 was defective. (See page 1135.)
³ Includes 246 Filipinos, 35 Hawaiians, and 13 Koreans.

As shown by Table 6, the white population was one-half (50.6 per cent) native and one-half (49.4 per cent) foreign born. The Indian population was almost entirely native, the percentage native being 98.3. Of the Chinese, 11.7 per cent were natives; of the Japanese, 2 per cent; and of the negroes, 80.4 per cent.

reporting one parent native of the United States and one foreign born were classified as of mixed parentage even though both parents were of the same race. The proportion of mixed parentage was naturally very small among the foreign born. Of the 18,426 native whites, 10,993, or 59.7 per cent, were of native parentage; 4,760, or 25.8 per cent, were of foreign parentage; and 2,673, or 14.5 per cent, were of mixed parentage. Of this latter class, 1,761 reported foreign-born fathers and 912 foreign-born mothers. There were 374 native Indians, who reported both parents foreign born, and 1,190 who reported one parent foreign born and one native.

Indian population.—Data relating to the Indian population, as returned at the last four censuses, are summarized in Table 8. In 1880 the Indians numbered 32,996 and constituted 98.7 per cent of the total population. During the decade 1880-1890, according to the returns, the Indian population decreased 7,642, or 23.2 per cent, and during the following decade increased 4,182, or 16.5 per cent. It should be noted, however, that the figure for 1890 is probably an understatement of the number of Indians in the territory at that time, since for large portions of the interior no enumeration was made. The figure for 1880, although to some extent based upon estimates, is probably nearly accurate. It is apparent from the table that since 1880 the Indian population has considerably decreased, the decrease for the 30 years 1880-1910 amounting to 7,665, or 23.2 per cent. The decrease in the proportion of Indians in the total population was greatest between 1890 and 1900, which is, of course, explained by the influx of whites in the years 1898 and 1899. The proportion of Indians of mixed blood is shown to have increased from 8.5 per cent of the Indian population in 1900, to 15.3 per cent in 1910. A more detailed classification of the data for the Indians of mixed blood in 1910 develops the fact that 3,843, or 98.9 per cent, were of white and Indian blood, 43, or 1.1 per cent, of Asiatic and Indian blood, and 1 of unknown mixture.

¹ Includes those of unknown age.
² Includes 21 males 51 years of age and over, as follows: 9 Aleut, 5 Southern Eskimauan, 2 Sitka, 2 Tlingit (tribe not reported), and 3 Tsimshian.
³ Includes 17 females 51 years of age and over, as follows: 1 Athapascan (tribe not reported), 6 Aleut, 1 Southern Eskimauan, 1 Haida, 1 Auk, 1 Chilkat, 1 Kake, 1 Stikine, and 4 Tlingit (tribe not reported).
⁴ Exclusive of 1,640 Indians not reported by stock or tribe, but inclusive of 88 Indians of Alaskan stock enumerated in the United States, as follows: 40 Aleut; 16 Eskimauan; 32 Tlingit.
⁵ Includes Aglemiut, Chugachigmiut, Kaniagmiut, and Ugalakmiut.

Sex.—In the total population in 1910, as shown by Table 10, there were 45,857 males and 18,499 females, the number of males to 100 females being 247.9. In 1900 the ratio was 258.9 to 100. The number of males to 100 females in the white population in 1910 was 500.1; in the Indian population, 105.3. Among native whites it was 317.8; among foreign-born whites, 985.4; among native whites of native parentage, 344. The high proportion of males in the native white population is accounted for by the fact that a large proportion of this element was composed of male immigrants from other sections of the United States. The Indian population presented a fairly normal distribution by sex, the number of males to 100 females being, however, somewhat higher than the corresponding number (103.5) for Indians in the United States.

¹ The classification of the white population by nativity and parentage in 1900 was defective. (See page 1135.)

² Ratio not shown, the number of females being less than 100.

AGE DISTRIBUTION AND MARITAL CONDITION.

Age.—The age distribution of the color or race, nativity, and parentage elements, by sex, is given by five-year periods in Table 11, single years being shown for the population under 25. Except among the Indians, the proportion of children in each class of the population was low, and was lower for males than for females. The age distribution as well as the sex distribution thus reflects the immigrant character of the population, the proportion of immigrants being very large in these classes and greater among males than among females. Among native whites of native parentage 7.5 per cent of the males were under 15 years of age, and 24.1 per cent of the females; for native whites of foreign or mixed parentage, the corresponding percentages were 11.5 and 34.9, respectively; and for foreign-born whites, 0.5 and 5.4. The age distribution of the Indians was more normal, the percentage under 15 being 37.8 for males and 37.6 for females. Of the native whites of native parentage 60.8 per cent were 20 to 44 years of age; of the foreign-born whites, 77.4 per cent; of the Indians, 37 per cent. The percentage 45 and over for these classes was 21, 20.3, and 14.7, respectively. In the Indian population 16.1 per cent of the males and 16.5 per cent of the females were under 5 years of age, these percentages being somewhat above the corresponding percentages—14.9 and 15.5—for the Indian population in the United States proper.

In Table 12 the distribution by broad age periods of the Alaskan population in 1910 and 1900 is shown for the principal nativity and color elements. In 1900, 16,911, or 26.6 per cent, of the total population were returned as of unknown age. The proportion returned as of unknown age among the native whites of native parentage amounted to 58.3 per cent of this class, the proportion being even greater among the Chinese. For these classes especially, and for the total population in a lesser degree, the large proportion of unknown age in 1900 seriously invalidates any comparison of the 1900 with the 1910 data, either of absolute numbers or of percentages in each age group. When, as is the case with the 1900 data, the number for whom age is unknown is relatively very large, the number reported in the several age groups, and consequently the percentages for the several groups, are necessarily much smaller than they would be if the returns by age were complete. While, for example, it is probably true that the proportion of native whites of native parentage under 5 years of age was greater in 1910 than it was in 1900, the table does not enable one to measure the change. If it be assumed that those of unknown age in 1900 were in fact distributed by age in the same proportion as were those of known age, the proportion under 5 in this class would be for that year 3.9 instead of 1.6 as shown in the table.

¹ The classification of the white population by nativity and parentage in 1900 was defective. (See page 1135.)

² Less than one-tenth of 1 per cent.

In Table 13 a special classification of the Indian population of full blood and of mixed blood is given by broad age groups, comparable figures for Indians living in the United States being included. Among Indians of full blood, the proportion under 20 years of age was in 1910 very nearly the same in Alaska as it was in the United States, the percentages being 43.8 and 44.9, respectively. The percentage 20 to 50 years of age, inclusive, was higher, and the percentage 51 and over lower among Indians of full blood in Alaska than it was in the United States. Both in Alaska and in the United States the proportion under 20 was greater for Indians of mixed blood than it was for those of full blood. The percentage under 20 was higher among Indians of mixed blood in Alaska than it was in the United States—69.8 per cent as compared with 62.8 per cent. It was to be expected that a very large proportion of the Alaskan Indians of mixed blood should be in the younger age periods, since intermarriage with other races to any considerable extent has been possible for Alaskan Indians only within comparatively recent years.

¹ Exclusive of outlying possessions.

The sex distribution and number of males to 100 females is given by broad age groups for Alaskan Indians of pure and of mixed descent in Table 14. Among the full-blood Indians, males outnumbered females in each age group. Indians of mixed blood under 20 were very nearly evenly divided by sex, but there was a slight excess of males among those 20 to 50 years of age, inclusive.

¹ Ratio not shown, the number of females being less than 100.

Marital condition.—The statistics of marital condition for 1910 are given in Table 15 by color or race and nativity, sex, and age periods. In the white population 15 years of age and over, 70.6 per cent of the males were single and 19.9 per cent of the females. The percentage married in this class was 22.5 for males and 69.4 for females; the percentage widowed, 3.8 and 6.9, respectively. The number reported as divorced, comprising 455 males and 157 females, is believed to be too small, because of the probability that some divorced persons class themselves as single or widowed. Among native whites of native parentage 15 years of age and over, the percentage married was 26.5 for males and 68.9 for females; among native whites of foreign or mixed parentage, 23.2 and 69.2, respectively; and among foreign-born whites, 20.3 and 70; the percentage for females in each of these classes being decidedly higher than that for males. In explanation may be noted the great excess of males over females in the adult white population of each class. Among whites 15 to 19 years of age the percentage married was 16.8 for females and 1.3 for males; among those 20 to 24, the percentage was 60.8 for females and 4 for males; among those 25 to 34, 76.6 and 17.5, respectively. The disparity in the percentages was very marked also in each of the older age groups. In the Alaskan population 55 years of age and over, 53.7 per cent, or more than one-half of the females were widowed, and 18 per cent of the males. In each of the

principal classes, as in the population as a whole, the percentage widowed for females exceeded that for males. In the white population the excess of males is a condition which might tend to make the proportion widowed as well as the proportion married lower for males than for females, even on the assumption that the marriage relationship is as often broken by death of the wife as by death of the husband. It is, however, undoubtedly true, since husbands are generally older than their wives, that the marriage relationship is more often broken by death of the husband than by death of the wife. Even in a population normally distributed by age and sex, therefore, the percentage widowed for

females generally exceeds that for males. Other things being equal the actual proportion widowed in any class is of course largely determined by the age composition of the class, tending to be relatively high where the proportion past middle life is relatively high.

In the Indian population 15 years of age and over, 62.2 per cent of the males and 72.6 per cent of the females were married. Of the 1,206 Chinese males 15 years of age and over 47.1, or 39.1 per cent, were married, and of the 883 Japanese males 145, or 16.4 per cent. There were in the population 15 years of age and over only 2 Chinese and 25 Japanese females.

MARITAL CONDITION OF THE POPULATION: 1910.

[Per cent not shown where base is less than 100.]

1 Less than one-tenth of 1 per cent.

POPULATION—ALASKA.

The 1900 figures relating to marital condition are compared with those for 1910 in Table 16. In 1900 the marital condition of 63.8 per cent, or nearly two-thirds of the native white males of native parentage 15 years of age and over, was reported as unknown, the corresponding percentage in 1910 being only 4.2. This largely accounts for the fact shown in the table that among the males of this class the percentage reported as single increased from 23.8 in 1900 to 62 in 1910, and at the same time the percentage reported as married, widowed, and divorced increased from 12.4 to 33.7. These percentages do not, of course, represent an actual change in the marital condition of the male population. Of the Chinese males 15 years of age and over, 71.4 per cent in 1900 and 4.6 per cent in 1910 were returned as of unknown marital

condition. The percentage of unknown marital condition for native whites of foreign or mixed parentage was 2.1 in 1900 and 0.7 in 1910; for the foreign-born whites 3.7 and 0.5, respectively; and for the Indians 1.9 and 1. In explanation of the large percentage of unknown marital condition for whites of native parentage in 1900, it may be noted that whites of unknown marital condition for whom no specific information as regards parentage or nativity was obtained in 1900 were generally classified as native of native parentage. Among the foreign-born whites—who in 1910 constituted the largest single class shown in the table—the percentage married, both for males and females, was slightly lower in 1910 than it was in 1900; among Indians the percentage married was higher for each sex in 1910 than it was in 1900.

¹The classification of the white population by nativity and parentage in 1900 was defective. (See page 1135.)

²Less than one-tenth of 1 per cent.

In Table 17 the percentage married, by sex, for each of the principal classes in Alaska and in the United States is compared. The differences in the percentages for the two areas are largely accounted for by differences in the age and sex composition of the groups.

In the Alaskan population, except among the Indians, the sex composition is so abnormal, and varies to such an extent from class to class, that the percentage married is not generally significant of class tendency as regards marriage under normal conditions. In each of the principal classes, the percentage married for females was higher in Alaska than it was in the United States, and in each class except the Indians the percentage married for males was lower in Alaska.

PLACE OF BIRTH AND YEAR OF IMMIGRATION.

State of birth.—Table 18 shows for 1910 and 1900 the distribution of the native population according to state of birth. Of the total native population in 1910, which includes native whites, native Indians, and natives of other racial elements, 60.6 per cent were born in Alaska, 38.1 per cent were born in the United States proper, and 1.3 per cent in the Philippine Islands and other outlying territory of the United States. California contributed 3.7 per cent of the native population of Alaska. In 1900 the percentage born in Alaska (58.3) was somewhat lower, and the percentage born in the United States (41.6) somewhat higher than in 1910.

¹ Includes persons born in the United States, state not reported.
² Less than one-tenth of 1 per cent.
³ Includes persons born in Porto Rico, Hawaii, and Guam, at sea under United States flag, and American citizens born abroad.

Country of origin.—Table 19 shows for 1910 and for 1900 the distribution, by country of birth, of white persons of foreign birth, and for 1910 the distribution, by country of birth of parents, of native whites having both parents foreign born.

According to Table 19, in 1910 there were enumerated in Alaska 22,734 whites, who were either foreign born or native born of foreign parentage (that is, having both parents foreign born). Of the 17,974 foreign-born whites, 15.1 per cent were born in Sweden; 14.4 per cent in Norway; 12.3 per cent in Canada; 8.6 per cent in Germany; 6.4 per cent in Ireland; 5.7 per cent in England; and 37.4 per cent in other countries. In

1900, as in 1910, Sweden, Norway, Canada, and Germany were the countries most largely represented in the foreign-born white population of Alaska. In 1910 there were in Alaska, in addition to the foreign-born whites shown in Table 19, 2,461 foreign-born colored inhabitants, of whom 1,057 were born in China, 897 in Japan, 418 in Canada, and 89 in other countries. Of the 4,760 native whites having both parents foreign born, 944 were of mixed foreign parentage (that is, having father born in one foreign country and mother in another), 937 reported both parents born in Ireland, 931 reported both parents born in Germany, and 1,948 reported some other country as the place of birth of both parents.

¹ Data not available; included with "All other countries."
² Includes native whites whose parents were born in different foreign countries; for example, one parent in Ireland and the other in Scotland.

Year of immigration of the foreign born.—The year of immigration refers to the calendar year of immigration to the United States or to some one of its outlying possessions, not necessarily to the year of immigration to Alaska. As shown by Table 20, there were among the 17,974 foreign-born whites enumerated in Alaska in 1910, 7,218 who reported as the date of their immigration to the United States a year subsequent to 1900 and 10,063 who reported 1900 or some earlier year. Of the 895 foreign-born Japanese, 491 had immigrated subsequently to 1900. Only 40 of the 1,067 foreign-born Chinese, 14 of the 441 foreign-born Indians, and 14 of the 41 foreign-born negroes had come into the country subsequently to 1900.

MALES OF VOTING AND MILITIA AGES.

Voting and militia ages.—The number of males of voting and militia ages is given by principal classes for 1910 and 1900 in Table 21. Males of voting age in 1910 numbered 36,901. Of these males 7,567, or 20.5 per cent, were native whites of native parentage, 4,601, or 12.5 per cent, were native whites of foreign or mixed parentage, and 15,862, or 43 per cent, were foreign-born whites. The aggregate for white males 21 years of age and over was, therefore, 28,030, or 76 per cent of all males of voting age; in 1900 the corresponding percentage was 68.4.

In 1910 there were 6,513 Indian males 21 and over; 1,176 Chinese; and 1,182 of other races. The percentage of Indians among males of voting age decreased from 22.5 in 1900 to 17.6 in 1910; of Chinese, from 8.2 to 3.2. Males of militia age—those from 18 to 44 years, inclusive—numbered 28,621, of whom 21,714, or 75.9 per cent, were whites, 5,275, or 18.4 per cent, were Indians, and 1,632, or 5.7 per cent, were of other classes.

Citizenship.—Of the 15,862 foreign-born white males of voting age in Alaska in 1910, as shown by Table 22, 6,390, or 40.3 per cent, were naturalized; 4,068, or 25.6 per cent, had taken out first papers; 4,716, or 29.7 per cent, were aliens; and for 688 the status as to citizenship was not reported.

SCHOOL ATTENDANCE, ILLITERACY, AND INABILITY TO SPEAK ENGLISH.

School attendance.—The statistics of school attendance for 1910 are based upon the answers to the inquiry as to whether the person enumerated had attended school at any time during the year 1909. Table 23 gives the number and proportion of persons attending school, as shown by the census of 1910. There were enumerated in 1910, 10,615 persons of school age—that is, 6 to 20 years, inclusive—of whom 4,466, or 42.1 per cent, had attended school at some time during the year 1909; in the same period also 218 children under 6 and 179 persons 21 and over had attended school. Among native whites of school age the percentage of school attendance was 54.3 for males and 68.5 for females; among foreign-born whites it was 13.1 and 52, respectively; and among Indians 41.7 and 36.9. In the white and in the Indian population

the percentage of school attendance for males did not differ materially from that for females for the ages 6 to 9 and 10 to 14; among whites 15 to 20 years, however, the percentage for females was higher than that for males, 38 as compared with 16.8, while in the Indian population of that age the percentage for females was lower than that for males, 18.6 as compared with 28.8. The number of children 6 to 9 and 10 to 14 among the foreign-born whites was too small to provide an adequate basis for percentages. The detail regarding school attendance by single years of age for the ages 6 to 20, as returned at the census of 1910, is given in Table 24. In the school population of Alaska the highest percentage of attendance was for the age 11 years, which is the age of maximum attendance also for the white and for the Indian elements.

POPULATION—ALASKA.

For purposes of comparison with 1900 the returns for 1910 are summarized in Table 25 for the ages 5 to 20 years. The figures for 1900 represent the number for whom the length of school attendance during the year preceding June 1, or as near as possible, was reported. Among native white males 5 to 20 years of age the percentage of school attendance increased from 37.9 in 1900 to 51.6 in 1910; among native white females it increased from 50.2 to 65. In the Indian

population of that age the percentage for males rose from 20.1 to 39.7; that for females from 17.5 to 34.9.

The decrease in the percentage of school attendance for the foreign-born whites as a class—from 26.4 in 1900 to 20.6 in 1910—is mainly accounted for by changes in the age composition of that class. The great majority of the foreign-born whites of school age were in the age group 15 to 20, in which, as compared with the younger age groups, the proportion of school attend-

POPULATION—ALASKA.

ance was small. The relative importance of this age group was considerably greater in 1910 than in 1900 and the effect upon the total was a reduction in the

percentage of school attendance. Taking the age group 15 to 20 by itself, the percentage of school attendance increased from 3 in 1900 to 6.4 in 1910.

In Table 26 corresponding percentages of school attendance among the white classes and among the Indians are given for Alaska and for the United States. In the white population 10 to 14 years of age, the percentage attending school was slightly higher in Alaska than in the United States, 92.8 as compared with 91.1.

Illiteracy.—The Census Bureau classifies as illiterate any person 10 years of age and over who is unable to write, regardless of ability to read. Table 27 gives for 1910 and 1900 the number and percentage of illiterates among the population 10 years of age and over. In the population of Alaska in 1910 there were 14,550 illiterates—that is, persons 10 years of age and over who were unable to write—constituting 26.5 per cent of the total population of that age. In 1900 the percentage of illiteracy was 41.6. For native whites of native parentage the percentage in 1910 was 0.9; for native whites of foreign or mixed parentage, 0.4; for foreign-born whites, 6.9; for Indians, 71.4; for Chinese, 15.5; for Japanese, 6.8; for negroes, 10.3.

Among males the percentage of illiterates in 1910 was 19.1; among females, 48.2. These percentages do not, however, indicate even approximately the relative illiteracy of males and females in the several classes of the population. Although the percentage

Table 26

CLASS OF POPULATION.	PERCENTAGE ATTENDING SCHOOL IN THE POPULATION OF SPECIFIED AGE: 1910							
	6 to 20 years.		6 to 9 years.		10 to 14 years.		15 to 20 years.	
	Alaska.	United States. ¹	Alaska.	United States. ¹	Alaska.	United States. ¹	Alaska.	United States. ¹
White.....	52.6	64.5	75.2	77.2	92.8	91.1	23.0	33.7
Native white.....	60.7	66.2	75.6	77.2	93.2	91.3	30.7	36.2
Native parentage.....	53.4	66.9	72.9	75.2	92.4	90.7	30.2	39.5

¹ Exclusive of all outlying possessions.
² Per cent not shown where base is less than 100.

for females was higher than that for males in the Indian population, 75.1 as compared with 67.9, the difference was not marked, while among whites the percentage for females was lower than that for males, 2 as compared with 4.2. The disparity in the percentages by sex in the total population is occasioned mainly by the disparity in the proportion of Indians among males and females, respectively. The proportion of Indians—whose percentage of illiteracy is very high—was 63.1 per cent among females 10 years of age and over, and was only 22.6 per cent among males of that age.

In the white population 10 to 14 years of age the percentage of illiteracy in 1910 was 0.6; among whites

15 to 19 it was 4.3. Among Indians 10 to 14 it was 33.3 and among those 15 to 19 it was 50.7. The percentage of illiteracy in the Indian population increases from age period to age period, more than nine-tenths of the Indians 45 and over being returned as illiterate. Illiteracy among Indians, however, decreased during the decade for each age and sex group shown in Table 27, the decrease naturally being most marked in the younger age periods. Among Indian boys of 10 to 14 years, the percentage decreased from 68.5 in 1900 to 33 in 1910, and among Indian girls of that age, from 66.9 to 33.6. The decrease was marked also among Indians of both sexes aged 15 to 19 and 20 to 24 years.

ILLITERATES IN THE POPULATION 10 YEARS OF AGE AND OVER: 1910 AND 1900.

In Table 28 the percentage of illiteracy in each of the principal elements of the Alaskan population in 1910 may be compared with the corresponding percentage for the same population element in the United States. For each class except the Indians the percentage of illiteracy was lower in the Alaskan population than it was in the United States. In the Alaskan population, however, the large proportion of Indians, among whom the percentage of illiteracy is very high, raises the percentage for the population as a whole above that for the total population in the United States.

Table 28

All other.....	21.2	39.9

¹ Exclusive of outlying possessions.

Inability to speak English.—Table 29 shows for each of the principal classes of the population the number reported in 1910 as unable to speak English and the proportion which this number represented of the total.

In the population 10 years of age and over in 1910 there were 12,674 persons who were unable to speak English; of these, 10,212 were Indians, 1,212 foreign-born whites, 746 Chinese, 273 Japanese, and 231 of other classes. The non-English speaking element constituted 61.8 per cent of the Chinese population 10 years of age and over, 56.6 per cent of the Indian population, 30 per cent of the Japanese, 6.8 per cent of the foreign-born white, and 0.5 per cent of the native white.

DWELLINGS AND FAMILIES.

In census usage a "dwelling" is any building or structure in which one or more persons reside. The term "family" as here used means a household or group of persons, whether related by blood or not, who share a common abode, and also any person living entirely alone. As shown by Table 30, the number of dwellings in Alaska in 1910 was 16,612 and the number of families 17,809, the number of families to 100 dwellings being 107.2. The average number of persons per dwelling was 3.9, and the average num-

ber per family 3.6. In 1900 the average number of families to 100 dwellings was 127.4, the average number of persons per dwelling 6, and the average number of persons per family 4.7.
