REPORT OF ACTIVITIES IN CENSUS TRACT CITIES

The Committee on Census Enumeration Areas of the American Statistical Association was established in 1932. Since that time it has worked with city people throughout the country both in establishing their cities as tract cities and in assisting them in promoting the use of tracts. Since the committee work is all voluntary and there is no travel allowance, it has been difficult to keep in touch with the work in each city.

In November 1944, a questionnaire was addressed to each Key Person to obtain basic information about the use of census tracts and their promotion in each city. Half the questionnaires were returned promptly while the rest straggled in over a six-month period. Some Census Tract Key Persons were found to no longer be in the city and it was necessary to fill these vacancies before the questionnaires could be obtained.

The essential facts about each city are presented in Table I and elaborated in succeeding tables.

The census tract idea was conceived by the late Doctor Walter Laidlaw in New York City more than 40 years ago. The Bureau of the Census in 1910 established census tracts for each of the 8 cities having 500,000 or more inhabitants at that time. In 1926, Cleveland and Chicago became interested in data by census tracts.

As the 1930 census date approached, other cities became interested in knowing where their population lived and under what conditions and 10 new cities, making 18 in all, were laid out in census tracts and approved by the Bureau of the Census prior to the 1930 census. During the succeeding decade, an effort was made to establish census tracts in all cities of a quarter of million inhabitants or more. Interest also developed in some smaller cities.

Prior to the 1940 census 61 cities, including Honolulu, were laid out in census tracts. The date of the first census taken on a tract basis is shown for each city in Table I. Akron, Memphis, New Haven, and Providence which were not tracted until the 1940 census have obtained from the Bureau of the Census special tabulations of selected data by tracts for 1930.

The 61 cities range in population from Macon, Ga., with 57,865 to New York City with 7,454,995. With the exception of San Antonio, Texas, all cities of 250,000 or more inhabitants were tracted for the 1940 census. It is not considered advisable to tract small cities, and only 6 of the present tract cities have fewer than 100,000 inhabitants.

Twenty-six cities including Honolulu have laid out tracts in adjacent suburban areas. In some instances these represent a part or all of the balance of the county; in other instances they include the entire metropolitan district. The Key Person in nearly every large city reported that he felt it desirable to have the entire metropolitan district tracted, but it is not now known how many cities will actually accomplish this in time for the 1950 census.
The Committee on Census Enumeration Areas has maintained a Key Person in each city to coordinate and promote the use of census tracts. Because census tracts have applications in every field of interest, the Key Persons are almost evenly divided among welfare organizations, universities, business interests, and city agencies. There is no apparent difference in the efficiency of the Key Person according to affiliation although it is almost inevitable that his efforts are concentrated within his own field of interest.

Because no one person is in close daily contact with all the interest groups of a city, every Key Person is urged to establish a Census Tract Committee whose members represent the various interests. The very acceptance of committee membership may also serve to develop an interest where none existed before.

Less than a fourth of the cities have established such committees. Nearly all of the Key Persons appointed during the past year have indicated that they are now forming committees which, of course, are not listed here.

Two-thirds of the tracted cities have available both a census tract street map or census tract outline map and a census tract street index. Only nine cities reported that they had neither. If a city has any kind of map available for distribution and any kind of a tract index, it is so recorded in Table I. A subsequent table gives more detail for each city.

The types of principal users reported in the questionnaires are shown in Table I with some misgivings. It should be emphasized that the lack of an "x" in any given column does not necessarily mean that no use is being made of census tracts by the particular interest group. It merely means that the Key Person in listing the principal users did not include users in this category.

---

Miss Esther M. Wright of the Vital Statistics Division of the U.S. Bureau of the Census has been of real assistance in the analysis of the questionnaires and the preparation of this report. Replies have been checked with other published data, with the replies received in the 1937 study, and with the Census Tract Library maintained in Cleveland. The information is, of course, more complete for some cities than for others and a faithful reproduction of everything at hand may tend to do an apparent injustice to the remainder of the cities. There are no doubt also errors in interpretation as well as recording which various Key Persons may wish to correct.
Table I

CENSUS TRACT KEY PERSONS

The Committee has maintained a Census Tract Key Person in each tract city to coordinate and promote the use of census tracts locally. Many of the same persons have served both loyally and efficiently for many years. The wide use being made of census tracts in their cities is evidence of this fact. Displacements and the pressure of work occasioned by the war, however, have held back the development of the use of census tracts in some cities. About a third of the Key Persons are new to this position, having replaced former Key Persons only within the last year or so and others only within the past few months.

The Key Person should be a leader in his community, capable of promoting the use of census tracts and actively engaged in work involving the use of census tracts and census tract data. He should be a "live wire", have community-wide interests, and be in touch with city agencies, civic and welfare organizations, university research people, and the business interests of the city. He should be aware of the available statistical information about his city and have some knowledge of the needs for various types of data as well as the statistical techniques by which these needs can be met.

At the present time, 16 of the Census Tract Key Persons are associated with Councils of Social Agencies or other welfare organizations, 14 with universities, 12 with City Planning Commissions, 10 with Chambers of Commerce or private business enterprises, and 5 with various municipal departments. There are 4 vacancies. A list of Key Persons is shown below:

LOCAL CENSUS TRACT COMMITTEES

Every Key Person is urged to create a Census Tract Committee for his city. The committee should include:

1. A member of the American Statistical Association
2. A member of the American Marketing Association
3. The business manager of a local newspaper
4. A public utility man
5. A member of the Real Estate Board
6. The Secretary or Research Director of the Chamber of Commerce or Board of Trade
7. The Chief Engineer of the Planning Commission
8. The Health Commissioner or the Registrar of Vital Statistics of the City Health Department
9. The Director of the Public Housing Authority
10. The Executive Secretary or Research Director of the Council of Social Agencies
11. The Chief Librarian
12. A professor of sociology from a local college or university
13. A representative churchman
14. The superintendent of schools
15. The president of a local bank
16. Others

The local committee should give consideration to ways and means of promoting an understanding of the use of census tracts within the community. Its members should assume primary responsibility for developing census tract uses among the group of interests each represents and should serve as a clearing house for the exchange of ideas among the several interests within the city. The Key Person should serve the committee as Chairman or Secretary. The Committee need not meet more than once or twice a year.

Fourteen cities have established such special committees. In 5 cities the research committee of the organization with which the Key Person is affiliated is used. Three Key Persons call special meetings of all interested persons from time to time. In Baltimore last year, for example, 45 persons representing 19 organizations and business firms devoted an entire afternoon to the consideration of tract use. Most of the new Key Persons are now organizing committees.

The names of committee members in the 14 cities are given below:

List of Local Census Tract Committees

Akron:

*Dr. H. O. DeGraff
Department of Sociology
University of Akron

E. J. Larrick
Secretary
United War Chest

University of Rochester

The Research Divisions of the Council of Social Agencies act as advisory committees to the Key Persons in Hartford, Houston, Nashville, and Washington, D.C.

The Research Committee of the Chamber of Commerce acts as an advisory committee to the Key Person in Los Angeles.

Special meetings of organizations and business firms using census tracts are called from time to time in Baltimore, Berkeley, and Cleveland.

*1 Census Tract Key Person
CENSUS TRACT MAPS AND CENSUS TRACT STREET INDEXES

Adequate maps showing census tract boundaries and conveniently arranged census tract street indexes are vital to the successful promotion of the use of census tracts in any community.

Two kinds of maps should be readily available: a map showing all streets and the tract boundaries, and an outline map suitable for spotting statistical data.

A detailed street map is required by any agency which covers the city or any part of the city on an address basis. Thus, such a map is required by the Community Fund in laying out its campaign areas, the Visiting Nurse Association for its administrative districts, the tax assessor's office in the work of evaluating individual pieces of property, and the Chamber of Commerce in locating business sites.

Outline maps are equally important because it is only by their use that an agency can present its facts visually for study and demonstration. These may include, for example, the success of fund collections by area, distribution of services rendered, trends in property values by area, distribution of sales, or more general related information such as increases and decreases of population by area and distribution of population by economic status, race, age, education, and so forth.

Not only are such maps essential to show the geographical distribution of such items but they are equally necessary in portraying visually the relationship between items such as fund collections and economic status of the total population, nursing service rendered by type of population, retail sales by economic status, juvenile delinquency by nativity of parents, or any of a thousand and one phenomena under study by the civic, social, and business interests in every city.

Census tract street indexes are of assistance to any agency allocating its records geographically by tracts. These include nurses’ visits, persons attending a specific hospital, place of residence of customers, active savings accounts, births, deaths, residence of juvenile delinquents, and thousands of other items.

Of the 56 cities from which information was received, 41 have available some kind of map and 44 have compiled some form of census tract street index. Only 38 cities have both maps and a street index; 3 have a map but no index; 6 have an index but no map; and 9 have neither.

Following is a summary of the reports submitted by Key Persons. The list of maps available for each city is not complete inasmuch as the questionnaire asked only whether the city had a published map showing all streets and census tract boundaries. It should also be noted that several cities which have published only outline maps indicated that the office of the Key Person marks tract boundaries on an adequate street map upon request.

No attempt has been made to differentiate between printed and mimeographed street indexes but all are considered "published" since they are available in quantity regardless of form. Of the 44 cities which have developed a Street index, 40 have published them but 5 of these are now out of print. Thus it may be said that in only 35 cities are census tract street indexes readily available for day-to-day use.

</table>
CENSUS TRACT USERS

The analysis of the questionnaires submitted indicates that the principal users of census tracts and census tract data may be roughly divided into three types. A record collecting agency, such as the Vital Statistics Office, may allocate births, deaths, and cases of communicable diseases by tracts for both administrative and research purposes. The Chamber of Commerce, on the other hand, may not collect any data itself but may use Census data and data developed locally by tracts in preparing market analyses of sections of the city.

Finally, an agency may not be interested in analytical research but find tracts useful in a more or less purely administrative way. The Community Fund, for example, may establish its campaign areas on a tract basis in order to have accurate information on population and families in each area, but its interest in tracts as such may not go beyond this point.

The questionnaire mailed to Key Persons last year asked for the five principal users of census tracts, the five principal users of census tract publications, and the five principal users of the block data publications. Many Key Persons in answering did not attempt to differentiate between agencies actually using tracts and those using only tract data published by the United States Bureau of the Census and by local agencies. Others felt the list of the five principal users would be the same in any case. Several Key Persons indicated that it was impossible to select the five principal users from the many agencies and business firms using tracts in their cities and therefore answered these questions by listing categories of users, such as "city agencies," "welfare agencies," "real estate firms," and so forth.

Under these circumstances, it does not seem practical to present a list of users in each city. There is attached, however, a list of all the specific agencies and organizations mentioned together with the number of times each was mentioned by the 56 cities from which information was received.
