STATISTICS FOR HAWAII.

NUMBER OF INHABITANTS AND COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Prepared under the supervision of WM. C. HUNT, Chief Statistician for Population.

INTRODUCTION.

The territory of Hawaii has been included within the area of enumeration by the acts of Congress providing for the last two Federal censuses. The peculiar conditions prevailing in this insular territory necessitate a special adaptation of census methods, literature, and schedules, and in addition the remoteness of the territory from the mainland, as well as the remoteness of the several inhabited islands from one another and the infrequency of interisland communication, tend to complicate the organization and supervision of the field work. In certain sections it is difficult to find competent persons who can be induced to undertake this work by the offer of temporary employment at a comparatively low rate of remuneration. Moreover, among certain classes of the population, which for very considerable areas is predominantly Asiatic and non-English speaking, census taking has been popularly regarded with suspicion in the past, and in certain localities enumerators have even encountered violent opposition. Preliminary to the actual enumeration in 1910 it was therefore necessary to prepare and disseminate a considerable amount of literature explaining in oriental and in other languages the purposes and methods of the census. Lessons upon the schedules were given in the public schools, instructions and schedules were translated into Chinese, Japanese, and

other languages, and agents were specially trained in advance to supervise the actual work of enumeration. Every effort was made to select and train for this work in each district individuals entirely familiar with the local conditions within the districts to which they were to be severally assigned and able to speak the language prevailing therein. Wherever necessary, interpreters were employed to assist the enumerators. As a result of this preliminary work, it is believed that the Thirteenth Census was an accurate and complete enumeration of the population.

The tables interspersed throughout the text present for the territory statistics relating to number of inhabitants, increase and density of population, proportions urban and rural, race, nativity, parentage, sex, age, marital condition, place of birth, males of voting and militia ages, citizenship, year of immigration of the foreign born, school attendance, illiteracy, inability to speak English, and number of dwellings and families. All topics covered by the Thirteenth Census are included except occupations and ownership of homes. In the general table (Table 30) on pages 26-28 statistics as to the number, increase, density, and composition and characteristics of the population are given by counties and for Hilo and Honolulu separately.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the territory.—The population of Hawaii in 1910 was 191,909. Compared with a population of 154,001 in 1900, this represents an increase during the decade of 37,908, or 24.6 per cent.

The first census of the Hawaiian Islands was taken in 1832, and was followed by censuses in 1836, 1850, 1853, and 1860. These censuses were very simple and rudimentary in character. A census taken at

HISTORICAL NOTE.—The territory of Hawaii is an archipelago of nine inhabited islands, Hawaii, Maui, Oahu, Kauai, Molokai, Lanai, Niihau, Kahoolawe, and Midway, besides a number of small uninhabited islands. The island first named is the largest, and was formerly the most important, and has thus given its name to the archipelago and to the territory.

It is probable that the first white men to reach the archipelago were the survivors of the crews of two Spanish vessels which were wrecked on the coast of one of the islands about the year 1527. Juan Gaetano, a Spanish navigator, seems to have visited the islands in 1542 or 1555. In 1778 they were definitely discovered by the English navigator, Capt. James Cook.

At the time of Cook's visit, the archipelago seems to have been divided into three distinct kingdoms, as follows: (1) Hawaii; (2) Oahu and Maui; and (3) Lanai and Molokai. On the death of the King of Hawaii in 1782 a period of civil war followed, which was brought to a close in 1791, when Kamehameha, the leader of one of the parties, had his rival assassinated. In 1795 he succeeded in establishing his sovereignty over the entire archipelago and founded a dynasty which governed the Hawaiian Islands until 1872.

Idolatry was overthrown by the King in 1819, and in the following year American missionaries began the work of educating the natives. In 1839 the King granted civil rights to the people and in 1840 promulgated a constitution. In 1846 the

hitherto prevailing system of feudalism was abolished by the Land Act, under which the crown lands were yielded up and provision was made for the people to become owners of the soil.

About 1840 French and British officers attempted to gain a foothold in the islands, but their acts were disowned by their respective governments. In 1842 the independence of the islands was recognized by the United States and two years later by France and Great Britain.

The dynasty established by Kamehameha I became extinct with the death of Kamehameha V in December, 1872, whereupon the legislature elected as king Lunalilo, who had received the unanimous nomination of the people. He died childless about a year later, and the legislature again elected a king, Kalakaua, who reigned until his death in January, 1891, when his sister, Liliuokalani, became queen. Her governmental policies were distasteful to the progressive element of the population, and in January, 1893, she was dethroned and a provisional government established. Negotiations for annexation to the United States were begun, but proved unsuccessful, whereupon the Republic of Hawaii was organized in July, 1894. Negotiations for annexation were renewed in 1897, and in August of the next year the archipelago passed into the possession of the United States. In June, 1900, the territory of Hawaii was organized, with its capital at Honolulu.

STATISTICS FOR HAWAII.

regular periods was not provided for until 1865, when the legislative assembly made it "the duty of the board of education, every sixth year, counting from the year 1860, to make a complete census of the inhabitants of the Kingdom, to be laid before the King and legislature for their consideration." Under the terms of this requirement a census of the Hawaiian Islands was taken every six years from 1866 to 1896, inclusive. The censuses of 1900 and 1910 were taken under the acts of Congress providing for the Twelfth and Thirteenth Federal Censuses, respectively.

The census of Hawaii in 1910 was taken as of April 15, the date of the census in the United States. The censuses from 1866 to 1900, inclusive, were taken as of different dates, as follows: 1866, December 7; 1872,

December 27; 1878, December 27; 1884, December 27; 1890, December 28; 1896, September 27; and 1900, June 1. No information is available concerning the corresponding dates for the censuses prior to 1866.

The population of Hawaii at each census from 1832 to 1910, inclusive, was as follows: 1832, 130,313; 1836, 108,579; 1850, 84,165; 1853, 73,138; 1860, 69,800; 1866, 62,959; 1872, 56,897; 1878, 57,985; 1884, 80,578; 1890, 89,990; 1896, 109,020; 1900, 154,001; and 1910, 191,909.

The following table shows the population of Hawaii at the Federal censuses of 1910 and 1900, and at the census of 1890, taken under the direction of the Hawaiian Government, together with the increase and percentage of increase during the two decades.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.	
		Number.	Per cent.
1910.....	191,909	37,908	24.6
1900.....	154,001	64,011	71.1
1890 ¹	89,990		

¹ Figures derived from the census taken as of December 28, 1890, under the direction of the Hawaiian Government.

During the decade 1890-1900 the growth of Hawaii was very rapid, its population in 1900 being over one and two-thirds times as great as in 1890, while during the last decade, 1900-1910, the growth was slower, the absolute increase being less than three-fifths and the percentage increase not much over one-third as great as in the preceding decade.

Counties.—In 1910 the territory of Hawaii was divided into five counties. The population of these counties ranged from 785 in Kalawao County to 82,028 in Honolulu County. Prior to 1905 the territory was not divided into counties, but a comparison of the total population in 1910 of each county with the population in 1900 of the corresponding areas shows for four counties an increase in population during the last decade. The rates of increase ranged from 11.3 per cent in Maui County to 40.2 per cent in Honolulu County, and the absolute increases from 3,019 in Maui County to 23,524 in Honolulu County. The population of Kalawao County in 1910, namely, 785, compared with the population of the same territory in 1900, shows a decrease of 392, or 33.3 per cent. (See Table 30, on page 26, and the first map on page 8.)

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." Of these minor civil divisions those which rank next to the county as political units are termed primary divisions; these in turn may be divided into smaller political units referred to as secondary divisions.

Table 2 shows the population of Hawaii in 1910, distributed according to counties and minor civil divisions, and, so far as possible, in comparison with the population in 1900 and 1890. The arrangement of counties and of the primary divisions in each county is alphabetical. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. County totals for Hawaii and Maui as they are given in Table 2 for 1900 and 1890 somewhat exceed the aggregate population of the minor civil divisions constituting the counties as shown in the table. In Hawaii County this is due to territorial changes that have been made in the minor civil divisions of the county since 1900. In Maui County the population of two islands included in the county was returned by districts in 1910 but was not so returned in 1890.

In Hawaii the counties are divided into 27 primary divisions, comprising 26 election districts (which are also administrative and judicial divisions) and 1 island. There is also 1 secondary division, Hilo town, which is formed from parts of North and South Hilo districts in which it is located. In 1910 this town had a population of 6,745. Honolulu district, in the island of Oahu, is to all intents and purposes a city. In 1890 it had a population of 22,907. During the following decade, 1890-1900, the population increased to 39,306, a growth of 16,399, or 71.6 per cent; while during the last decade, 1900-1910, the growth of the city, though substantial, was slower, the population in 1910 being 52,183, an increase of 12,877, or 32.8 per cent.

POPULATION.

POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890.

[District means election district. The figures given for 1890 are derived from the census taken as of December 28, 1890, under the direction of the Hawaiian Government.]

¹ Organized from Hawaii Island in 1905.
² County totals include population (19,785 in 1900; 9,935 in 1890) of Hilo district, taken to form North and South Hilo districts since 1900.
³ Organized from part of Hilo district in 1909.
⁴ Organized as Oahu County from Oahu Island in 1905; name changed to "City and County of Honolulu" in 1907.
⁵ Generally considered as Honolulu city.
⁶ Organized from part of Molokai Island in 1905.
⁷ Population of that part of Molokai Island in Kalawao County.

⁸ Not returned separately.
⁹ Organized from Kauai and Niihau Islands in 1905.
¹⁰ Organized from Kahoolawe, Lanai, and Maui Islands and part of Molokai Island in 1905.
¹¹ County total includes population (2,826) of Molokai and Lanai Islands, not returned separately in 1890.
¹² Exclusive of population of Lanai Island.
¹³ Population of territory now constituting Molokai district.

Islands.—Table 3 shows the population of Hawaii, by islands, for 1910, with comparative figures where available for 1900 and 1890. A substantial increase in population during the last decade is shown for the

four larger islands. The small island of Molokai shows a decrease of 713, or 28.5 per cent. Oahu Island, containing Honolulu city, shows the largest increase in population, namely, 23,489, or 40.1 per cent.

POPULATION OF ISLANDS: 1910, 1900, AND 1890.

Table 3	ISLAND.	1910	1900	1890	ISLAND.	1910	1900	1890

	Maui.....	28,623	25,416	17,357				

¹ Niihau Island returned with Kauai Island in 1890.

² Lanai Island returned with Molokai Island in 1890.

Density of population.—The total land area of the territory is 6,449 square miles. The average number of persons to the square mile in 1910 was 29.8; in 1900 and 1890 it was 23.9 and 14, respectively.

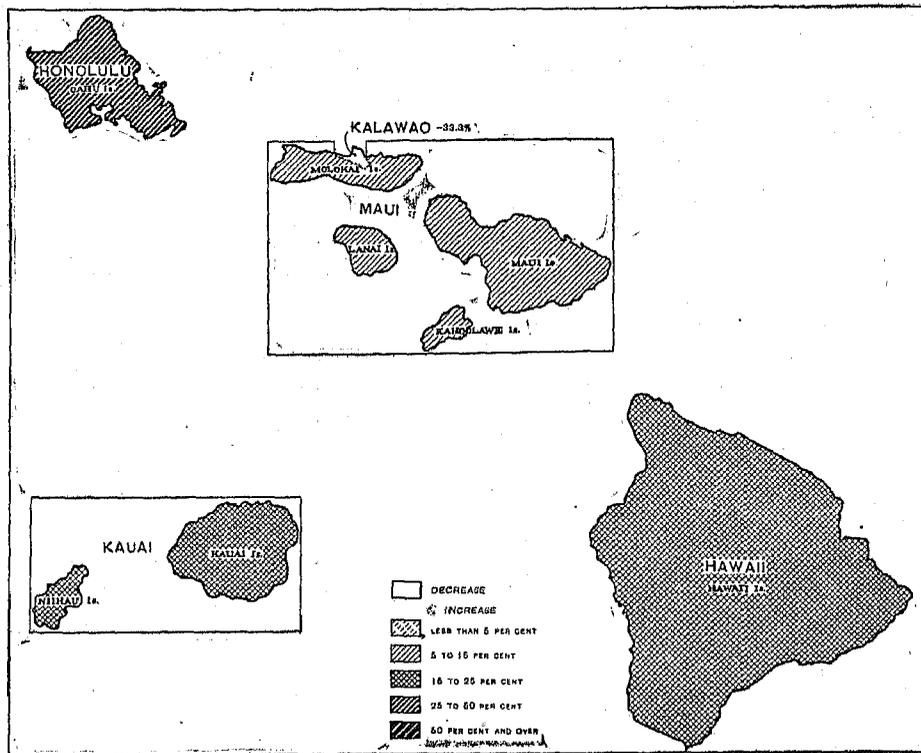

The density of population is given by counties in Table 30 and in the second map on page 8.

Hawaii County, with 4,015 square miles, has the largest area, and Kalawao County, with 11 square miles, the smallest area. Honolulu County, containing the city of Honolulu, has the highest density of any county, namely, 136.7 persons per square mile, while Hawaii County, with 13.8 persons per square mile, has the lowest density.

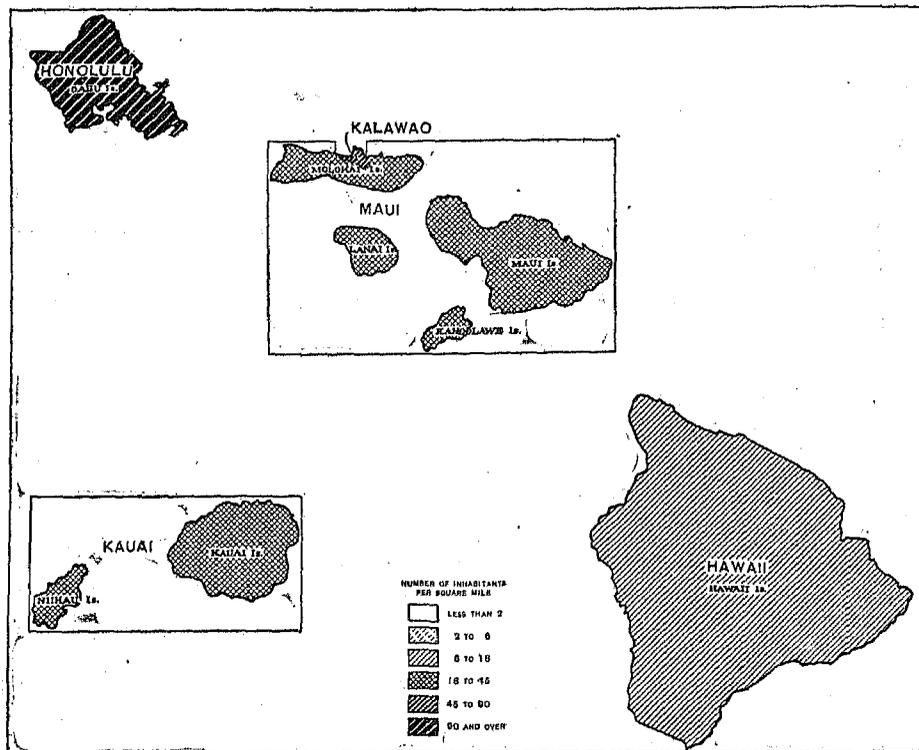

Urban and rural population.—The census definition of the terms urban and rural—namely, urban, as embracing the population of all incorporated places of 2,500 inhabitants or more, and rural, as embracing the population of smaller places and of country districts—does not provide a satisfactory basis of classification

when applied to the data for Hawaii. Although Honolulu district is, as previously noted, strictly an urban area, it is not incorporated as a city, and outside of this district no urban area except Hilo town can be defined within the minor civil divisions of the counties. If the population of these two areas be classified as urban, and the remainder of the population as rural, the aggregate urban population in 1910 was 58,928 and the aggregate rural population 132,981, the proportions urban and rural being, respectively, 30.7 and 69.3 per cent. As these aggregates are based upon a more or less arbitrary classification, the distinction between urban and rural population has not been generally made in tabulating the population data for Hawaii, although the two classes are distinguished in certain tables. To cover the urban element in the population, statistics are given in Table 30 for the district of Honolulu and for the town of Hilo in the same detail as for the counties.

PER CENT OF INCREASE OR DECREASE OF POPULATION OF HAWAII, BY COUNTIES: 1900-1910.

DENSITY OF POPULATION OF HAWAII, BY COUNTIES: 1910.

RACE, NATIVITY, PARENTAGE, AND SEX.

Race.—The racial composition of the population of Hawaii is shown in detail for 1910 in Table 4, which gives also data for 1900 and 1890, as far as they were returned separately, together with the increase by race during each of the two decades 1890-1900 and 1900-1910.

Racially the population of the territory is extremely heterogeneous. In 1910 the pure Caucasian element numbered 44,048, constituting 23 per cent, or a little over one-fifth, of the total population. Of this class, which is itself composed of diverse racial elements, 22,301, or slightly more than one-half, were Portuguese, 4,890 were Porto Rican, 1,990 were Spanish, and 14,867 were of other Caucasian descent. The Japanese, numbering 79,675, constituted 41.5 per cent, or more than two-fifths, of the total population, while the Chinese, Japanese, Chinese, and Koreans combined numbered 105,882,

or 55.2 per cent, of the total population. Persons of pure native Hawaiian stock numbered 26,041 and constituted 13.6 per cent of the population. There were 12,506 part Hawaiians, of whom 8,772 were of Caucasian-Hawaiian and 3,734 of Asiatic-Hawaiian descent. Persons of other races, comprising 2,361 Filipinos, 695 negroes, and 376 included under the head of "all other," numbered in the aggregate 3,432 and constituted 1.8 per cent of the population. The race classification of Table 4 does not segregate from the "other Caucasian" group either the American element or the several European and other nationalities which are more or less distinct racially. The native American element is shown in the classification by state of birth (Table 16), and the nationality of the foreign born is the basis of the classification by country of birth (Table 17).

RACE.	NUMBER.			INCREASE. ¹				PER CENT OF TOTAL POPULATION.		
	1910	1900	1890	Number.		Per cent.		1910	1900	1890
				1900-1910	1890-1900	1900-1910	1890-1900

Caucasian.....	44,048	28,810	18,939	15,229	9,880	52.8	52.2	23.0	18.7	21.0
Portuguese.....	22,301							11.6		
Porto Rican.....	4,890							2.5		
Spanish.....	1,990							1.0		
Other Caucasian.....	14,867							7.7		
Chinese.....	21,674	25,707	29,362	-4,033	57,516	-15.9	195.9	11.3	16.7	32.6
Japanese.....	79,675	61,111								
Korean.....	4,533			18,564		30.4		41.5	39.7	
Filipino.....	2,361			4,533				2.4		
Negro.....	695	233		2,361				1.2		
All other.....	376	415	1,067	462	233	108.3		0.4	0.2	
				-39	-652	-9.4	-61.1	0.2	0.3	1.2

¹ A minus sign (-) denotes decrease.

² Includes 15,301 foreign-born Chinese, 12,360 foreign-born Japanese, and 1,701 Hawaiian-born Chinese and Japanese not returned separately.

In the decade 1900-1910 the number of Caucasians in the population increased 15,229, or 52.8 per cent, the percentage of increase for this race being practically the same in this as in the preceding decade. The increase of the Japanese in the decade 1900-1910 was 18,564, or 30.4 per cent. In the same period the Chinese decreased 4,093, or 15.9 per cent.

The number of pure Hawaiians decreased from 34,436 in 1890 to 26,041 in 1910, the decrease in the decade 1900-1910 being somewhat less than that in the preceding decade—3,758, or 12.6 per cent, as compared with 4,637, or 13.5 per cent. In each of these decades, however, the number of part Hawaiians increased, from 6,186 in 1890 to 7,857 in 1900, and to 12,506 in 1910, the increase in this element during the decade 1900-1910 being 4,649, or 59.2 per cent. The increase in the part Hawaiians should be taken into account in considering the decrease in the Hawaiians of pure stock. It is obvious that the intermarriage of pure Hawaiians with other

racers will tend to lower the rate of increase for Hawaiians of pure stock, since the children of such marriages will be classified as part Hawaiians.

As a consequence of the rapid increase of other population elements, and of their own decrease, the pure Hawaiian element constituted a much smaller proportion of the total population in 1910 than it did in 1900 or in 1890, the proportion being 13.6 per cent in 1910, as compared with 19.3 per cent in 1900 and 38.3 per cent in 1890. The proportion of Caucasians, which decreased from 21 per cent in 1890 to 18.7 per cent in 1900, had increased to 23 per cent in 1910. The proportion of Japanese did not change materially between 1900 and 1910, the percentage being 41.5 in 1910 as compared with 39.7 in 1900.

The number and proportion urban and rural in 1910 are shown by race in Table 5. Of the Japanese, who constitute the largest race group, 18.7 per cent lived either in Honolulu district or in Hilo town, the two areas classified as urban territory; of the Hawaiians,

STATISTICS FOR HAWAII.

the second largest group, one-third, or 33.3 per cent; of the Portuguese, very nearly the same proportion, 32.7 per cent; and of the Chinese, 46.2 per cent. The highest percentage urban, 66.4, is that for the "other Caucasian" element, that is, Caucasians exclusive of Portuguese, Porto Ricans, and Spaniards; the second highest percentage, 53, is that for the Caucasian Hawaiians.

Nativity by race.—Slightly more than one-half (98,157, or 51.1 per cent) of the population in 1910 was native, and slightly less than one-half (93,752, or 48.9 per cent) foreign born, as shown in Table 6. The native element embraces all persons born in Hawaii, or in any state or outlying possession of the United States. Persons born in Porto Rico or in the Philippine Islands, whether of Porto Rican, Filipino, or other racial origin, are accordingly classified as native. In 1910 the percentage native for Hawaiians, part Hawaiians, Porto Ricans, and Filipinos was, in fact, 100, since no individual in any of these race classes returned as place of birth a foreign country. For the Japanese the percentage native was 25; for the Chinese, 33.2; for the Portuguese, 61.7; and for the "other Caucasian" element, 66.7.

¹ Born in the United States or in any of its outlying possessions, including Hawaii.

Parentage, by race and nativity.—The parentage of the native and of the foreign born in each racial

element in the population of Hawaii is given for 1910 in Table 7. Of the 98,157 natives, less than one-half—47,347, or 48.2 per cent—reported both parents native; 41,387, or 42.2 per cent, reported both parents foreign born; and 9,423, or 9.6 per cent, reported one parent native and one foreign born. Of the 9,423 natives reporting one parent foreign born, 8,323 reported foreign-born fathers and only 1,100 foreign-born mothers. The large proportion with foreign-born fathers among the part Hawaiians of mixed native and foreign-born parentage may be noted as specifically indicative of the process by which the native Hawaiian stock is being merged with other races. Of the 4,485 Caucasian and Asiatic Hawaiians returned as having one parent native and one foreign born, 4,743 had foreign-born fathers and native mothers and only 102 foreign-born mothers and native fathers. The Chinese, Japanese, and Koreans, who were partly native and partly foreign born, with few exceptions even among the natives, reported both parents foreign born. Only 268, or slightly less than 1 per cent of the 27,446 natives in these three races, reported both parents native.

Sex.—In the population of the territory in 1910, as shown by Table 8, there were 123,099 males and 68,810 females, the number of males to 100 females being 178.9. In 1900 the ratio was 223.3 males to 100 females. Among Hawaiians the number of males to 100 females in 1910 was 106.6; among the Portuguese, 107.8; among the Chinese, 378.9; among the Japanese, 220.1; and among those classified as "other Caucasian," 164.9. In each race group for which 1900 data are given, the proportion of females increased during the decade 1900-1910.

AGE DISTRIBUTION AND MARITAL CONDITION.

Age.—Tables 10 and 11 give the age distribution of the population of Hawaii by race and sex. In Table 10 the distribution is by five-year periods, single years being shown for persons under 25; Table 11 gives the distribution and the sex ratio for specified periods.

Of the total population in 1910, 36.6 per cent were under 20 years of age. The proportion under 20, however, varied greatly in the different races. Of the Asiatic Hawaiians 70.9 per cent were under 20. The percentage was relatively high also among the Caucasian Hawaiians (63.8), the Portuguese (56.8), the Porto Ricans (48.6), and the Spaniards (58.6). It was relatively low among those classified as "other Caucasian" (29.3), the Chinese (28.9), the Japanese (28.3), and the Koreans (14.9), in which races the immigrant or foreign-born element is large. Among the pure Hawaiians the percentage under 20 was 39.9.

The movement of population to and from Hawaii accounts for certain peculiarities in the age distribution of different races. In the group "Filipino, negro, and all other" the number rises abruptly from 165 in the age group 10 to 14 years, to 1,106 in the group 15 to 19, and falls to 814 in the group 20 to 24 years. This is due to the immigration of many young Filipinos just above the age of school attendance to work on the plantations. On the other hand, among the Japanese it is customary to send children back to Japan to be reared and educated. During the five years immediately preceding the census enumeration, although the arrivals of Japanese adults exceeded the departures by over 1,100 per annum, the departures of Japanese children under 12 years of age exceeded the arrivals by nearly a thousand yearly. This movement must diminish appreciably the proportion of Japanese under 20 years of age, as compared with the proportion that would be found if the age distribu-

tion were determined naturally by births and deaths and were not affected by emigration and immigration.

In certain racial groups the age distribution of the males differed decidedly from that of the females. In each race, except among the part Hawaiians, a smaller proportion of the males than of the females were in the younger age periods. In the total population 29.9 per cent of the males and 48.7 per cent of the females were under 20 years of age. Among the Japanese 21.6 per cent of the males were under 20 and 42.7 per cent of the females; among the Chinese the corresponding percentages were 19.6 and 63.4. The disparity in the percentages was less among Caucasians, and was inconsiderable among pure Hawaiians.

Although a decidedly greater proportion of females than of males were under 20 years of age, the males outnumbered the females among those under 20 in each race except among the Asiatic Hawaiians. In the total population under 20 the number of males to 100 females was 109.7. In the population 20 years of age and over, however, the excess of males was much greater, the ratio being 222.7 males to 100 females among those aged 20 to 39, and 300.5 to 100 among those 40 and over. The excess of males was greatest among the Chinese, Japanese, and Koreans. Among Hawaiians, part Hawaiians (Asiatic and Caucasian), and persons of Spanish descent, females outnumbered males in the age group 20 to 39 years.

Of the population under 10 years of age, 55.8 per cent were under 5, the proportion being lowest among the Chinese, 46 per cent, and highest among the Porto Ricans, 65.5 per cent. Of the population under 5 years of age, 22.9 per cent were under 1, the proportion, which varied but little among the different races, being lowest among the Chinese, 20.5 per cent, and highest among the Asiatic Hawaiians, 25.2 per cent.

¹ Less than one-tenth of 1 per cent.

This table shows that the proportion of the population under 5 years of age was greater in 1910 than it was

in 1900, 12.5 per cent as compared with 9.8 per cent. The proportion 5 to 9, 10 to 14, and 15 to 19 years of age, also, as well as the proportion in each of the five-year periods from 35 to 59, was somewhat greater in 1910, while the proportion in each of the five-year periods from 20 to 34, and in certain age periods over 60, was smaller in 1910. In the aggregate the proportion under 20 years of age in 1900 was 29.5 per cent, as compared with 36.6 per cent in 1910; the proportion 20 to 34 years of age was 43.5 per cent in 1900, as compared with 32.4 per cent in 1910; and the proportion 35 and over was 26.5 per cent in 1900, as compared with 30.8 per cent in 1910.

Data regarding the distribution by age in the two census years, 1910 and 1900, are given for five racial groups and for consolidated age periods in Table 13. The distribution of the Hawaiians and of the part Hawaiians was very nearly the same in 1910 as in 1900. The distribution of the Caucasians in 1910, as compared with 1900, shows a somewhat smaller proportion in the age periods 5 to 14 and 45 to 64, and a somewhat larger proportion in each of the other age periods. Of the Chinese and Japanese each, a smaller proportion were in the age periods 15 to 24 and 25 to 44 in 1910 than in 1900, and a larger proportion in each of the other age periods.

Marital condition.—In Table 14 statistics relating to marital condition in 1910 and in 1900 are shown for five racial groups. Among Hawaiians 15 years of age and over, both males and females, the percentage married, widowed, and divorced in the aggregate was slightly higher in 1910 than in 1900. Among part Hawaiians and Caucasians the corresponding percentage was

slightly lower in 1910 than in 1900. Among Chinese and Japanese the 1910 percentage for males was higher, and that for females lower than the corresponding percentage in 1900. The percentage single was generally lower for males, and higher for females, in 1910 than in 1900, the exception being, among males, part Hawaiians and Caucasians, and, among females, the Hawaiians.

¹ Less than one-tenth of 1 per cent.

The statistics of marital condition for 1910 are given in Table 15, by race, sex, and age periods. In the total population 15 years of age and over, 49.3 per cent of the males and 16.4 per cent of the females were single; the percentage married was 45.1 among males and 76.4 among females; and the percentage widowed, 4.5 and 6.2, respectively. The number reported as divorced, comprising 1 per cent of the males and 0.9 per cent of the females, is believed to be too small, because of the probability that some divorced persons class themselves as single or widowed.

As explanatory of the higher percentage single among males, may be noted the great excess of males in the adult population, and the fact that, as compared with men, women marry younger. Of the females 15 to 19 years of age, 28.3 per cent were married and of the males 2.1 per cent; in the age group 20 to 24 years the percentage married was 79.4 for females and 18.8 for males; in the age group 25 to 34 it was 90.7 for females and 47.5 for males; and in the age group 35 to 44, 89.8 and 59.6, respectively. The disparity in the percentages is less marked in the age group 45 to 64, and

among persons 65 and over the percentage married is higher for males than for females.

For the principal races the percentage married, by sex, in the population 15 years of age and over was as follows: Hawaiian, 53.1 for males and 69.9 for females; Caucasian Hawaiian, 51.2 and 54, respectively; Asiatic Hawaiian, 42.6 and 56.1; Portuguese, 60.3 and 70.1; Porto Rican, 49.4 and 82; Spanish, 65.2 and 81.8; "other Caucasian," 42.9 and 55.9; Chinese, 39.3 and 73.9; and Japanese, 44.2 and 91.9.

Although the percentage widowed in the total population 15 years of age and over was only slightly higher for females than for males—6.2 per cent as compared with 4.5 per cent—it was materially higher for females than for males in the older age groups. Among the Hawaiian, Spanish, Japanese, and Korean elements the proportion widowed for males 15 years of age and over exceeded that for females.

The variation in the proportions married, widowed, and divorced among the several groups is largely accounted for by differences in the age and sex composition.

PLACE OF BIRTH AND YEAR OF IMMIGRATION.

State of birth.—Table 16 shows, for 1910 and 1900, the distribution of the native population according to state of birth. In 1910, 86,483, or 88.1 per cent of the native population, were born in the territory of Hawaii; 3,510, or 3.6 per cent, were born in Porto Rico; 2,372, or 2.4 per cent, in the Philippine Islands; and 5,688, or 5.8 per cent, in the United States proper. Of those born in the United States, 1,319 were natives of California. In 1900, 93.2 per cent of the native population were born in Hawaii and 6.7 per cent in the United States. The number of persons born in the Philippine Islands, as returned at the census of 1910, exceeds the number of Filipinos shown in the classification by race (Table 4). This is, of course, easily explained by the fact that the basis of the classification in one case (Table 16) is place of birth, and in the other (Table 4) racial descent. A person born in the Philippine Islands, for example, may in Table 4 be classified as a Caucasian, and a person born in Hawaii be classified as a Filipino. As these classifications are independent of one another these tables do not show what proportion of the persons born in the Philippine Islands and living in Hawaii in 1910 were Filipinos, or what proportion of the Filipinos living in Hawaii were born in the Philippine Islands.

¹ Except Hawaii and the Philippine Islands.

Of the 93,752 foreign-born residents of Hawaii, 59,800, or 63.8 per cent, were natives of Japan; 14,486, or 15.5 per cent, were natives of China; and 4,172, or 4.5 per cent, were natives of Korea. The aggregate for these three countries, 78,458, constituted 83.8 per cent, or approximately five-sixths, of the total foreign-born population. Natives of Portugal constituted 8.1 per cent of the foreign-born element, natives of Spain 1.7 per cent, natives of Russia 1.1 per cent, natives of Germany 1 per cent, and natives of the Atlantic islands 1 per cent. No other country contributed as much as 1 per cent to the foreign-born population. In 1900 the proportion of Japanese in the foreign-born population was somewhat less, and the proportion of Chinese greater, than it was in 1910.

Year of immigration of the foreign born.—In the distribution of the foreign-born population by year of immigration, as given in Table 18, the calendar year is the basis of the classification, and the date given is the year of immigration to the United States or to any of its possessions—not necessarily the year of immigration to Hawaii. Of the foreign-born residents very nearly one-half—46,364, or 49.5 per cent—immigrated to the United States during the period from January 1, 1901, to April 15, 1910, and of these, 11,936, or more than one-fourth, designated 1907 as the year of their immigration; 3,435 designated the year 1908; and 2,191, the year 1909.

RACE.	Total foreign born: 1910	YEAR OF IMMIGRATION.										
		1910, to April 15.	1909	1908	1907	1906	1905	1901 to 1904	1896 to 1900	1891 to 1895	1890 or earlier.	Year not reported.

Negro and all other.....	198	16	1	2	2	20	12	13	121	11

Of the foreign born who had come into the country subsequently to 1900, 35,433, or 76.4 per cent, were Japanese. Only 647 of the 14,479 foreign-born Chi-

nese designated a year subsequent to 1900 as the year of their immigration, but practically all of the Koreans have arrived since 1900.

MALES OF VOTING AND MILITIA AGES.

Voting and militia ages.—As enumerated in 1910 the number of males 21 years of age and over was 83,996, of whom 59,021, or 70.3 per cent, were Chinese, Japanese, or Koreans, 41,795, or nearly one-half, being Japanese; 13,900, or 16.5 per cent, were Caucasians; 7,926, or 9.4 per cent, were Hawaiians; and 3,149, or 3.7 per cent, were of other races. In 1900, males of voting age numbered 79,607, the number of such males having increased during the decade by 4,389. The number of Chinese males 21 and over, however, decreased 4,900 during the decade, and the number of Hawaiians 953, the aggregate increase for all other races combined being 10,242. Males of militia age—those from 18 to 44 years, inclusive—decreased in number from 72,596 in 1900 to 70,962 in 1910. The number of such males decreased among the Chinese, Japanese, and Hawaiians, and increased among the Caucasians, the part Hawaiians, and the group "Filipino, negro, and all other."

The number of males of voting and of militia age is given by race for 1910 and 1900 in Table 19.

Citizenship.—Of the total males 21 years of age and over in 1910, as shown by Table 20, 65,810, or 78.3 per cent, were foreign born. Of these foreign-born males of voting age, 2,562, or 3.9 per cent, were naturalized, 425 had taken out first papers, 62,491 were alien, and for 332 the status as to citizenship was not reported. Of the 7,385 foreign-born Caucasian males of voting

age, 2,394, or 32.4 per cent, were naturalized. Of the 41,718 foreign-born Japanese males 21 and over, only 11 were naturalized; and of the 13,025 Chinese, only 132 were naturalized.

RACE.	FOREIGN-BORN MALES 21 YEARS OF AGE AND OVER: 1910				
	Total.	Naturalized.	Having first papers.	Alien.	Citizenship not reported.
Total.....	65,810	2,562	425	62,491	332

Korean.....	3,531	3,517	14
Negro and all other.....	151	25	5	115	6

There were 18,186 native males 21 and over in 1910, and if to these be added the 2,562 naturalized foreign-born males of that age, an aggregate is obtained of 20,748 native or naturalized male citizens 21 and over. Of this aggregate, which is distributed by race in Table 21, 42.9 per cent were Caucasians, 38.2 per cent were Hawaiians, 9.3 per cent were part Hawaiians, 3.9 per cent were Chinese, and 0.4 per cent were Japanese. Of all foreign-born males 21 and over not reported as naturalized, 91.9 per cent were Chinese, Japanese, or Korean.

¹ Includes 332 whose status as to citizenship was not reported.

SCHOOL ATTENDANCE, ILLITERACY, AND INABILITY TO SPEAK ENGLISH.

School attendance.—The statistics of school attendance are based upon the answers to the inquiry as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910. Table 23 gives the number, as returned in 1910, and the percentage attending school in the population of school age. Persons of school age—that is, from 6 to 20 years, inclusive—numbered 45,548, of whom 27,912,

or 61.3 per cent, attended school. In addition to these, 879 children under 6 and 405 persons of 21 and over attended school. The percentage of school attendance was 60.3 for boys of school age, and 62.4 for girls; it was 75 for children from 6 to 9; 92.5 for children from 10 to 14; and 25.2 for the ages from 15 to 20. The percentage for Caucasian Hawaiian children aged 6 to 14 was 88.6; for Asiatic Hawaiian, 88.2; for Hawaiian, 87; for "other Caucasian," 84.2;

STATISTICS FOR HAWAII.

for Japanese, 83.7; for Portuguese, 82.3; for Chinese, 80.8; for Korean, 77.2; for Porto Rican, 55.8; and for "Filipino, negro, and all other," 72.3 (see Table 22). Details relating to school attendance, as returned at the census of 1910, are given in Table 24 by race, sex, and single years of age for the ages 6 to 20 years.

For purposes of comparison with 1900, the 1910 data are summarized in Table 25 for the ages 5 to 20 years. The percentage of school attendance for children 5 to 20 was materially higher in 1910 than in 1900, being 57.5 per cent in 1910 and 45.3 in 1900; the percentage for children from 5 to 9 was 62 in 1910 and 57.7 in 1900; for children from 10 to 14, 92.5 and 84.2, respectively; and for the ages from 15 to 20, 25.2 and 12.3. The percentage for Hawaiian children of 10 to 14 years had increased from 88.3 to 95.1; for part Hawaiian, from 91.6 to 96.9; for Caucasian, from 82.1 to 88.8; for Chinese, from 72.4 to 92; and for Japanese, from 70.7 to 94.2.

The number and the proportion of persons attending school in urban communities, as represented by the population of Honolulu and Hilo, and in rural communities, as represented by the population of the remainder of the territory, are given in Table 22 for persons 6 to 20 and 6 to 14 years of age, respectively.

The percentage of school attendance for the ages from 6 to 20, as shown by Table 22, was 66.4 in urban communities and 58.7 in rural communities; among the Hawaiians and the part Hawaiians, however, it was higher in the rural than in the urban population.

For children from 6 to 14 the percentage was 84.4 in the urban population, varying but little in the respective classes; and 82.8 in the rural, being lowest for the Porto Ricans (54).

Illiteracy.—The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read. Table 26 gives the number and percentage of illiterates among the population 10 years of age and over, as shown by the census of 1910, and Table 27 shows comparative figures for 1900. The number of illiterates in the population 10 years of age and over in 1910 was 39,892, the percentage of illiteracy among persons of this age being 26.8 in 1910, as compared with 33.1 in 1900. Among males 10 years of age and over the percentage in 1910 was 24; among females, 32.9. For the age period 10 to 14 it was 3.2; for the age period 15 to 19, 13; for the age period 20 to 24, 21.6. In the older age periods the percentage ranged from 30.7 to 35.2. The percentage was highest among the Porto Ricans

(73.2), and lowest among the Caucasian Hawaiians (1.3). Except among the Porto Rican and the Spanish elements and the group "Filipino, negro, and all other," it was low for all races among children of 10 to 14 years.

As shown by Table 27, the percentage of illiteracy for the Japanese decreased from 46.2 in 1900 to 35 in 1910; for the Chinese, from 40 to 32.3, respectively; for the Hawaiians, from 7.2 to 4.7; and for the part Hawaiians, from 1.8 to 1.4. Among Caucasians in the aggregate the percentage of illiteracy was slightly higher in 1910 than it was in 1900, 27.5 as compared with 26.5. Among males of voting age the percentage of illiteracy decreased from 34.3 in 1900 to 27.1 in 1910, and the lowest percentage shown in 1910 is for the Caucasian Hawaiians, 1.4 (see Table 30).

POPULATION.

ILLITERATES IN THE POPULATION 10 YEARS OF AGE AND OVER: 1910.

Inability to speak English.—Table 28 shows, by race, the number and percentage of persons 10 years of age and over in 1910 who were unable to speak English.

In the population 10 years of age and over in 1910 there were 84,177 persons who could not speak English. This element constituted 56.6 per cent of the total population 10 years of age and over. The proportion was highest among the Koreans, 81.7 per cent, and only slightly lower among the Japanese, 79 per cent, while it also exceeded one-half among the Spanish, Porto Ricans, and Chinese, and the group "Filipino, negro, and all other." It was lowest among the Caucasian Hawaiians, 4.3 per cent.

DWELLINGS AND FAMILIES.

In census usage a "dwelling" is any building or structure in which one or more persons reside. The term "family" as here used means a household or group of persons, whether related by blood or not, who share a common abode, and also any person living entirely alone. As shown by Table 29, the number of dwellings in Hawaii in 1910 was 43,764, of which 9,047 were in Honolulu district. The number of families was 52,219, of which 11,847 were in Honolulu. The number of families to 100 dwellings was 119.3 in the territory as a whole, and 130.9 in Honolulu. The average number of persons per dwelling in the territory as a whole was 4.4 in 1910 and 4.8 in 1900; the

average number per family, 3.7 and 4.2, respectively. In Honolulu district the average number of persons per dwelling was 5.8 in 1910 and 5.6 in 1900; the average number per family, 4.4 and 4.8, respectively.

STATISTICS OF AGRICULTURE FOR THE TERRITORY AND ITS COUNTIES.

Prepared under the supervision of LE GRAND POWERS, former Chief Statistician for Agriculture,
and JOHN LEE COULTER, Expert Special Agent for Agriculture.

Introduction.—This section presents a complete statement of the statistics of agriculture for Hawaii collected at the census of 1910. Statistics of farms and farm property relate to April 15, 1910; those of farm products, expenses, and receipts are for the calendar year 1909.

Definitions.—To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

Farm.—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term referring to the work of growing crops, producing other agricultural products, and raising animals, fowls, and bees. A "farm" as thus defined may consist of a single tract of land, or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. Further, when a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1909.

Farmer.—A "farmer" or "farm operator," according to the census definition, is a person who directs the operations of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, tenants, and managers.

Farm owners include (1) farmers operating their own land only, and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "owners" being then restricted to those owning all their land.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1910 in two classes: (1) *Share tenants*—those who pay a certain share of the products, as one-half, one-third, or one-quarter; and (2) *cash tenants*—those who pay a cash rental or a stated amount of labor or products, such as \$7, 10 bushels of wheat, or 100 pounds of seed cotton per acre.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm land.—Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. The same classification was followed in 1880. At former censuses, except that of

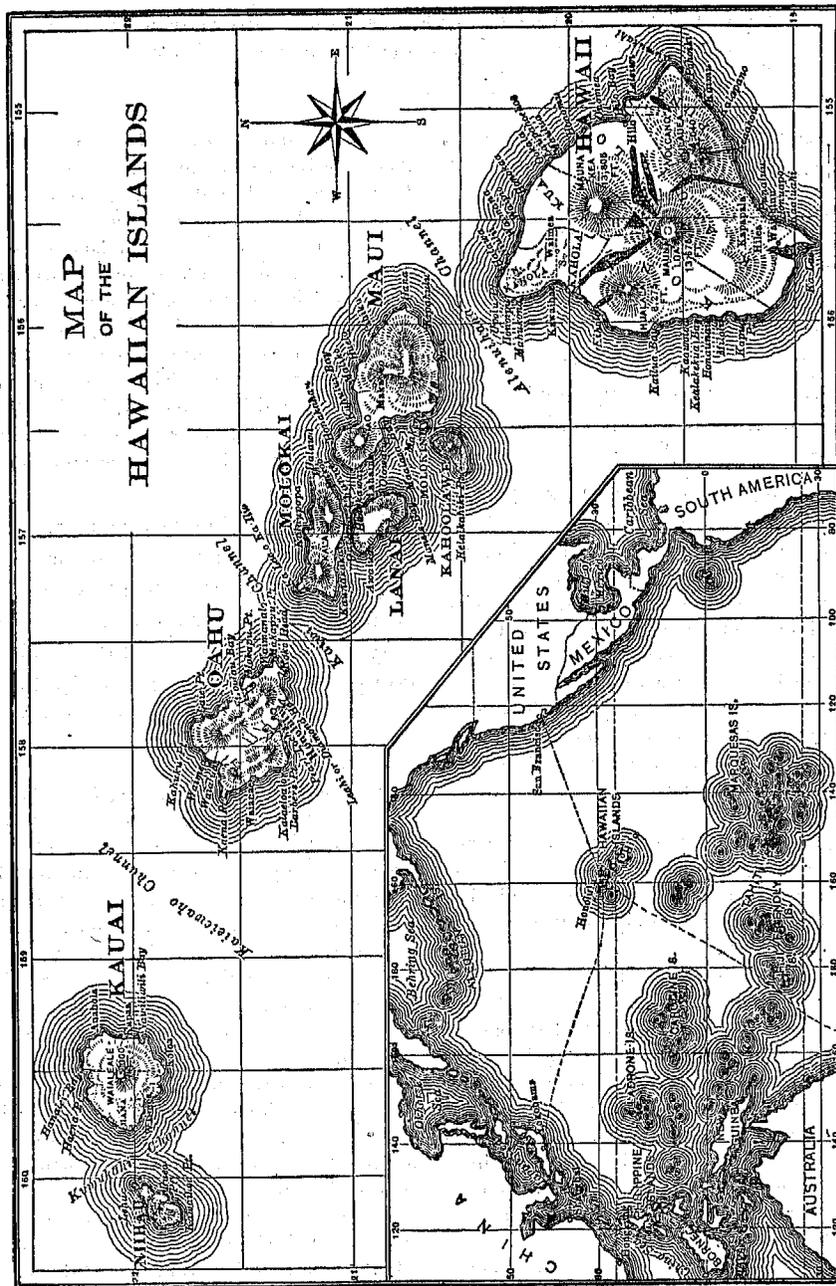

1880, farm land was divided into improved land and unimproved land, woodland being included with unimproved land. *Improved land* includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. *Woodland* includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. *All other unimproved land* includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics therefore must be considered at best only a close approximation.

Total value of farm products.—No attempt has been made at this census to compute or even to estimate approximately the total value of farm products. Among the numerous difficulties which stand in the way of obtaining a total which would be at once comprehensive, free from duplication, and confined exclusively to the products of a definite period of time are the following:

(1) The duplication resulting from the feeding of farm crops to farm live stock, when the value both of the products derived from such live stock and of the crops are included in the same total. In 1900 an attempt was made to eliminate this duplication by means of an inquiry as to the total value of the products of each farm fed to the live stock on that farm, but, aside from the fact that this would not eliminate the duplication where the products of one farm are fed to the live stock of another farm, it is believed that the farmers were unable to make even approximately accurate answers to the inquiry, and it was accordingly not included in the schedule for 1910.

(2) The fact that farmers may buy domestic animals during the census year which are subsequently sold or slaughtered during the same year, and that it is impossible to eliminate the duplication accurately; and the further fact that the value of domestic animals sold or slaughtered, or of forest products cut, during a given year (as well as some other minor items), does not usually represent a value created wholly during that year, and that it is quite impossible to ascertain the value created during the year.

(3) The fact that the returns for some products are incomplete. The returns for all products are to a considerable extent estimates made by the farmers. Special difficulty was encountered in cases where the person in possession of the farm in April, 1910, when the census was taken, was not in possession of it during the crop year 1909. In such cases the farmer was not always able to report completely and accurately the products of the land for the preceding year. It is probable that the returns for the principal crops are in general fairly accurate, but that those for minor crops and for dairy and poultry products are frequently understated, particularly because the home consumption was disregarded or underestimated.

FARMS AND FARM PROPERTY.

The territory of Hawaii consists of a group of 20 islands, which lie in the North Pacific Ocean, 2,100 miles from San Francisco to the south and west and more than 2,000 miles from the nearest mainland. The main islands of the group form a chain, running from northwest to southeast and extending over a distance of 390 miles from the westernmost point of Niihau to the eastern extremity of the island of Hawaii. It lies within longitude 154° 40' and 160° 30' west, and latitude 22° 16' and 18° 55' north.

Of the 20 islands composing the group, only 9, Hawaii, Maui, Oahu, Kauai, Molokai, Lanai, Niihau, Kahoolawe, and Midway, are at all inhabited, the last two having only a very small population. The other islands are mere rocks and coral reefs, which workmen occasionally visit for the purpose of collecting eggs and the guano deposits which are found there in abundance.

Geologically the island group is of volcanic origin

and of comparatively recent formation. The soil is composed almost wholly of basaltic lavas in various stages of decomposition. The most important islands, Hawaii, Maui, and Oahu, contain large areas of fertile land, the most productive being the lowlands which embrace large tracts of deep soil, consisting of sedimentary deposits washed down from the mountains by the tropic rains, and beds of volcanic ash and lava disintegrated *in situ* where the soil either is sedimentary in its nature or consists of large pieces of volcanic ash and of lava disintegrated *in situ* has been deposited to great depths. The climatic conditions on these islands are favorable for agricultural activities.

Progress during the decade 1900 to 1910.—The following table summarizes for the territory the more significant facts relating to population and total area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 (June 1)	INCREASE. ¹	
			Amount.	Per cent.
Population.....	191,909	154,001	37,908	24.6
Number of all farms.....	4,320	2,273	2,047	90.1
Approximate area..... acres..	² 4,127,360	² 4,127,360

Average value of land and buildings per acre.....	\$32.01	\$23.00	\$9.01	39.2

¹ A minus sign (-) denotes decrease.

² Area given is total area, as area for land only is not obtainable.

Between 1900 and 1910 the population of Hawaii increased by 37,908, or 24.6 per cent, the number of farms increased by 2,047, or 90.1 per cent, while there was an apparent decrease of 0.7 per cent in the acreage of land in farms, and an increase of 3.6 per cent in the improved acreage. The average size of farms decreased from 1,148.1 acres to 599.7 acres, thus being about one-half as great in 1910 as in 1900.

Farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), increased in value during

the decade \$22,278,000, or 30.1 per cent. This increase consisted chiefly of an increase in the value of land, which amounted to \$21,649,000, or 38.3 per cent; the value of buildings increased 35.3 per cent, and that of live stock 71.5 per cent. There was a decrease of \$2,461,000, or 21.4 per cent, in the value of implements and machinery, due largely to the fact that in 1900 a considerable part of the apparatus used in the manufacture of sugar on plantations was reported under the heading "agricultural implements and machinery," while in 1910 most of this equipment

was excluded from the agricultural statistics and reported as a part of the value of manufacturing establishments.

Owing to the decided decrease in the size of farms, the average value of farm property per farm decreased between 1900 and 1910 by \$10,287, or 31.6 per cent, while the value of land per acre increased from \$21.64 to \$30.16, or 39.4 per cent.

Farms by size groups: 1910 and 1900.—The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900, consolidating into one group the farms of less than 20 acres and also the farms of between 175 and 499 acres. It also shows the number and percentage of increase during the decade, and the per cent of total for each class at each census:

SIZE GROUP.	NUMBER OF FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1910	1900	Number.	Per cent.	1910	1900
All farmers	4,320	2,273	2,047	90.1	100.0	100.0
Under 20 acres.....	3,267	1,580	1,687	106.8	75.6	69.5
20 to 49 acres.....	520	285	235	82.5	12.0	12.5
50 to 99 acres.....	190	129	61	47.3	4.4	5.7

500 to 999 acres.....	10	13	-3	-23.1	0.3	0.7
1,000 acres and over.....	26	23	3	13.0	0.7	1.3

¹ A minus sign (-) denotes decrease.

During the decade there was an increase in the number of farms of every size group considering both white and colored farmers together, although there was a decrease of 3 in the number of 175 to 499 acre farms operated by white farmers, and of the the same number in the 500 to 999 acre class among colored farmers. Taken as a whole the greatest increase both absolute and relative was in farms of under 20 acres. This is the only size group which shows a higher percentage of the total in 1910 than in 1900, the number having more than doubled during the decade. The 20 to 49 acre group also showed a material gain amounting to 235 farms, or 82.5 per cent, while its percentage of the total remained nearly the same.

Among the white farmers, those operating farms of under 20 acres in size increased 171, or 83 per cent, while there was exactly three times as many operating 500 to 999 acre farms in 1910 as in 1900. Their gain in number was only 16, however. The percentage of the total of these two sizes and the 50 to 99 acre group was greater in 1910 than in 1900, that of all other sizes being smaller.

Among the colored farmers the number operating farms of under 20 acres increased 1,516, or 110.3 per cent, and the number of those operating 20 to 49 acre farms increased 209, or 112.4 per cent. These are the only sizes in which the percentage of the total increased during the decade.

In 1900, 82.1 per cent of the farms were under 50 acres in size, this proportion having increased to 87.7 per cent in 1910. Among white farmers the percentages were respectively 59.9 and 66.7, and among colored farmers 88.4 and 92.1. Of the large plantations (500 acres and upward) more than three-quarters were operated by white farmers in 1910, this proportion being slightly greater than 10 years earlier.

Color and race of colored farmers: 1910 and 1900.—The next table shows for white and colored farmers (the latter by race) combined and for each class separately the total number of farms and the number operated by owners, part owners, cash tenants, share tenants, and managers, respectively.

RACE.		NUMBER OF FARMS.					
		All farmers.	Own-ers.	Part own-ers.	Share ten-ants.	Cash ten-ants.	Man-agers.
Total	1910..	4,320	834	129	214	2,894	249
	1900..	2,273	684	139	67	1,255	123
White	1910..	753	472	44	15	103	119
	1900..	509	271	41	7	98	92
Hawaiian	1910..	463	309	45	6	81	22
	1900..	488	287	73	17	104	7
Japanese	1910..	2,138	26	16	130	1,923	43
	1900..	531	40	5	21	464	1
Chinese	1910..	870	22	21	58	720	55
	1900..	742	83	20	22	589	28
Black	1910..	7	3	2	1	1
	1900..	2	2
All other Asiatics	1910..	83	2	1	4	66	10
	1900..	1	1

There was an increase of 244 white farmers, or 47.9 per cent, during the decade, 204 of these belonging to the owner (including part owner) class. There were 25 fewer Hawaiian farmers in 1910 than in 1900, owners and managers showing small increases in number, however. Among the Chinese farmers, a total gain of 134 was reported, this amounting, however, to only 18.1 per cent. There was an increase of 131 in the cash tenant class. By far the greatest gain in number of farmers was reported among the Japanese, there having been an increase of 1,607, or 302.6 per cent. There was a decrease of 14, or 35 per cent, among Japanese owners, however, but large increases in all other tenures, the greatest absolute gain being among cash tenants, from 464 to 1,923, and the greatest relative increase among managers, from 1 to 43. In 1900, Japanese farmers constituted 23.4 per cent of all farmers and 37 per cent of all cash tenants, and in 1910 they represented 49.5 per cent and 66.4 per cent, respectively.

The next table shows the per cent distribution by tenure groups of the number of farms as given in the preceding table.

RACE.		PER CENT OF TOTAL.					
		All farm-ers.	Own-ers.	Part own-ers.	Share ten-ants.	Cash ten-ants.	Man-agers.
Total.....	1910..	100.0	19.3	3.0	5.0	67.0	5.8
	1900..	100.0	30.1	6.1	2.9	55.2	5.6
White.....	1910..	100.0	62.7	5.8	2.0	13.7	15.8
	1900..	100.0	53.2	8.1	1.4	19.3	18.1
Hawaiian.....	1910..	100.0	66.7	0.7	1.3	17.5	4.8
	1900..	100.0	58.8	15.0	3.5	21.3	1.4
Japanese.....	1910..	100.0	1.2	0.7	6.1	89.9	2.0
	1900..	100.0	7.5	0.9	4.0	87.4	0.2
Chinese.....	1910..	100.0	2.5	2.4	6.6	82.2	6.3
	1900..	100.0	11.2	2.7	3.0	79.4	3.8
Black.....	1910..	100.0	42.9	28.6	14.3	14.3
	1900..	100.0	100.0
All other Asiatics.....	1910..	100.0	2.4	1.2	4.8	79.5	12.0
	1900..	100.0	100.0

For the territory as a whole, the proportion of owners and part owners showed a great falling off, that of the former being, in 1910, less than two-thirds and of the latter less than half of that shown in 1900. Both cash and share tenancy increased materially, the latter with greater proportionate rapidity. The change in managers was small.

These changes are clearly explained by the fact that the decade 1900-1910 covers the period since the organization of the territorial government and the extension of the American Constitution to Hawaii. These events ended the former system of contract labor on the sugar plantations and favored the gradual substitution to tenancy agreements for hired labor, especially among the oriental cane growers. Meanwhile, the Government's policy of homesteading the public land has added to the number of farms owned or occupied by citizens.

Among white farmers the proportion of owners and share tenants increased while all other classes showed decreases, the most notable being cash tenants. The per cent of owners and managers increased among the Hawaiians, or native population, and this class also showed the highest percentage of owners and lowest of share tenants of any race group. Among the Japanese the proportion of owners, part owners, and managers is by far the lowest of any race group while they rank first among the cash tenants and a close second to the Chinese among share tenants—the number of negro farmers being too small for consideration. Nine out of every ten Japanese farmers operate under a cash tenure. The per cent of owners among this race fell from 7.5 in 1900 to 1.2 in 1910. Practically the same movement is seen among the Chinese farmers, their proportion of cash tenants being less than that of the Japanese, however, that of the other tenancies being correspondingly larger. The proportion of Chinese owners in 1910 was about one-fifth that of 1900, that of part owners about the same, and that of share tenants and managers about doubled.

In 1900 one South Sea Island owner was reported, and in 1910, 83 farmers were classified as "all other

Asiatics." These divide among the different tenures along the same general lines as the Japanese and Chinese. Seven negro farmers were reported in 1910 as compared with two in 1900.

Farm tenure: 1910 and 1900.—The following table shows, for white and colored farmers combined and for each class separately, the distribution of the farms of Hawaii according to character of tenure for 1910 and 1900, together with the amount and percentage of increase during the decade, and per cent of total for each class at each census:

TENURE GROUP.	NUMBER OF FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1910	1900	Num-ber.	Per cent.	1910	1900
All farmers.....	4,320	2,273	2,047	90.1	100.0	100.0
Owners.....	834	684	150	21.9	19.3	30.1
Part owners.....	129	139	-10	-7.2	3.0	6.1
Share tenants.....	214	67	147	219.4	5.0	2.9
Cash tenants.....	2,894	1,255	1,639	130.6	67.0	55.2
Managers.....	249	128	121	94.5	5.8	5.6
White.....	753	509	244	47.9	100.0	100.0
Owners.....	472	271	201	74.2	62.7	53.2
Part owners.....	44	41	3	7.3	5.8	8.1
Share tenants.....	15	7	8	114.3	2.0	1.4

Managers.....	119	92	27	29.3	15.8	18.1
Colored.....	3,567	1,764	1,803	102.2	100.0	100.0
Owners.....	302	413	-51	-12.3	10.1	23.4
Part owners.....	85	98	-13	-13.3	2.4	5.6
Share tenants.....	199	60	139	231.7	5.6	3.4
Cash tenants.....	2,791	1,157	1,634	141.2	78.2	65.6
Managers.....	130	36	94	261.1	3.6	2.0

¹ A minus sign (-) denotes decrease.

During the decade there was an increase of 2,047 farms, or 90.1 per cent, this increase being participated in by each tenure class of farmers taken as a whole, except part owners. The greatest absolute gain; 1,639 farms, was among the cash tenants and the greatest relative increase among the share tenants, these two classes together showing a gain of 1,786 farms, or 135.1 per cent. Although "owners" showed a gain of 21.9 per cent for the decade and "managers" one of 94.5 per cent, the percentage of the former fell from 30.1 of the total to 19.3, while that of the latter was practically unchanged. The proportion of cash tenants increased from 55.2 to 67 per cent and of share tenants from 2.9 to 5 per cent.

Among white farmers increases appeared in each class, although the numerical gain was of little consequence except among owners, where it amounted to 201 farms, or 74.2 per cent. The number of share tenants more than doubled, but the total was only 15 farms in 1910.

Of the colored farmers the number of both owners and part owners decreased during the decade, while the other classes increased materially. Of the total increase of 1,639 cash tenants all but 5 were among the colored farmers. The general tendency among the whites is toward ownership, while among the non-whites it is in the contrary direction. The greatest relative gain among the latter was in managers, 261.1 per cent, followed by share tenants, 231.7 per cent, and cash tenants, 141.2 per cent.

DOMESTIC ANIMALS, POULTRY, AND BEES.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15 and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15, and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this chapter, but in the general reports of the census the figures for the several states and territories will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

The next table summarizes the statistics of domestic animals on farms for the territory, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Number.	Per cent of all farms.	Number.	Value.	Average value.
Total.....	2,925	67.7		\$4,292,945	
Cattle	642	14.9	145,029	2,279,026	\$15.71
Dairy cows (cows and heifers kept for milk, born before Jan. 1, 1900).....	479	11.1	6,861	235,321	34.30
Other cows (cows and heifers not kept for milk, born before Jan. 1, 1900).....	326	7.5	66,881	1,045,420	15.03
Heifers born in 1909.....	361	8.4	15,500	146,953	9.48
Calves born after Jan. 1, 1910.....	362	8.4	8,582	59,404	6.58

Goats	44	1.0	4,461	3,067	0.69
Carabaos (Chinese buffaloes)	76	1.7	399	12,683	31.79

The total value of live stock on farms, including domestic animals, poultry, and bees in 1910, was \$4,407,000, of which domestic animals contributed \$4,293,000. The value of cattle represented 51.7 per cent of the total value of live stock on farms; that of

mules, 20.8 per cent; that of horses, 17.8 per cent; that of sheep, 3.1 per cent; that of swine, 3.1 per cent; that of poultry 1.5 per cent; that of asses and burros, 0.4 per cent; that of carabaos (Chinese buffaloes), 0.3 per cent; and that of goats, 0.1 per cent.

Of the total number of farms enumerated, 2,925, or 67.7 per cent, report domestic animals of some kind, the number without any domestic animals being 1,395.

Of all the farms in the territory, 52.2 per cent report horses, but only 5 per cent report colts born in 1909, and 2.5 per cent report colts born after January 1, 1910. The average value of mature horses was reported at \$53.19, an increase over the value in 1900 of \$16.92, or 46.7 per cent. Mature mules were reported in 1910 at more than double the value of mature horses, but there was little difference between the reported values of horse and mule colts.

Swine were reported by 32.3 per cent of the farms, but only 14.7 per cent reported pigs born after January 1, 1910. The average value of swine reported as "hogs and pigs born before January 1, 1910," was \$8.88, while that of spring pigs was \$4.06.

Only 14.9 per cent of the farms reported cattle, and only 11.1 per cent had "dairy cows," and 7.5 per cent had "other cows." There was an increase during the decade in the average value of both these classes of cows amounting to about 10 per cent.

Asses and burros were reported by 14.1 per cent of the farms; mules by 11.4 per cent; carabaos by 1.7 per cent; goats by 1 per cent; and sheep by 0.7 per cent.

Poultry on farms: 1910 and 1900.—The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value, and the number of farms reporting each kind in 1910:

KIND.	1910 (April 15)				1900 (June 1)
	Farms reporting.		Number of fowls.	Value.	Number of fowls.
	Number.	Per cent of all farms.			
Total.....	2,308	58.4	95,667	\$65,310	58,143
Chickens.....	2,273	52.6	64,136	47,115	31,888
Turkeys.....	88	2.0	1,742	4,764	4,672
Ducks.....	292	6.8	25,711	12,187	21,508
Geese.....	30	0.7	161	380	75
Guinea fowls.....	11	0.3	341	167	(1)
Pigeons.....	61	1.4	3,576	717	(2)

¹ Included with chickens.

² Not reported.

Of the total number of farms in Hawaii, 2,308, or 53.4 per cent, reported fowls in 1910. The increase in the number of fowls on Hawaiian farms during the last decade amounted to 64.5 per cent. The total number in 1910 was 95,667, valued at \$65,310. About two-thirds of this number were chickens, and somewhat more than one-fourth were ducks. Pigeons and turkeys were the only other fowls of which there were more than 1,000.

Bees on farms: 1910.—The number of farms reporting bees has increased from 46 in 1900 to 66 in 1910, or 43.5 per cent. The number of colonies of bees increased from 1,387 to 12,621, or 809.9 per cent, and their value increased from \$8,426 to \$48,945, or 480.9 per cent. The average value of bees per farm reporting was \$183.17 in 1900 and \$741.59 in 1910. About 2 farms in every 100 report bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and in plantation villages, where laborers not operating farms independently often keep horses, cattle, swine, and poultry. Statistics for such animals are shown below.

KIND.	Number of inclosures reporting.	ANIMALS.		
		Number.	Value.	Average value.
Total	7,154		\$1,095,474	
All cattle.....		4,042	113,227	\$28.01
Dairy cows.....	811	1,621	72,095	44.48
Horses.....		11,708	760,584	64.96
Mules.....		1,419	136,657	96.31
Asses and burros.....	622	1,088	8,603	7.91
Swine.....		10,360	75,053	7.24
Sheep.....		12	64	5.33
Goats.....	181	659	1,286	1.95

No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table age groups are omitted for the sake of brevity.

Domestic animals on farms and not on farms: 1910.—The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

KIND.	DOMESTIC ANIMALS.					
	Total.		On farms.		Not on farms.	
	Number.	Value.	Number.	Value.	Number.	Value.
Total		\$5,388,419		\$4,292,945		\$1,095,474
All cattle.....	149,071	2,392,253	145,029	2,279,026	4,042	113,227
Dairy cows.....	8,482	307,416	6,861	235,321	1,621	72,095
Horses.....	27,564	1,546,791	15,856	786,207	11,708	760,584
Mules.....	9,375	1,055,301	7,956	918,644	1,419	136,657

Carabaos (Chinese buffaloes).....	399	12,683	399	12,683		

The total value of all domestic animals in the territory in 1910 was \$5,388,000, of which the value of animals not on farms represented 20.3 per cent.

LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops, the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The next table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899.

The number of farms reporting dairy cows on April 15, 1910, was 479, but only 241 reported the production of any kind of dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 227 (somewhat less than the total number reporting dairy

products), and the number of dairy cows on such farms on April 15, 1910, was 4,764. The amount of milk reported was 1,028,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 216 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient, and that the distinction between dairy and other cows is not always strictly observed in the census returns.

	FARMS REPORTING.		Number or quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms.			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	479	11.1	6,861	Head

Butter sold.....			96,209	Lbs.	35,455	0.37

¹ Less than one-tenth of 1 per cent.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience, a partial total has been presented comprising the reported value of milk and cream sold as such (none was reported as sold on the butter fat basis) and the reported value of butter made, whether for home consumption or for sale. The total thus obtained for 1909 is \$215,000, which may be defined as the total value of dairy products exclusive of milk and cream used on the farm producing.

About three-fourths of the milk reported as produced by Hawaiian farmers in 1909 was sold as such. The butter made on farms was valued at \$21,792.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter are approximately comparable. The table shows a material decrease between 1899 and 1909 in the amount of butter made.

Wool: 1909 and 1899.—The next table gives statistics as to the production of wool on farms, the figures being partly based on estimates.¹

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value.
Sheep of shearing age on farms April 15, 1910.....	30	60,294			
Wool produced, as reported, 1909.....	12	67,750	72,570	334,955	\$52,414
Total production of wool (partly estimated):					
1909.....			75,767	349,711	\$54,723
1899.....			93,719	424,228	\$3,686
Increase, 1899 to 1909.....			-17,952	-74,517	1,037
Per cent of increase.....			-19.2	-17.6	1.9

¹A minus sign (-) denotes decrease.

The total number of sheep of shearing age in Hawaii on April 15, 1910, was 60,294, representing a decrease of 28.7 per cent as compared with the number on June 1, 1900 (84,606). The approximate production of wool during 1909 was 75,767 fleeces, weighing 349,711 pounds and valued at \$54,723. Of these totals about one twenty-fifth represents estimates.

¹ Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 18 farmers who reported the possession of 2,544 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in some cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

All of the wool reported for 1909 was produced on farms having sheep April 15, 1910. The average weight per fleece in 1909 was 4.6 pounds, as compared with 4.5 pounds in 1899, and the average value per pound was 16 cents, as compared with 13 cents in 1899. Although 44 farmers reported 4,451 goats and kids on their farms April 15, 1910, no production of goat hair or mohair was reported for 1909.

Poultry products: 1909 and 1899.—The next statement gives data relative to the production and sale of eggs and poultry.

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms April 15, 1910.....	2,308	95,667		
On farms reporting eggs produced in 1909.....	1,675	86,004		
On other farms.....	633	9,663		
Eggs produced, as reported, 1909.....	1,096		328,224	\$94,957
Total production of eggs (partly estimated):				
1909.....			386,448	\$111,802
1899.....			155,710	\$45,257
Increase, 1899 to 1909.....			230,738	\$66,545
Per cent of increase.....			148.2	147.0
Eggs sold, as reported, 1909.....	870		240,408	\$68,083
Fowls on farms April 15, 1910:				
On farms reporting poultry raised in 1909.....	1,611	80,696		
On other farms.....	697	14,971		
Poultry raised, as reported, 1909.....	1,664		No. of fowls. 122,117	\$74,379
Total poultry raised (partly estimated):				
1909.....			144,773	\$88,178
1899.....				\$1,546
Increase, 1899 to 1909.....				\$20,632
Per cent of increase.....				43.3
Fowls sold, as reported, 1909.....	757		67,516	\$38,850

The total number of fowls on Hawaiian farms on April 15, 1910, was 95,667. Of the 2,308 farms reporting fowls, 633 did not report any eggs produced in 1909 and 697 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 328,224 dozens, valued at \$94,957. According to the Twelfth Census reports the production of eggs in 1899 was 155,710 dozens, the value being \$45,257. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 386,448 dozens, valued at \$111,802. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 144,773 fowls, valued at \$88,178.

Honey and wax: 1909.—Although 66 farms reported 12,621 colonies of bees on hand April 15, 1910, 20 of these farms, with 407 colonies on hand April 15, 1910, made no report of honey and wax produced in 1909. The actual returns show the production of 999,915 pounds of honey, valued at \$33,022, and 30,113 pounds of wax, valued at \$8,765; the true totals are doubtless somewhat above these figures.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The next statement presents statistics relating to the sale or slaughter of domestic animals by Hawaiian farmers during the year 1909, with certain items for 1899.

The total value of domestic animals sold during 1909 was \$831,000, and that of animals slaughtered on farms \$210,000, making an aggregate of \$1,041,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented about three-fourths of the total value of animals sold, and the value of swine sold represented about one-eighth of the total.

The census of 1900 called for the receipts from the sale of domestic animals raised on the farms reporting and the total value of those slaughtered during 1899, which amounted, respectively, to \$298,476 and \$64,081. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from

sales of animals not actually raised on the farms reporting.

CROPS.

Summary: 1909.—The next table summarizes the census data relative to all of the farm crops of 1909. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

The total value of crops in 1909 was \$28,536,000. Of this total, over nine-tenths was contributed by sugar cane. The only other crop with a value of product of over a million dollars was rice; the fruits and nuts, the vegetables, and the coffee produced in 1909 were each valued at over two hundred thousand dollars. No other crop had a value amounting to \$100,000.

The number of farms reporting sugar cane increased from 184 in 1899 to 1,028 in 1909, and the acreage increased from 65,687 to 186,230. The production of sugar cane was 4,240,000 tons in 1909, as compared with 2,239,000 in 1899. The reported value of the crop was \$26,306,000 in 1909, as compared with \$18,763,000 in 1899, but it should be noted in this connection that the value of product for 1909 is that of sugar cane in its original condition, the manufacture of sugar being included in the statistics of manufactures, while in 1899 the manufacture of sugar was treated as an agricultural operation, and the total value of product consisted of \$18,026,000 for sugar

made, \$8,000 for molasses, and only \$729,000 for cane sold as such. The value of the sugar manufactured in Hawaii in 1909 was \$35,950,000.

Orchard fruits, grapes, nuts, and tropical fruits: 1909 and 1899.—The following table presents data with regard to orchard fruits, grapes, nuts, and tropical fruits. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the

STATISTICS FOR HAWAII.

whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due to temporarily favorable or unfavorable climatic conditions.

The total value of tropical fruits produced in Hawaii in 1909 was \$453,000, of which the value of pineapples formed more than two-thirds, and the value of bananas most of the remainder. The total value of grapes produced in 1909 was \$4,579, that of nuts \$2,522, and that of orchard fruits only \$621.

COUNTY TABLES.

County boundaries.—Hawaii consists of the island of Hawaii; Honolulu consists of the island of Oahu, including the city of Honolulu and Midway Island; Kalawao consists of the leper settlement on the island of Molokai (area was 7,040 acres); Kauai consists of the islands of Kauai and Niihau; Maui consists of the islands of Maui, Lanai, and Kahoolawe and the island of Molokai exclusive of the leper settlement.

Tables 1 to 4, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, color of farmers, number of farms classified by size, land and farm area, value of farm property, and number and value of domestic animals and of poultry and

bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives statistics pertaining to the products of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 3 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the year 1909.

Table 4 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

TABLE 1.—FARMS AND FARM PROPERTY, BY COUNTIES: APRIL 15, 1910.

[Comparative data for June 1, 1900, for the territory as a whole are given in italics. Changes in county boundaries between 1900 and 1910 were so numerous and extensive that it is impracticable to make any comparison for the counties.]

STATISTICS OF MANUFACTURES FOR THE TERRITORY, CITIES, AND INDUSTRIES.

Prepared under the supervision of W. M. STEVART, Chief Statistician for Manufactures.

Introduction.—This section gives the statistics of manufactures for the territory of Hawaii for the calendar year 1909, as shown by the Thirteenth Census. It will be reprinted without change as a part of the final reports of the Thirteenth Census.

The text summarizes the general results of the census inquiry, presenting a series of special tables in which the main facts printed in the general tables are given in convenient form for the territory as a whole and for important industries. It also presents tables in which the statistics for the industries of the territory as a whole and for a few important industries are classified by character of ownership, size of establishments, number of wage earners, and prevailing hours of labor, information which could not be presented in general tables for each industry without disclosing the facts for individual establishments.

At the end of the section are two general tables, as follows:

Table I, which gives for 1909 and 1899 the number of establishments and of persons engaged in the industries, primary power, capital, salaries and wages, cost of materials, value of products, and value added by manufacture reported for all industries combined and for certain important industries (1) for the territory as a whole and (2) for the city of Honolulu.

Table II, which gives statistics in greater detail for 1909 for the territory and for a larger number of industries.

Scope of census: Factory industries.—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of organization, location of establishments, size of establishments, labor force, and similar subjects. When use is made of the data for these purposes it is imperative that due attention should be given to the limitations of the figures. Particularly is this true when the attempt is made to derive from them figures purporting to show average wages, cost of production, or profits. These limitations will be fully discussed in the general report on manufactures for the United States as a whole.

The census of 1909 for Hawaii was not confined strictly to manufacturing establishments conducted under the factory system, as distinguished from the neighborhood, hand, and building industries. Where statistics for 1899 are given they have been reduced to a comparable basis by eliminating the latter classes of industries only

when such establishments have not been included in 1909. The census does not include establishments which were idle during the entire year, or had a value of products less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions, or in governmental establishments, except those of the Federal Government.

Period covered.—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for establishments which began or discontinued business during the year.

The establishment.—The term "establishment" comprises the factories, mills, or plants which are under a common ownership or control, and for which one set of books of account is kept.

If, however, the plants constituting an establishment as thus defined were not all located within the same city or state, separate reports were secured in order that the separate totals might be included in the statistics for each state or city. In some instances separate reports were secured for different industries carried on in the same establishment.

Classification by industries.—The establishments were assigned to the several classes of industries according to their products of chief value. The products for a given industry may thus, on the one hand, include minor products quite different from those covered by the class designation, and, on the other hand, may not include the total product covered by this designation, because some part of this product may be made in establishments in which it is not the product of chief value.

Selected industries.—The general tables at the end of this section give the principal facts separately for the industries of the territory. A selection has been made of the leading industries of the territory for more detailed consideration. Sometimes an industry of greater importance than some of those selected is omitted because it comprises so few establishments that these detailed presentations would reveal the operations of individual concerns.

Comparisons with previous censuses.—Owing to the changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. Table I, giving comparable figures for 1909 and 1899, therefore, does not embrace all the industries shown for 1909 in Table II.

Influence of increased prices.—In considering changes in cost of materials, value of products, and value added by manufacture, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures can not be taken as an exact measure of increase in the volume of business.

Persons engaged in industry.—At the censuses of 1909 and 1899 the following general classes of persons engaged in industry have been distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks, and (5) wage earners. In the census of 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners.

The second group included the three classes of salaried officers of corporations, superintendents and managers, and clerks. In the present census an entirely different grouping is employed: That into (1) proprietors and officials, (2) clerks, and (3) wage earners. The first group includes proprietors and firm members, salaried officers of corporations, and superintendents and managers.

At this census the number of persons engaged in industry, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for December 15, or the nearest representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where conditions were exceptional, and particularly in case of certain seasonal industries, such as canning, the December date could not be accepted as typical and an earlier date had to be chosen.

In the case of employees other than wage earners the number thus reported on December 15, or other representative day, has been treated as equivalent to the average for the year, since the number of employees of this class does not vary much from month to month in a given industry. In the case of wage earners the average is obtained in the manner explained in the next paragraph.

Wage earners.—In addition to the report by sex and age of the number of wage earners on December 15, or other representative day, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported each month by 12. The average thus obtained represents the number of wage earners that would be required to perform the work done if all were constantly employed during the entire year. Accordingly, the importance of any industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The distribution of this average number by sex and age has been estimated or computed for each industry on the basis of the proportions shown in the age and sex distribution reported for the wage earners employed in that industry on December 15, or the nearest representative day. It is believed that the distribution thus obtained can be accepted as typical and as sufficiently accurate for statistical purposes.

The number of wage earners reported for the representative day, though given for each separate industry, is not totaled for all industries combined, because in view of the variations of date such total is believed not to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation.

In 1899 the schedule called for the average number of wage earners 16 years and over, classified by sex, with the number of both sexes under 16 years of age for each month, and these monthly statements were combined in an annual average. The change in the method of the enumeration was made to secure more precise information, but the change of method may in some instances affect comparisons between the present and earlier censuses.

Prevailing hours of labor.—The census made no attempt to ascertain the number of employees working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one period to another are disregarded, and no attention is given to the fact that a limited number of employees may have hours differing from those of the majority. In the tables all the wage earners of each establishment are counted in the class within which the establishment itself falls. In most establishments, however, all or practically all the employees work the same number of hours, so that these figures give a substantially correct picture of the hours of labor in manufacturing industries.

Capital.—For reasons stated in prior census reports, the statistics of capital secured by the census canvass are so defective as to be

without value, except as indicating very general conditions. The instructions on the schedule for securing data relating to capital were as follows:

The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises.

Materials.—Cost of materials refers to the materials used during the year, which may be more or less than the materials purchased during the year. The term "materials" includes fuel, rent of power and heat, mill supplies and containers, as well as materials forming a constituent part of the product. Fuel includes all fuel used, whether for heat, light, or power, or for the process of manufacture.

Expenses.—Under "Expenses" are included all items of expense incident to the year's business, except interest, whether on bonds or other forms of indebtedness, and allowances for depreciation.

Value of products.—The value of products for any industry includes the total value of all products manufactured in establishments whose products of chief value fall under the industry designation. The amounts given represent the selling value at the factory of all products manufactured during the year, which may differ from the value of the products sold. Amounts received for work on materials furnished by others are included.

Value added by manufacture.—The value of products is not a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing process carried on in the industry itself. Another part of it, and often by far the larger part, represents the value of the materials used, which have been produced by agriculture or mining or by other industrial establishments. For many purposes, therefore, the best measure of the importance of different classes of industry is the value created as the result of the manufacturing operations carried on within the industry. This value is obtained by deducting the cost of the materials consumed from the value of the product. The figure thus obtained is termed in the census reports "value added by manufacture."

There is a further statistical advantage which "value added" has over gross value of products. In combining the value of products of all industries the value of products produced by one establishment and used as materials in another is duplicated, and the total therefore, gives a greatly exaggerated idea of the wealth created. No such duplication takes place in the total "value added by manufacture."

Cost of manufacture and profits.—Census data do not show the entire cost of manufacture, and consequently can not be used to show profits. No account has been taken of interest and depreciation. Even if the amount of profit could be determined by deducting the expenses from the value of the products the rate of profit on the investment could not properly be calculated, because of the very defective character of the returns regarding capital.

Primary power.—The figures given for this item show the total of the primary power used by the establishments. They do not cover the power developed by motors operated by such power, the inclusion of which would evidently result in duplication.

Location of establishments.—The Census Bureau has classified establishments by their location in cities or classes of cities. In interpreting these figures due consideration should be given to the fact that often establishments are located just outside the boundaries of cities, and are necessarily so classified, though locally they are looked upon as constituting a part of the manufacturing interests of the cities.

Laundries.—The census of 1909 was the first to include statistics of laundries. The reports are confined to establishments using mechanical power. The data are presented separately and are not included in the general total for manufacturing industries, in order to avoid interference with comparisons with prior censuses.

INDUSTRIES IN GENERAL.

General character of the territory.—The territory of Hawaii consists of eight inhabited islands, with a combined area of 6,449 square miles, besides a number of small uninhabited islands. Its population in 1910 was 191,909, as compared with 154,001 in 1900.

Honolulu (coextensive with Honolulu district), with a population of 52,183 in 1910, is the only large city. The remainder of the population is mostly rural. The density of population for the entire territory is 30 per square mile, and if Honolulu is excluded, only 22 per square mile.

Hawaii has no important mineral resources, but its climate and soil are well adapted for agriculture, and its industrial progress is dependent entirely upon its agricultural products. Those manufacturing indus-

tries which have not been called into being by the agricultural products of the islands exist for the production or repair of articles of local consumption.

Importance and growth of manufactures.—Hawaii was annexed to the United States in 1898 and organized as a territory in 1900, and was therefore included in the census of 1900, which was the first enumeration of its manufactures. The industrial census of 1904 was confined to continental United States, consequently no canvass was made in Hawaii.¹

The following table gives the more important figures relative to all classes of manufactures combined for the territory as returned at the censuses of 1909 and 1899, together with percentages of increase for the 10 years:

	NUMBER OR AMOUNT.		PER CENT OF INCREASE.
	1909	1899	1899-1909
Number of establishments.....	500	222	125.2
Persons engaged in manufactures.....	7,572	4,418	71.4
Proprietors and firm members.....	¹ 1,074	244	340.2
Salaried employees.....	594	519	14.4
Wage earners (average number).....	5,904	3,655	61.5
Primary horsepower.....	41,930	19,590	114.0
Capital.....	\$23,875,000	\$10,746,000	122.2
Expenses.....	31,753,000	15,061,000	110.8
Services.....	2,795,000	2,038,000	37.1
Salaries.....	686,000	565,000	21.4
Wages.....	2,109,000	1,473,000	43.2
Materials.....	25,629,000	12,251,000	109.2
Miscellaneous.....	3,329,000	772,000	331.2
Value of products.....	47,404,000	23,354,000	103.0
Value added by manufacture (value of products less cost of materials).....	21,775,000	11,103,000	96.1

¹ Includes 272 members of cooperative associations not reported in 1899.

In 1909 the territory of Hawaii had 500 manufacturing establishments, which gave employment to an average of 7,572 persons during the year and paid out \$2,795,000 in salaries and wages. Of the persons employed, 5,904 were wage earners. These establishments turned out products to the value of \$47,404,000, to produce which materials costing \$25,629,000 were consumed. The value added by manufacture was thus \$21,775,000, which figure best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that the manufacturing industries of Hawaii as a whole showed marked development during the decade, due at least in part to the impetus given manufacturing industries by the annexation of the territory to the United States. During this period the number of establishments increased 125.2 per cent and the average number of wage earners 61.5 per cent, while the value of products

increased 103 per cent and the value added by manufacture 96.1 per cent. As pointed out in the Introduction, it would be improper to infer that manufactures increased in volume during the period 1899-1909 to the extent indicated by these figures regarding values, since the increase shown is certainly due, in part, to the increase that has taken place in the prices of commodities.

It is a matter of interest to note that the percentages of increase shown for number of wage earners and for wages were much less than those for the number of establishments, value of products, and value added by manufacture.

The relative importance and growth of the leading manufacturing industries of the territory are shown in the next table.

¹ In 1905, however, an interesting study of the labor conditions and general industrial progress in the territory was made under the direction of the Commissioner of Labor. See Bulletin of the Bureau of Labor, No. 66, published in 1906.

INDUSTRY.	Number of establishments.	WAGE EARNERS.		VALUE OF PRODUCTS.		VALUE ADDED BY MANUFACTURE.		PER CENT OF INCREASE ¹ (1899-1909).

¹ Per cent of increase is based on figures in Table I.

² New industry since 1899.

³ Includes two important industries—foundry and machine shops, with three establishments, and fertilizers, with two establishments—for which separate figures can not be given without disclosing individual operations.

The most important industries listed in this table, where they are arranged in the order of the value of products, call for brief consideration.

Sugar.—The prosperity of Hawaii depends largely upon its sugar products. The cultivation of sugar cane in commercial quantities and the manufacture of sugar were begun about 75 years ago, and since 1875 this industry has increased rapidly and steadily. Cane sugar alone is produced, although recent experiments in growing sugar beets indicate the possibility that this industry may secure a foothold in the territory.

In 1909 the value of the sugar manufactured amounted to 75.8 per cent of the value of all manufactures of the territory. Since the sugar industry so greatly preponderates among the manufacturing industries of the islands, it exerts a powerful effect on the increase shown for all manufacturing industries combined. Exclusive of sugar, the value of the manufactures increased from \$4,099,000 in 1899 to \$11,454,000 in 1909, or 179.4 per cent.

The United States has imported nearly all of the Hawaiian sugar, a large part of which is refined after importation. The exports of sugar during the year ending June 30, 1909, were valued at \$37,632,821 and represented 93.1 per cent of the value of all exports to the United States. The exports of domestic merchandise to the United States, exclusive of sugar, were valued at \$2,762,219, and of these canned fruit amounted to \$1,229,647 and rice to \$255,312, leaving a balance of \$1,277,260 to represent the value of all other exports.

Rice, cleaning and polishing.—With the exception of some of the larger mills in and near Honolulu, this industry is carried on by the Chinese and Japanese. Practically all of the rice milled in the islands is consumed locally, being in great demand among the Chinese and Japanese, who constitute about one-half of the population. During the year ending June 30, 1909, the imports of rice products amounted to 28,197,453 pounds, valued at \$728,791, while the exports amounted

to only 5,869,759 pounds, valued at \$257,247. About 99 per cent of the imported rice came from Japan.

Canning and preserving, pineapples.—Since 1895, when this industry was first known commercially in the islands, it has shown a steady growth. It was not of enough importance, however, at the census of 1899 to be shown separately, and was included probably with food preparations. Considering the short season during which it is carried on the value of products is significant compared with the values reported for other industries. Measured by value added by manufacture this industry is second in importance, although holding third place in actual value of products.

This table shows also the percentages of increase for these leading industries in respect to value of products and value added by manufacture. The rice cleaning and polishing industry showed an increase of 237.2 per cent in value of products, while sugar showed an increase of 86.7 per cent. The canning and preserving industry is shown as a new industry.

The increase in manufacturing in Hawaii since 1899 is shown in greater detail in Table I. In practically every industry an increase is indicated in number of establishments and in value of products.

In 1909, 87 establishments were engaged in the manufacture of food preparations, 74 of these making poi, a native food obtained by baking and pounding to a thin paste the kalo or taro root, which is allowed to ferment. The articles included under "Food preparations," the number of establishments preparing them, and the value of the output of the several kinds, are shown in the following tabular statement:

PRODUCT.	Number of establishments.	Value of products.
Total.....	87	\$341,062
Poi.....	74	271,720
Soy and fish paste.....	5	9,137
Bean-curd.....	4	4,665
Macaroni.....	4	55,530

It is significant that the boot and shoe shops reported for Hawaii have an average value of products of only about \$9,000. They include a number of small establishments engaged largely in custom work, which in continental United States would be excluded from the census. They are, however, included for Hawaii, because they represent such an important part of the boot and shoe industry in the territory.

Three establishments which have commenced operations since 1899 were engaged in the manufacture of malt liquors, two in the distillation of liquors, and one in the manufacture of wine. For 1909 the total products of these six establishments amounted to more than \$300,000. Of the three establishments engaged in the manufacture of malt liquors, only one, located in Honolulu, is engaged in the manufacture of beer from malt and hops, the other two producing a Japanese drink made from rice, known as saki. One of the distilleries made a rum from molasses, and the other was engaged in the manufacture of brandy and wine from pineapples, bananas, and grapes.

A petroleum gas plant, which went into operation in Honolulu in 1905, is the only gas plant in Hawaii. Early in 1907 a company was organized to manufacture lime. Four small establishments have begun recently to extract salt from brine.

Persons engaged in manufacturing industries.—The following table shows the distribution of the average number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age in the manner already explained. (See Introduction.)

CLASS.	PERSONS ENGAGED IN MANUFACTURES.		
	Total.	Male.	Female.
All classes.....	7,572	7,046	526
Proprietors and officials.....	1,338	1,327	11
Proprietors and firm members.....	1,074	1,063	11
Salaried officers of corporations.....	24	24
Superintendents and managers.....	240	240
Clerks.....	330	317	13
Wage earners (average number).....	5,904	5,401	503
16 years of age and over.....	5,842	5,344	498
Under 16 years of age.....	62	57	5

This table shows that there were 7,572 persons returned as the average number engaged in manufactures during 1909, of whom 5,904 were wage earners, 1,338 proprietors and officials, and 330 clerks. Of the total number, 93.1 per cent were males and 6.9 per cent females. Almost all the females were wage earners, only 11 female proprietors and firm members and 13 female clerks being reported. Corresponding figures for individual industries will be found in Table II.

Of the total number of persons engaged in manufactures, 4,080, or 53.9 per cent, were in three industries,

as follows: Canning and preserving, pineapples, 853; rice, cleaning and polishing, 518; and sugar, 2,709. The sugar industry far outranks all other industries in respect to the average number of persons engaged, but owing to its seasonal character employed a less number of wage earners during the months of least activity—September, October, and November—than did the canning and preserving industry during the months of greatest activity in this industry—July, August, and September.

The following table shows the percentage of proprietors and officials, clerks, and wage earners, respectively, in the number of the persons employed in manufactures. It covers all industries combined and three important industries.

INDUSTRY.	PER CENT OF PERSONS ENGAGED IN MANUFACTURES.			
	Total.	Proprietors and officials.	Clerks.	Wage earners (average number).
All industries.....	100.0	17.7	4.4	78.0
Canning and preserving, pineapples.....	100.0	2.1	2.2	95.7
Rice, cleaning and polishing.....	100.0	69.7	3.7	26.6
Sugar.....	100.0	3.4	3.7	92.9
All other industries.....	100.0	24.8	5.5	69.7

Of the persons engaged in manufactures, 17.7 per cent were officials, 4.4 per cent clerks, and 78 per cent wage earners. In the cleaning and polishing of rice the majority of the establishments are small and the work is done to a large extent by the proprietors or their immediate representatives. Therefore the proportion of persons engaged in the industry falling in the class of proprietors and officials is very much higher than for other industries or all industries combined.

The following table shows, for 1909, in percentages, for all industries combined and for some of the important industries separately, the distribution of clerks by sex and wage earners by age periods and sex:

INDUSTRY.	CLERKS.		WAGE EARNERS.			
	Per cent.		Per cent 16 years of age and over.		Per cent under 16 years of age.	
	Male.	Female.	Male.	Female.	Male.	Female.
All industries.....	96.1	3.9	90.5	8.4	1.0	0.1
Canning and preserving, pineapples.....	89.5	10.5	69.1	30.0	0.7	0.1
Rice, cleaning and polishing.....	100.0	100.0
Sugar.....	100.0	96.5	3.4	0.1
All other industries.....	94.3	5.7	91.0	6.9	2.0	0.2

Of the clerks, 96.1 per cent were male and 3.9 per cent female. Of the wage earners, 91.5 per cent were male and 8.5 per cent female; 98.9 per cent were 16 years of age and over and but 1.1 per cent were under 16 years.

It may be noted that the largest number of women and children were employed in canning and preserv-

ing. The average number of wage earners in that industry was 564 males and 245 females 16 years of age and over and 6 males and 1 female under that age. Of the total of 503 females in all industries combined, 246 were in this industry and 86 in the sugar industry. Thus 66 per cent of the total female employees were reported by these two industries.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown in the census of 1899 it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

CLASS.	PERSONS ENGAGED IN MANUFACTURES.				
	1909		1899		Per cent of increase, 1899-1909.
	Number.	Per cent distribution.	Number.	Per cent distribution.	
Total.....	7,572	100.0	4,418	100.0	71.4
Proprietors and firm members.....	1,074	14.2	244	5.5	340.2
Salaried employees.....	594	7.8	519	11.7	14.4
Wage earners (average number).....	5,904	78.0	3,655	82.7	61.5

There were 4,418 persons engaged in manufactures in 1899 as compared with 7,572 in 1909, an apparent increase of 3,154, or 71.4 per cent. The actual increase was only 2,882, or 65.2 per cent, as 272 members of cooperative societies were reported as partners in 1909, this industrial class not being included in the census of 1899. The formation of general partnerships with from 5 to 40 partners in each accounts for the large increase in the number of proprietors and firm members, only a very few such partnerships being reported in 1899, and these with less than 10 partners in each case. Both the cooperative associations and these large general partnerships are composed of Japanese or of Chinese, one of the cooperative establishments having 200 Japanese members and another general partnership being composed of 40 Chinese.

The following table shows the average number of wage earners, distributed according to age periods and in case of those 16 years of age and over according to sex, for 1909 and 1899:

CLASS.	AVERAGE NUMBER OF WAGE EARNERS.			
	1909		1899	
	Number.	Per cent distribution.	Number.	Per cent distribution.
Total.....	5,904	100.0	3,655	100.0
16 years of age and over.....	5,842	98.9	3,630	99.3
Male.....	5,344	90.5	3,495	95.6
Female.....	498	8.4	134	3.7
Under 16 years of age.....	62	1.0	25	0.7

This table indicates that for all industries combined there was an increase of 364, or 271.6 per cent, in the number of adult female wage earners, the number having increased from 134 in 1899 to 498 in 1909, and an increase of 37, or 148 per cent, in the number of children employed. In 1909, 8.4 per cent of the total number of wage earners 16 years of age and over were women, while in 1899 only 3.7 per cent were women.

Wage earners employed, by months.—The following table gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined, for canning and preserving pineapples, for sugar, and for all other industries; it also gives the percentage which the number each month is of the greatest number employed in any one month.

MONTH.	WAGE EARNERS.							
	All industries.		Canning and preserving, pineapples.		Sugar.		All other industries.	
	Number.	Per cent of maximum.	Number.	Per cent of maximum.	Number.	Per cent of maximum.	Number.	Per cent of maximum.
January.....	5,927	81.3	364	18.7	3,217	91.7	2,346	86.8
February.....	6,089	83.5	305	15.7	3,479	99.2	2,302	85.2
March.....	6,041	82.8	427	22.0	3,280	93.5	2,334	86.3
April.....	6,509	89.3	464	23.9	3,508	100.0	2,537	93.8
May.....	6,457	88.5	458	25.1	3,328	94.9	2,641	97.7
June.....	6,608	90.6	810	41.7	3,134	89.3	2,664	98.6
July.....	7,292	100.0	1,689	86.8	2,948	84.0	2,668	98.3
August.....	6,324	86.7	1,943	100.0	1,764	50.3	2,617	96.8
September.....	6,726	78.5	1,587	81.7	1,448	41.3	2,691	99.6
October.....	4,345	59.6	721	37.1	970	27.6	2,654	98.2
November.....	4,214	57.8	520	27.1	994	28.3	2,694	99.7
December.....	5,326	73.0	477	24.5	2,146	61.2	2,703	100.0

The two industries, canning and preserving, pineapples, and sugar, which are seasonal industries, the former giving employment to an unusually large number of persons during July, August, and September, and the latter during the months from January to July, inclusive, affect greatly the total for all industries combined. They thus not only make the month of July the month of greatest employment, but also magnify the irregularity of employment throughout the year. The variation by months in employment in these two industries depends on the seasons in which the raw materials mature. Outside these two industries the number of wage earners employed underwent but little change from month to month, the numbers showing a general increase from February to the end of the year.

Prevailing hours of labor.—Establishments have been classified also according to the prevailing number of hours of labor of the bulk of their employees; that is to say, the wage earners of each establishment are all classified according to the prevailing hours of labor in the establishment, even though some may have to work a different number of hours. The table that follows shows the result of this classification. It is based on the average number of wage

earnings employed during the year. In the cases of canning and preserving, pineapples, and of sugar this average is far less than the number employed in the busy season.

INDUSTRY.	AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS GROUPED ACCORDING TO PREVAILING HOURS OF WORK PER WEEK.								
	Total.	48 and under.	Between 48 and 54.	54.	Between 54 and 60.	60.	Between 60 and 72.	72.	Over 72.
All industries.....	5,904	190	839	825	580	865	892	1,394	319
Bread and other bakery products.....	107	14	1	17	7	34	9	25	
Canning and preserving, pineapples.....	816			310	235	271			
Coffee, cleaning and polishing.....	71	3		4	64				
Copper, tin, and sheet-iron products.....	80	11		12	55	2			
Food preparations.....	172	61	3	8	70	25	5		
Lumber and timber products.....	254	32	16	15	181	10			
Printing and publishing.....	319	36	156	84	7	36			
Rice, cleaning and polishing.....	188		11	27	1	61	22	16	
Slaughtering and meat packing.....	37	9		18	3	4	3		
Sugar.....	2,517					115	779	1,348	275
All other industries.....	1,393	24	652	330	153	172	27	16	19

It is evident from these figures that for nearly half the total number of wage earners employed in the manufacturing industries of Hawaii the prevailing hours of labor per week are over 60, or an average of over 10 hours per day. The figures for all industries combined are affected, however, to a large extent by the long hours reported in the sugar industry. In this industry all of the employees were engaged 60 or more hours per week, and about two-thirds were engaged 72 hours and over. Exclusive of those engaged in the sugar industry, almost two-thirds of the wage earners were employed from 54 to 60 hours, inclusive, per week, 5.6 per cent were employed 48 hours or less per week, and 6 per cent were employed more than 60 hours per week.

Location of establishments.—The next table shows the extent to which manufacturing in the territory is centralized in the one city, Honolulu. In 1909, 22.6 per cent of the total value of products was made in this city and 41.2 per cent of the average number of wage earners were employed there. The figures indicate that since 1899 there has been a more rapid increase in Honolulu than in the districts outside. The relatively large number of establishments in Honolulu was due, however, to the fact that in this city were found many of the poi shops, bakeries, tin shops, and less important industries. While there was a large number of these concerns, they were all small establishments. Indeed, the combined value of products of 226 of the 236 establishments reported from Honolulu amounted to about \$4,980,000, while the value of products of the remaining 10 establishments, of which 3 were foundry and machine shops, 3 pineapple canneries, 3 fertilizer factories, and 1 a sugar mill, approximated \$5,700,000. The other sugar mills were located on the plantations or farms in the rural districts.

The statistics for the principal manufacturing industries in the territory and of the city of Honolulu are presented for 1909 and 1899 in Table I.

ITEM.	Year.	Total.	LOCATION OF ESTABLISHMENTS.		PER CENT OF TOTAL.	
			Honolulu.	Outside districts.	Honolulu.	Outside districts.
Population.....	1910	191,009	52,183	139,726	27.2	72.8
	1899	154,001	39,306	114,695	25.5	74.5
Number of establishments.....	1909	500	236	264	47.2	52.8
	1899	222	53	169	23.9	76.1
Average number of wage earners.....	1909	5,904	2,432	3,472	41.2	58.8
	1899	3,655	929	2,726	25.4	74.6
Value of products.....	1909	\$47,403,880	\$10,704,744	\$36,699,136	22.6	77.4
	1899	23,353,665	3,264,574	20,089,091	14.0	86.0
Value added by manufacture.....	1909	21,774,571	4,335,520	17,439,051	19.9	80.1
	1899	11,102,764	1,293,339	9,809,425	11.6	88.4

Character of ownership.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises in 1909 and 1899, respectively.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 28 per cent of the total number of establishments had in 1909 a corporate form of organization, as against 72 per cent for all other forms. The corresponding figures for 1899 were 32.4 per cent and 67.6 per cent, respectively. For all industries combined, as measured by value of products and value added by manufacture, corporations show a slight increase in relative importance, as they operated establishments whose value of products formed 92.2 per cent of the total for all establishments in 1899 and 92.8 per cent in 1909, while the value added by manufacture formed 93.4 per cent of the total in 1899 and 94 per cent in 1909.

Corporation.....	93.5	97.9	98.7	99.0

¹ Includes the group "Individual," to avoid disclosure of individual operations.

The establishments conducted by individuals and partners were confined to the smaller and less important industries. Considering the three most important manufacturing industries of the islands, all of the canning establishments and 43 of the 46 sugar mills were under corporate ownership, while only 6 of the 74 rice mills belonged to this class. These 6 rice mills, however, reported 49.4 per cent of the total value of rice products. The incorporated companies in the three specified industries reported products to the amount of \$38,166,805, or 86.8 per cent of the total value of products reported by all incorporated companies engaged in manufactures.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it, the following table groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries and for important industries separately as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the

last two censuses, while for certain important industries figures are given for 1909 only.

INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.
ALL INDUSTRIES:				
1909.....	500	5,904	\$47,403,880	\$21,774,571

¹ Includes the group "Less than \$5,000."

This table shows that, in 1909, of the 500 establishments, only 12, or 2.4 per cent, had a value of products exceeding \$1,000,000. These establishments, however, notwithstanding their small number, had a total average number of wage earners of 1,336, or 22.6 per cent of the total number in all establishments; and the importance of their operations, as measured by value of products, was 46.6 per cent of the total and by value added by manufacture 51.6 per cent of the total.

On the other hand, small establishments—that is, those having a value of products of less than \$5,000—constituted a very considerable proportion (51 per cent) of the total number of establishments, but the value of their products amounted to only 1.2 per cent of the total. The great bulk of the manufacturing was carried on in establishments having products valued at not less than \$100,000.

The fact that the average number of wage earners per establishment decreased from 16 to 12, the value of products from \$105,197 to \$94,808, and the value added by manufacture from \$50,012 to \$43,549, can scarcely be taken as an indication of a change in the tendency away from concentration. It may be due to a more thorough canvass of the small establishments at the census of 1909 or to an increase in the number of small establishments in the less important industries measured by value of products, such as bread and other bakery products and food preparations.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the average number of wage earners employed. The next table shows such a classification for all industries combined and for three important industries, and gives not only the number of establishments falling in each group but also the average number of wage earners employed.

This table shows classes in considerable detail. Consolidating these classes to a certain extent it will be seen that 67.2 per cent of the establishments employed under 21 persons each, and 18.6 per cent employed no wage earners. The most numerous single group consists of the 256 establishments employing under 6 wage earners, the next being the group employing from 6 to 20, with 80 establishments. There were 14 establishments that employed over 100 wage earners; 2 employed over 250.

Of the total number of wage earners, 38.3 per cent were in establishments employing over 100 wage earners. The single group having the largest number of employees was the group employing from 101 to 250 wage earners. This group employed 1,670 wage earners, or 28.3 per cent of the total. The next most numerous group was that employing from 21 to 50 wage earners, with 1,396 wage earners, or 23.6 per cent of the total.

The sugar and the canning and preserving industries listed in this table are industries in which comparatively large establishments do most of the business, as appears from the classification of the wage earners. On the other hand, 71.7 per cent of the wage earners engaged in the cleaning and polishing of rice were in establishments employing under 6 wage earners, and the remaining 28.3 per cent in this industry were in establishments employing from 6 to 20 wage earners.

INDUSTRY.	Total.	ESTABLISHMENTS EMPLOYING—						
		No wage earners.	Under 6 wage earners.	6 to 20 wage earners.	21 to 50 wage earners.	51 to 100 wage earners.	101 to 250 wage earners.	251 to 500 wage earners.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest, however, can be brought out concerning the relative importance of the different classes of expenses going to make up the total.

The following table shows, in percentages, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II.

INDUSTRY.	PER CENT OF TOTAL EXPENSES REPORTED.			
	Salaries.	Wages.	Materials.	Miscellaneous expenses.
All industries.....	2.2	6.6	80.7	10.5
Canning and preserving, pineapples.....	3.5	13.1	89.6	13.8
Rice, cleaning and polishing.....	0.7	2.1	94.6	2.7
Sugar.....	1.2	3.5	84.1	11.1
All other industries.....	5.4	10.7	68.2	9.7

This table shows that, for all industries combined, 80.7 per cent of total expenses were incurred for materials. An unusual condition is found in Hawaii in the fact that the miscellaneous expenses form a larger proportion of the total expenses than do the salaries and wages combined. The large amount reported for miscellaneous expenses is due partly to the generally high taxes prevailing in Hawaii and also to the large amount reported in the sugar industry under the general head of "Rent of offices and buildings, rent of machinery, royalties, use of patents, insurance, ordinary repairs of buildings and machinery, advertising, traveling, and other sundry expenses." In addition to a general property tax of 1 per cent on the full value of real and personal property and a general income tax of 2 per cent on incomes of over \$1,500, a special income tax on the net profits or incomes above \$4,000 went into effect beginning with the year 1909.

Engines and power.—The next table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909 and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

The table indicates that the increase in primary power was largely in power generated by steam. The more general use of gas engines is shown, the number of such engines being 87 in 1909, as against 10 in 1899, and the horsepower showing even a larger increase,

being 1,117 in 1909, as against 79 in 1899. There were 228 establishments reported as using power in 1909, as compared with 124 in 1899. In 1909 the average horsepower per establishment using horsepower was 183.9, as compared with 158 in 1899. Comparatively little water power was used, and this almost entirely in the rice and the sugar mills, which were located on the various plantations where mountain streams were available for water power. The figures also show that the practice of renting power is on the increase, the number of motors using rented power being 99 in 1909, as against 18 in 1899. The use of electric motors for the purpose of applying power generated within the establishment is shown to be increasing rapidly, the horsepower of such motors increasing from 299 in 1899 to 1,242 in 1909.

POWER.	NUMBER OF ENGINES OR MOTORS.		HORSEPOWER.		PER CENT DISTRIBUTION OF HORSEPOWER.

¹ Not reported.

² Less than one-tenth of 1 per cent.

Fuel.—Closely related to the question of kind of power employed is that of fuel used in generating this power, or otherwise as material in the manufacturing processes. As the Hawaiian Islands have practically no mineral resources, all mineral fuel must be procured elsewhere, principally from the United States. In the sugar-mill industry a large amount of fuel is required, and the refuse from the sugar cane has almost entirely supplied the necessary fuel. The following table shows the quantity of each kind of fuel used by the establishments canvassed in 1909:

INDUSTRY.	Anthracite coal (tons).	Bituminous coal (tons).	Coke (tons).	Wood (cords).	Oil, including gasoline (barrels).	\$ (100)
All industries.....	1,222	4,747	720	14,570	272,392	1,120
Canning and preserving, pineapples.....	212	222	6,302
Rice, cleaning and polishing.....	218	155	120	2,733	650
Sugar.....	419	3,719	10,957	214,365
All other industries.....	585	661	720	3,271	48,992	3,470

NOTE.—In addition, there were 130 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and value of materials and products which do not appear on the general schedule. Data for the quantity and value of products for two important industries in Hawaii are here presented.

Canning and preserving, pineapples.—Canning and preserving, though a comparatively new factory industry, had a value of products in 1909 amounting to \$1,591,073. The first shipment of preserved pineapples from Hawaii was made in 1895, the exports for that year amounting to 468 cases, valued at \$972. By 1899 the value of the exports had increased to \$3,948. Soon after the annexation of the islands to the United States in 1898 a more rapid development is shown. In the year last named a company was organized for the growing and canning of pineapples, and in 1903 its first crop of any considerable size was gathered. Meanwhile other companies had come into existence, and by 1904 fruit canneries were established in Wahiawa on Oahu, on Maui, and in Hilo and Kona on the island of Hawaii. In that year the value of canned fruit exported to the United States was \$32,349; in 1905, \$66,876; in 1906, \$152,582; in 1907, \$267,629; in 1908, \$632,277; and in 1909, \$1,229,647. The exports of canned fruit consisted almost entirely of canned pineapples, as very little other fruit was canned.

The following tabular statement gives the number of cases put up during 1909:

SIZE OF CAN.	Number of cases.
1-pound cans.....	22,192
2-pound cans.....	108,902
3-pound cans.....	265,600
Gallon cans.....	42,608

Rice, cleaning and polishing.—The following statement shows the number of establishments engaged in merchant and custom milling, respectively, and in both kinds of milling, together with the value of products of the several classes of establishments in 1909.

Total number of mills.....	74
Merchant.....	35
Custom.....	7
Merchant and custom.....	32
Total value of products.....	\$2,238,667
Merchant milled.....	1,354,267
Custom milled.....	884,400
Value of toll received.....	61,154

The cleaning and polishing of rice ranks second in importance among the manufacturing industries of the Hawaiian Islands, being exceeded only by the manufacture of cane sugar.

Of the 74 mills reported, 35, with products valued at \$1,032,904, are classified as merchant mills; 7, with products valued at \$737,848, as custom mills; and 32, with products valued at \$467,915, as both merchant and custom.

The amount of toll received for custom-treated rice was returned as \$61,154, indicating an average toll rate equivalent to about one-fourth of a cent per pound.

The total quantity of rough rice milled in 1909, distributed according to domestic and foreign growth, and the kind, quantity, and value of products manufactured therefrom are shown in the following tabular statement:

CLASS.	ROUGH RICE MILLED AND RICE PRODUCTS.	
	Quantity (pounds).	Value.
Rough rice, milled.....	62,768,070	(1)
Domestic.....	34,019,055	(1)
Foreign.....	28,749,015	(1)
Rice products, aggregate.....	(1)	\$2,238,667
Clean, total.....	51,967,465	2,122,516
Whole.....	51,381,561	2,122,516
Broken.....	585,904	11,641
Polish.....	10,146	92
Bran.....	6,415,232	67,689
Hulls and waste.....	134,089	134
All other.....	(1)	36,595

¹ Not reported.

The total quantity of rice milled was 62,768,070 pounds, of which only 54.2 per cent was of domestic growth, while 45.8 per cent was of foreign growth. The total quantity of clean rice obtained amounted to 51,967,465 pounds, of which 51,381,561 pounds, valued at \$2,122,516, was classed as whole rice, and 585,904 pounds, valued at \$11,641, as broken rice.

The average quantity of clean rice milled per establishment in 1909 was 702,263 pounds, compared with 365,879 in 1899, an increase of 91.9 per cent. The average value of products per establishment in 1909 was \$30,252, compared with \$16,202 in 1899, an increase of 86.7 per cent. In 1909, 6 establishments reported a value of products of over \$100,000 each; 15, between \$20,000 and \$100,000; 19, between \$5,000 and \$20,000; and 34, less than \$5,000. In 1899 the establishments were generally smaller, and only one establishment reported a value of products of more than \$100,000.

Laundries.—Statistics for steam laundries are not included in the general tables. There were four such establishments in the territory of Hawaii, three of which were in Honolulu.

The following statement summarizes the statistics:

Number of establishments.....	4
Persons engaged in the industry.....	88
Proprietors and firm members.....	4
Salaried employees.....	2
Wage earners (average number).....	82
Primary horsepower.....	65
<hr/>	
Capital.....	\$75,355
Expenses.....	34,087
Services.....	24,987
Materials.....	6,613
Miscellaneous.....	2,487
Amount received for work done.....	52,409

One laundry was operated by a corporation, one by a limited partnership, and two by individuals. Two of the establishments reported over \$5,000 but less than \$100,000 as receipts for the year and two less than \$5,000.

The number of wage earners employed each month and the per cent which this number represented of the greatest number employed in any month are shown in the following table:

MONTH.	WAGE EARNERS.		MONTH.	WAGE EARNERS.	
	Number.	Per cent of maximum.		Number.	Per cent of maximum.
January.....	79	76.7	July.....	74	71.8
February.....	77	74.8	August.....	80	77.7
March.....	79	76.7	September.....	78	75.7
April.....	82	79.6	October.....	78	75.7
May.....	88	85.4	November.....	87	84.5
June.....	82	79.6	December.....	103	100.0

The different kinds of primary power, the number of engines, and the horsepower used in manufactures in 1909 are shown in the following tabular statement:

KIND.	Number of engines.	Horse-power.
Primary power, total.....		65
Owned:		
Steam.....	3	55
Gas.....	1	5
Rented—Electric.....	1	5

The kind and amount of fuel used are shown in the following statement:

KIND.	Unit.	Quantity.
Anthracite coal.....	Tons.....	36
Bituminous coal.....	Tons.....	15
Wood.....	Cords.....	31
Oil.....	Barrels.....	103
Gas.....	1,000 feet.....	558

MANUFACTURES.
