APPENDIX II

Metropolitan Area Concepts and Components

Statistics for metropolitan areas shown in the *Statistical Abstract* represent areas designated by the U.S. Office of Federal Statistical Policy and Standards (OFSPS) as standard metropolitan statistical areas (SMSA's). Definitions of the SMSA's in terms of their geographic components are presented in Office of Management and Budget (OMB), *Standard Metropolitan Statistical Areas*, 1975, Revised Edition. (OFSPS) issues amendments to update this publication when changes in SMSA definitions are made. See also U.S. National Bureau of Standards, *Metropolitan Statistical Areas*, Federal Information Processing Standards Publication (FIPS Pub. 8-4, June 30, 1974).

The complete list of areas, their components, and population totals, which follows tables A, B, and C below (see p. 938) is based on the SMSA definitions in effect on Dec. 31, 1977. On that date, there were 281 SMSA's (including 4 in Puerto Rico).

The general concept of a metropolitan area is one of an integrated economic and social unit with a large population nucleus. Standard definitions of metropolitan statistical areas were first issued by the then Bureau of the Budget (predecessor of OMB) in 1949, under the designation "Standard Metropolitan Areas"; the present designation was adopted in 1959. In October 1977 the Office of Federal Statistical Policy and Standards was transferred to the U.S. Department of Commerce.

The criteria for the establishment and definition of SMSA's have undergone several modifications since 1949. The current criteria were adopted in March 1976; they provide that each SMSA must include at least:

- (a) One city with 50,000 or more inhabitants, or
- (b) A city with at least 25,000 inhabitants, which, together with contiguous places (incorporated or unincorporated) having population densities of at least 1,000 persons per square mile, has a combined population of 50,000 and constitutes for general economic and social purposes a single community, provided that the county or counties in which the city and contiguous places are located has a total population of at least 75,000. (In New England, the cities and towns qualifying for inclusion in an SMSA must have a total population of at least 75,000.)

In addition to the central city or cities, the criteria provide that the SMSA include the county in which the central city is located, and adjacent counties that are determined to be metropolitan in character and economically and socially integrated with the county of the central city, according to specific rules. (In New England, as noted below, the units comprising the area are cities and towns rather than counties.) The largest city in each SMSA is designated a "central city"; in addition, there may be up to two additional central cities if certain criteria are met. With two exceptions (Nassau-Suffolk, N.Y. and Northeast Pennsylvania), the title of each SMSA includes the names of its central city or cities. An SMSA may include other cities of 50,000 or more besides its central city, and may include territory in more than one State.

Recent previous editions (1967-1975) of the *Statistical Abstract* have included a section entitled "Metropolitan Area Statistics," which presented numerous items of statistical information for SMSA's. That section was omitted beginning with the 1976 edition. In its place, a much more comprehensive *State and Metropolitan Area Data Book* will be issued on a biennial basis; the first issue is scheduled for release in 1979.

New England SMSA's and NECMA's. Because SMSA's in New England are defined in terms of cities and towns, rather than counties, some statistical data that are available only for counties cannot be compiled for individual New England SMSA's. Therefore, for New England areas data are shown for both New England County Metropolitan Areas (NECMA's) and SMSA's wherever possible. The NECMA's provide a county

version of the New England areas defined following criteria adopted by OMB in March 1976 which are identical to those used to define SMSA's in the other States. NECMA's do not replace New England SMSA's as the standard areas.

Standard Consolidated Statistical Areas.—Standard consolidated statistical areas (SCSA's), defined under criteria adopted by OMB in August 1975, include two or more contiguous SMSA's which meet certain criteria of size, urban character, integration, and contiguity of urbanized areas.

Effect of changes in SMSA definitions.—Changes in the definitions of SMSA's since 1949 have included the recognition of new areas as, for example, cities reached 50,000 population, and large counties (or towns in New England) were added to existing SMSA's. Also, several formerly separate SMSA's have been merged, and occasionally territory has been transferred from one SMSA to another or (in rare instances) from an SMSA to nonmetropolitan territory. Comparisons of SMSA figures over time may be affected in cases where the SMSA definitions were changed. To maintain comparability, data for an earlier period have been revised in this volume, where possible, to reflect the SMSA boundaries of the more recent period. However, this could not always be done. For data based on a sample survey, in particular, it is usually not possible to reflect changes in SMSA definitions that occurred after the survey was made.

In the three tables that follow, data are given for SMSA's as defined for specified dates, thereby indicating the extent of change in population and land area resulting from revisions in definitions.

TABLE A. NUMBER, POPULATION, AND LAND AREA OF SMSA'S AS DEFINED AT SPECIFIED DATES: 1940 TO 1976

[The differences in population shown here for each year in the successive columns of the table result entirely from net expansion of metropolitan territory through changes in the SMSA definitions. The differences in population shown for each SMSA definition (on the successive lines of the table) result entirely from population changes within that territory; unaffected by changes in SMSA definitions. The changes in 1970 land area result entirely from net expansion of SMSA territory. All data include Alaska and Hawaii and exclude Puerto Rico. Subtraction of any line of the table from the line below will show the net effect of change in population and land area undergone by the SMSA's as the result of changes in definitions between the specified dates. Such changes typically occurred throughout the period, not on any single date, and may have included subtractions from, as well as additions to, SMSA territory. Census population data do not include corrections made since publication; therefore, data will not strictly agree with those shown in other tables of this *Abstract*. The area data for the 1950 and 1960 census definitions of SMSA's differ from the data published in those censuses because they are based on a remeasurement of land areas made during the 1960's, and also reflect changes in inland water area occurring up to 1970.]

SMSA DEFINITION AS OF—	Number of SMSA's	POPULATION (1,000)					Land area, 1970 (1,000 sq. mi.)	
		1940, Apr. 1	1950, Apr. 1	1960, Apr. 1	1970, Apr. 1	1975, July 1		1976, July 1

1964 (Aug. 31) ⁵	217	74,869	91,644	115,876	134,639	139,005	139,826	350
1968 (Jan. 31) ⁶	230	76,408	93,630	118,410	137,915	142,728	143,623	378
1970 census (Feb. 28, 1971) ..	243	77,155	94,579	⁷ 119,593	⁸ 139,419	144,373	145,291	⁹ 388
1974 (Apr. 30) ¹⁰	265	¹¹ 82,038	¹² 100,220	¹³ 126,614	148,132	154,214	155,295	491
1977 (Dec. 31).....	277	82,805	101,109	127,675	149,414	155,651	156,754	510

¹ Corresponds to total 1940 population for 1950 SMSA's published in 1950 census (69,279,675), with addition of Honolulu SMSA, and corrected by subtracting population (3,194) of Colonial Heights town erroneously included in Richmond SMSA.

² Corresponds to total SMSA population for 1950 published in 1950 census (84,500,680), plus Honolulu SMSA.

³ Corresponds to total 1940 population for 1960 SMSA's published in 1960 census (72,834,468), corrected by adding population (13,277) erroneously omitted from Stamford SMSA (remainder of Stamford town), and subtracting population (3,194) of Colonial Heights town erroneously included in Richmond SMSA.

⁴ Corresponds to total SMSA population for 1960 published in 1960 census (112,885,178), corrected by subtracting population (39) erroneously included in Franklin County, Ohio (Columbus SMSA).

⁵ SMSA's as defined for the 1963 economic censuses. ⁶ SMSA's as defined for the 1967 economic censuses.

⁷ Corresponds to total 1960 population for 1970 SMSA's published in 1970 census (119,594,754), corrected by subtracting 1,256 population from Lawrence-Haverhill SMSA; this represented an addition to the 1960 population of Andover town made subsequent to the original census tabulations, and therefore not reflected in State or national totals. ⁸ Corresponds to total SMSA population for 1970 published in 1970 census.

⁹ Corresponds to total SMSA land area published in 1970 census (387,616 square miles), corrected by subtracting 15 square miles erroneously included in Roanoke SMSA and 3 square miles included due to erroneous addition of area data. ¹⁰ SMSA's as defined for the 1972 economic censuses.

¹¹ Includes estimated 1939 population (4,429) of Anchorage Census Division, as defined in 1970.

¹² Includes estimated 1950 population (32,060) of Anchorage Census Division, as defined in 1970.

¹³ Includes 1960 population (82,833) of Anchorage Census Division, as defined in 1970.

APPENDIX III

Statistical Methodology and Reliability

Introduction.—The data presented in this *Statistical Abstract* came from many sources. The sources include not only Federal statistical bureaus and other organizations that collect and issue statistics as their principal activity, but also governmental administrative and regulatory agencies, private research bodies, trade associations, insurance companies, health associations, and private organizations such as the American Red Cross and philanthropic foundations. Consequently, the data vary considerably as to reference periods, definitions of terms, and, for ongoing series, the number and frequency of time periods for which data are available.

The data also vary as to how they were obtained. Some are based on complete enumeration (every person or item is counted); some on records kept for administrative or regulatory purposes (school enrollment, hospital records, securities registration, financial accounts, etc.); some on sample survey results (see below); and some on estimation procedures which range from highly sophisticated techniques to crude "informed guesses." In virtually all data collection operations, various types of errors will be present in the data. The types and sources of errors are discussed later.

Prior to carrying out a census or sample survey, the group of people or items of interest, referred to as the *universe* or *population*, must be clearly defined. For example, if data are collected for the universe of farms in the United States, it is necessary to define a "farm" before data are collected.

A large portion of the data appearing in the tables was obtained from sample surveys. A *sample survey* is a data collection operation in which data are obtained for only a part (i.e., a *sample*) of the entire population being surveyed. In many other cases the data came from a complete *census*—a data collection operation in which an attempt is made to enumerate each member of the universe. For most censuses and sample surveys, the data were obtained from completed questionnaires. However, in some cases, data were obtained from other sources as noted above.

In cases in which a sample survey is used to obtain data about a universe, the sample selected for the survey is usually a *probability sample*. It is a sample obtained from a universe by using a chance device in such a way that every possible sample of universe members has a known probability (or chance) of selection as the survey sample. When probability sampling is used, the probability of selection of each population unit can be determined. The *probability* of selection of a unit from the universe is a number, between zero and one, which represents the likelihood that the unit will be chosen for the sample.

For large-scale sample surveys, the probability sample of units is often selected as a *multistage sample*. The first stage of a multistage sample is the selection of a probability sample of large groups of population members, referred to as *primary sampling units* (PSU's). For example, in a national multistage household sample, PSU's are often counties or groups of counties. The second stage of a multistage sample is the selection, within each PSU selected at the first stage, of smaller groups of population units, referred to as *secondary sampling units*. In subsequent stages of selection, smaller and smaller nested groups are chosen until the ultimate sample of population units is obtained. To qualify a multistage sample as a probability sample, all stages of sampling must be carried out using probability sampling methods.

Prior to selection at each stage of a multistage (or a single-stage) sample, a list of the sampling units for that stage, referred to as a *sampling frame*, must be obtained. For example, for the first stage of selection of a national household sample, a list of the counties and county groups that form the PSU's must be obtained. For the final stage of selection, lists of households, and sometimes persons within households, have to be

compiled in the field. If a single-stage sample of the Nation's hospitals is to be selected, a list of hospitals must be obtained to use as the sampling frame. Unfortunately, it is virtually impossible to obtain a complete, up-to-date frame for a hospital survey. This is a problem incurred for most surveys of institutions and for many other types of surveys as well.

Whenever the quantities in a table refer to an entire universe, but are constructed from data collected in a sample survey, the table quantities are referred to as *sample estimates*. In constructing a sample estimate, an attempt is made to come as close as is feasible to the corresponding universe quantity that would be obtained from a complete census of the universe. The errors that can be present in a sample estimate of a universe quantity are classified as either *sampling errors* or *nonsampling errors*.

The *sampling error* is that part of the difference between the estimate and the corresponding population quantity that arises because only a portion (i.e., a sample) of the universe was used to estimate the universe quantity. The measure of sampling error that is often used is the *standard error* (S.E.) of the estimate. Valid estimates of the standard errors of survey estimates can usually be calculated from the data collected in a probability sample survey. Under most circumstances, the estimated standard error of an estimate can be used as follows in measuring the sampling error: The chances are about two out of three (68 percent) that a sample estimate will be within one standard error of the corresponding universe quantity that would be obtained from a complete census, using the same data collection procedures. Also, the chances are about 19 out of 20 (95 percent) that a sample estimate will be within two standard errors of the corresponding population value.

As a measure of sampling error, some statisticians prefer to use the relative standard error, or *coefficient of variation*, of an estimate, rather than the standard error. The coefficient of variation (CV) of an estimate is the standard error of the estimate expressed as a percent of the estimate. That is, the CV of an estimate is the standard error of the estimate divided by the *expected value* of the estimate (i.e., divided by the average value of the estimate taken over repeated samples). It can be used as a measure of sampling error in a way similar to the use of the standard error. For example, if the estimated CV of an estimate is 2.3 percent, the chances are about 19 out of 20 that the estimate will not differ from the population quantity by more than 4.6 percent of the estimate (i.e. two times 2.3 percent).

Any error in a sample estimate that arises from sources other than sampling is classified as a *nonsampling error*. Nonsampling errors arise from such sources as varying interpretation of questions by interviewers, unwillingness or inability of respondents to give correct answers, nonresponse, improper coverage, and processing errors in coding, editing, and tabulating data.

Nonsampling errors are of two kinds—random and nonrandom. *Random errors* arise because of the varying interpretation of questions by respondents, interviewers, coders, or other processors. To the extent that people do not ask questions, record answers, code responses, or process data in other ways in a uniform manner, random errors result. The impact of random errors is usually an overstatement of the precision of the survey estimates. Since special experiments are necessary to measure the magnitude of these random errors, their magnitudes are generally unknown.

Nonrandom errors in survey estimates result from nonresponse, from incorrect responses, from undercoverage of certain population groups, and other such sources. Estimates of the magnitude of nonrandom errors also require special experiments or access to independent data and, consequently, are seldom available.

To compensate for suspected nonrandom errors, adjustments of the sample estimates are often made. For example, adjustments are frequently made for nonresponse, both total and partial. *Total nonresponse* refers to a case in which no usable survey responses were obtained from a sample person. *Partial* or *item nonresponse* refers to a case in which only a portion of the survey items was not obtained.

Adjustments made for either type of nonresponse are often referred to as *imputations*. Imputation for total nonresponse is usually made essentially by substituting for the questionnaire responses of the nonrespondents the "average" questionnaire responses of the respondents. These imputations are usually made separately within various groups of sample members, formed by attempting to place respondents and nonrespondents together that have "similar" survey characteristics. Imputation for item nonresponse is usually made by substituting for a missing item the response to that item of a respondent having characteristics that are "similar" to those of the nonrespondent.

For an estimate calculated from a sample survey, the *total error* in the estimate is composed of the sampling error, which can usually be estimated from the sample, and the nonsampling error, which usually cannot be estimated from the sample. The total error present in a population quantity obtained from a complete census is composed of only nonsampling errors. Ideally, estimates of the total error associated with data given in the *Statistical Abstract* tables should be given. However, due to the unavailability of estimates of nonsampling errors, only estimates of the levels of sampling errors, in terms of estimated standard errors or coefficients of variation, are available.

Principal data bases.—Beginning on page 948 are brief descriptions of 39 of the sample surveys and censuses that provide a substantial portion of the data contained in this *Abstract*.

SUBJECT, SOURCE, TITLE, TABLES	UNIVERSE, FREQUENCY, TYPES OF DATA	TYPE OF DATA COLLECTION OPERATION
<p>SECTION 1. POPULATION</p> <p>Bureau of the Census <i>Census of Population</i></p> <p>See tables citing <i>Census of Population</i> in section 1 and also in sections 2, 5, 7, 13, 14, 16, 22, 28, and 32.</p> <p><i>Current Population Survey (CPS)</i></p> <p>See tables citing <i>Current Population Reports</i> primarily in section 1, but also in sections 2, 4, 5, 11, 13, 14, 16, 24, and 32. Many Bureau of Labor Statistics' (BLS) tables in section 13 are CPS based.</p>	<p>Complete count of U.S. population conducted every 10 years since 1790; every 5 years beginning 1985. Data obtained on number and characteristics of inhabitants.</p> <p>Monthly survey of civilian non-institutional population, 14 years old or over, to obtain data on employment, unemployment, and a number of other characteristics.</p>	<p>In 1970, complete census for some items—age, sex, race, marital status, and relationship to household head. Other items collected from a 5% and a 15% probability sample of the population.</p> <p>Multistage probability sample of about 55,000 households in 376 PSU's. A continual sample rotation system is used. Households are in sample 4 months, out for 8 months, and in for 4 more. Month-to-month overlap is 75%; year-to-year overlap is 50%.</p>
<p>SECTION 2. VITAL STATISTICS</p> <p>National Center for Health Statistics <i>Vital Registration System</i></p> <p>See tables 78-86, 91, and 102-112.</p>	<p>Annual data on births and deaths in the United States.</p>	<p>Mortality data based on complete file of death records, except 1972, based on 50% sample. Natality statistics for most years, 1951-1971, based on 50% sample of birth records received by NCHS. Beginning 1972, data from some States received through Cooperative Health Statistics System and complete file used; data from other States based on 50% sample.</p>
<p>(See section 1 above for information pertaining to tables 87-90, 92, 115, and 116.)</p>		
<p>SECTION 4. HEALTH AND NUTRITION</p> <p>National Center for Health Statistics <i>Health Interview Survey (HIS)</i></p> <p>See tables 157, 179, 181-184, 186, 187, 195, and, in section 5, table 250.</p> <p><i>Master Facility Inventory (MFI)</i></p> <p>See tables 164, 173, and 175.</p> <p><i>National Nursing Home Survey (NNHS)</i></p> <p>See tables 173 and 174.</p>	<p>Continuous data collection covering the civilian noninstitutional population to obtain information on personal and demographic characteristics, illnesses, injuries, impairments, chronic conditions, and other health topics.</p> <p>Annual survey of hospitals with 6 or more beds and biennial surveys of nursing and related care homes with 3 or more beds and other custodial or remedial care facilities to update file. Information obtained on names, locations, and types of facilities, and number of beds and residents or patients.</p> <p>Survey of 23,105 nursing homes, classified in 1973 Master Facility Inventory or open for business in 1976, conducted in the summer and winter of 1977. Data collected on expenditures, staff, and residents of nursing homes, and discharges from nursing homes.</p>	<p>Multistage probability sample of 41,000 households (in 376 PSU's) selected in groups of about four geographically adjacent households.</p> <p>Complete census of eligible institutions. Comprehensive file periodically updated to include names and addresses of newly established inpatient facilities from State licensing agencies.</p> <p>Probability sample of 1,698 nursing homes. In each home, probability samples of about 5 residents, 4 discharges, and 10 employees chosen.</p>

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
<p>In 1970, extensive use of mail questionnaires in urban areas; personal interviews in most rural areas. Extensive telephone and personal followup for nonrespondents. Imputations made for missing characteristics.</p>	<p>The CV's for national and State estimates are generally very small. For example, the estimated CV for the estimated number of persons in poverty is less than 1% at the State and national level.</p>	<p>Based on the 1970 census evaluation, an estimate of the net undercount is 2.5%.</p>	<p>Bureau of the Census, <i>Estimates of Coverage of the Population by Sex, Race, and Age: Demographic Analysis, PHC(E)-4; and Census of Population: 1970, PC(1)-C, Appendix C.</i></p>
<p>For first and fifth months that a household is in sample, personal interviews; other months, data collected by phone.</p>	<p>Estimated CV for labor force, total employment, and nonagricultural employment, .3 percent; for total unemployment and agricultural employment, 1.5 to 3.0 percent.</p>	<p>Unemployment underestimated by about .5 percent. Other statistics less biased. Four to 6 percent of sample households unavailable for interviews.</p>	<p>Bureau of the Census and Bureau of Labor Statistics, <i>Concepts and Methods Used in Labor Force Statistics from Current Population Survey</i> (Census series P-23, No. 62; BLS report No. 463) and Bureau of the Census, <i>The Current Population Survey</i> (Tech. Paper 40).</p>
<p>Reports based on records from registration offices of all States, District of Columbia, Puerto Rico, Virgin Islands, Guam, and certain cities.</p>	<p>For births, CV's are small due to large portion of total file in sample (except for very small estimated totals).</p>	<p>In 1964-1968, under-registration of births estimated to be .7%. Data on deaths believed to be as complete.</p>	<p>U.S. National Center for Health Statistics, <i>Vital Statistics of the United States, 1976</i>, vol. 1 and vol. II, part A and part B, forthcoming.</p>
<p>Personal household interviews. Extensive followup of nonrespondents. Data adjusted for nonresponse by imputation procedure based on "average" characteristics of persons in interviewed households in same geographic area.</p>	<p>Estimated CV's: For physician visits by males, 1.5%; for workdays lost by males, 3.5%; for persons injured at home, 4.7%</p>	<p>Response rate was 96% in 1976.</p>	<p>U.S. National Center for Health Statistics, <i>Vital Statistics of the United States</i>, series 10-No. 119, DHEW No. (PHS) 78-1547, Nov. 1977.</p>
<p>Mail questionnaires to facilities. Missing questionnaire items imputed by using either previously reported information or by using current data from similar responding facilities.</p>	<p>Not applicable.</p>	<p>The response rate in the 1976 survey of hospitals was about 92%. In 1976, coverage was 95% complete for nursing care and related homes and other custodial or remedial care facilities.</p>	<p>U.S. National Center for Health Statistics, "Design and Methodology of the 1967 Master Facility Inventory Survey", <i>Vital and Health Statistics, PHS Pub. No. 1000, Series 1-No. 9</i>, Jan. 1971.</p>
<p>Data on facilities through personal interviews with administrators; patient data through medical records; personal interviews with nurses and expenditure data by questionnaires to accountants; staff data by self-administered questionnaires. Data adjusted for nonparticipation of a home and for item nonresponse.</p>	<p>The provisional 1977 CV for estimated number of beds in proprietary homes was 4.7%; for residents in homes with less than 50 beds, 10%. In 1976, CV for days of care to residents in homes in Northeast was 4.7%.</p>	<p>Response rates were 94% for facilities, 99% for residents, 85% for expenditures, 81% for staff, and 97% for discharges.</p>	<p>U.S. National Center for Health Statistics, "A Comparison of Nursing Home Residents and Discharges from the 1977 NNHS: United States," <i>Advance Data from Vital and Health Statistics</i>, No. 29, May 17, 1978; "An Overview of Nursing Home Characteristics: 1977 NNHS—Provisional Data," <i>Advance Data from Vital and Health Statistics</i>, forthcoming.</p>

<p>SECTION 6. LAW ENFORCEMENT, FEDERAL COURTS, AND PRISONS</p> <p>Law Enforcement Assistance Administration (LEAA) <i>National Crime Survey</i></p> <p>See tables 291-294.</p> <p>(See section 2 above for details pertaining to tables 295, 296, and 298; section 10 for details on tables 309 and 311; and section 30 for table 314.)</p>	<p>Monthly survey of individuals, households, and commercial establishments in the U.S. to obtain data on criminal victimization of those units for compilation of annual estimates.</p>	<p>National probability sample survey of about 72,000 households in 376 PSU's selected from a list of addresses from the 1970 census, supplemented by new construction permits. Also, an establishment sample of about 15,000 establishments selected from 34 PSU's increased in 1976 to about 50,000 establishments from 58 PSU's.</p>

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
Mail questionnaire with telephone followup.	Not applicable.	Item nonresponse rate was about 25% for enrollment data and 30% for financial data in 1972 census. In 1972, 383 plans out of 465 provided usable responses.	U.S. Health Care Financing Administration, <i>HCHA Health Notes</i> , "Independent Health Insurance Plans," published annually.
Mail survey with followup for nonresponse through direct contact or other records.	Not applicable.	Some distortion in expenditures by function due to variations in State accounting systems.	U.S. National Center for Education Statistics, <i>Revenues and Expenditures for Public Elementary and Secondary Education, 1975-76</i> .
Mail survey. Imputations for missing data included in national totals; imputations are derived based on data reported over previous 5 years.	Not applicable.	Arise from differences in interpretation of questions, definitions, and instructions.	U.S. National Center for Education Statistics, <i>Statistics of Public Elementary and Secondary Day Schools</i> , published annually.
Survey package mailed in spring; followup procedures for nonrespondents. Missing data imputed by using data for an earlier year, adjusted for trends observed in earlier HEGIS surveys, or data of similar institutions.	Not applicable.	For 1976, 100% response rate for enrollment data; 94% response rate for financial statistics of institutions. Imputed expenditures amounted to about 3% of total expenditures in 1976.	U.S. National Center for Education Statistics, <i>Financial Statistics of Institutions of Higher Education: Fiscal Year 1976, State Data</i> .
Conducted by mail, with mail and phone followup. Missing data imputed by using previous year's reports.	Not applicable.	Due to nature of institutional record keeping, number of specialized undergraduate degrees understated; not all types of degrees identified on survey form.	U.S. National Center for Education Statistics, <i>Earned Degrees Conferred, 1975-76, Summary Data</i> .
Personal interviews conducted every 6 months for 3 years for each household in sample; for indefinite period for establishments in sample. 12,000 households and 2,500 establishments (8,300 in 1976) enumerated monthly.	CV in 1976: 4% for estimate of personal robbery counts; 1.6% for household burglary count.	For establishments, nonresponse rate about 1%. For household survey, 4% of eligible households were not interviewed and 2% of persons within responding households did not participate.	U.S. Law Enforcement Assistance Administration, <i>Criminal Victimization in the United States, A Comparison of 1975 and 1976 Findings</i> , Report No. 8D-NCS-N-8, Nov. 1977.

SUBJECT, SOURCE, TITLE, TABLES	UNIVERSE, FREQUENCY, TYPES OF DATA	TYPE OF DATA COLLECTION OPERATION
<p>SECTION 8. PUBLIC LANDS, PARKS, RECREATION, AND TRAVEL</p> <p>Bureau of the Census <i>Census of Transportation National Travel Survey</i></p> <p>See tables 410 and 411.</p>	<p>Survey of all persons in the U.S. conducted every 5 years to obtain information on number and characteristics of long-distance trips and all other trips in a designated 24-hour period.</p>	<p>Probability sample of about 24,000 households in which residents were asked about trips they had taken.</p>
<p>SECTION 10. STATE AND LOCAL GOVERNMENT FINANCES AND EMPLOYMENT</p> <p>Bureau of the Census <i>Census of Governments</i></p> <p>See tables in section 10 citing <i>Census of Governments</i>; in section 11, tables 537 and 538; and in section 16, table 830.</p> <p><i>Annual Survey of State and Local Government.</i></p> <p>See tables citing <i>Public Employment and Governmental Finances.</i></p>	<p>Survey of all governmental units in the U.S. conducted every 5 years to obtain data on government revenue, expenditures, debt, employment and employee-retirement systems, property values, public school systems, and number, size, and structure of governments.</p> <p>Sample survey conducted annually to obtain data on revenue, expenditure, debt, and employment of State and local governments. Universe is all governmental units in the U.S. (about 80,000).</p>	<p>Complete census. List of units derived through classification of government units recently authorized in each State and identification, counting, and classification of existing local governments and public school systems.</p> <p>Sample of about 16,000 units includes all State governments, county governments with 50,000+ population, municipalities with 25,000+ population, and other governments meeting certain financial criteria; probability sample for remaining units.</p>
<p>SECTION 11. SOCIAL INSURANCE AND WELFARE SERVICES</p> <p>Social Security Administration <i>Aid to Families with Dependent Children (AFDC)</i></p> <p>See tables 549, 562-564, 566, 567, and 569.</p> <p><i>Benefit Data</i></p> <p>See tables 532-534 and 571.</p> <p><i>Supplemental Security Income Program (SSI)</i></p> <p>See tables 522, 562-565, 568, and 570.</p>	<p>Survey conducted periodically of all families receiving financial assistance under the AFDC program.</p> <p>All persons receiving monthly benefits under Title II of Social Security Act. Data on types of benefits paid, State monthly benefits, benefits withheld and terminated, and value of benefits awarded.</p> <p>All eligible aged, blind, or disabled persons receiving SSI benefit payments under SSI program. Data include number of persons receiving federally administered SSI, amounts paid, and State administered supplementation.</p>	<p>Probability sample survey of .5% of each State's caseload. Sample size was 33 809 families in 1973 and 31,063 families in 1975.</p> <p>Data based on administrative records.</p> <p>Data based on administrative records.</p>

(See section 1 above for information pertaining to the Current Population Survey and section 10 for information pertaining to Census of Government.)

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
Quarterly personal interviews in census year, supplemented by telephone followups.	S.E. for estimate of total household trips (79,926,000) in the first quarter of 1977 is approximately 3,106,000.	Areas of possible non-sampling errors include memory loss on the part of the respondents in reporting trips and in the methods used to estimate trip mileage. Problems in the representation of new construction and mobile homes, and in under-coverage of persons in households also create nonsampling errors. The nonresponse rate was about 10%.	Bureau of the Census, <i>Census of Transportation: 1977, National Travel Survey</i> , Report No. TC77-N-1.
Field compilation of financial data from official records and reports for States and large local governments; mail canvass of other units, with mail and telephone followups.	Not applicable.	Some response errors may arise due to respondents' interpretation of definitions and instructions.	Bureau of the Census, <i>Census of Governments, 1977</i> , various reports.
Field compilation of financial data from official records and reports for States and large local governments; mail canvass of other units with mail and telephone followups of nonrespondents. Data for nonresponses imputed from previous year.	CV for estimates of major employment and financial items are generally less than 2% for most States and less than 1% for the majority of States.	Nonresponse rate about 15% for number of units (about 5% for value items). Other possible errors may result from undetected inaccuracies in classification, response, and processing.	Bureau of the Census, <i>Public Employment in 1976</i> , GE 76, No. 1, and <i>Governmental Finances in 1975-76</i> , GF 76, No. 5.
Data obtained through administrative records.	S.E. for estimated recipient rates, .5% or less for States.	Processing errors, which are believed to be small.	Social Security Administration, <i>Findings of the 1975 Study</i> , September 1977.
Records used consist of actions pursuant to applications for benefits, updated by subsequent post-entitlement actions.	Not applicable.	See above.	Social Security Administration, <i>Annual Statistical Supplement to the Social Security Bulletin</i> .
Data adjusted to reflect returned checks and overpayment refunds. For federally administered, actual adjusted amounts used; for State administered, payments deflated for average rate across all States.	Not applicable.	See above.	See above.

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
Cooperating State agencies mail questionnaires to sample establishments to develop State and local estimates; information forwarded to BLS where national estimates prepared.	Estimated CV for average weekly hours paid, .1%; for average hourly earnings, .2%.	Incorrect responses believed to be somewhat offsetting. Estimates of employment adjusted annually to reflect complete universe. Average adjustment of .2%.	U.S. Bureau of Labor Statistics, <i>Employment and Earnings, Explanatory Data</i> , tables I-O.

Prices of 400 items obtained from about 1,800 food outlets, 30,000 tenants, and 16,000 other reporters in 56 areas. Prices of most goods and services obtained monthly in the 5 largest areas and every 3 months in others.	Estimates of standard errors for monthly, quarterly, and annual percent changes respectively are: All items (.04, .05, .10); food at home (.10, .11, .22); food away from home (.08, .14, .31); housing (.06, .10, .18); apparel and upkeep (.15, .27, .25); transportation (.07, .12, .20); medical care (.14, .19, .27); personal care (.16, .26, .64); reading and recreation (.09, .16, .33); and other goods and services (.11, .12, .18).	Errors result from inaccurate reporting, difficulties in defining concepts and their operational implementation, lack of systematic method for incorporating new outlets in the sample, and introduction of product quality changes and new products.	See text, pp. 481-482.
Data collected by mail. If transaction prices not supplied, list prices used. Some prices obtained from trade publications, organized exchanges, and government agencies. To calculate index, price changes multiplied by their relative weights based on total net selling value of all commodities in 1972.	Not applicable.	Transaction prices at time of shipment not always available, so list and order prices sometimes used. Only about half of the total value of the mining and manufacturing sectors covered by current program. Double counting bias present because gross shipment values are used as weights.	U.S. Bureau of Labor Statistics, <i>Handbook of Methods, Bulletin 1910</i> (1976).

SUBJECT, SOURCE, TITLE, TABLES	UNIVERSE, FREQUENCY, TYPES OF DATA	TYPE OF DATA COLLECTION OPERATION
<p>SECTION 22. TRANSPORTATION—LAND</p> <p>Bureau of the Census <i>1972 Truck Inventory and Use Survey</i></p> <p>See table 1106.</p> <p>(See section 1 above for information pertaining to tables 1107 and 1108 and section 2 for information pertaining to table 1088.)</p>	<p>Survey of truck owners conducted every five years to obtain data on truck resources, excluding government owned vehicles.</p>	<p>Probability sample of 114,000 trucks (private and commercial) from 20 million registrations on file in motor vehicle departments in the States and District of Columbia.</p>
<p>SECTION 23. TRANSPORTATION—AIR AND WATER</p> <p>Bureau of the Census <i>Foreign Trade—Export Statistics</i></p> <p>See Bureau of the Census citations for export statistics in source notes in sections 23 and 31 and also tables 1217, 1314, and 1541.</p> <p><i>Foreign Trade—Import Statistics</i></p> <p>See Bureau of the Census citations for import statistics in source notes in sections 23 and 31 and also tables 1314 and 1541.</p>	<p>The export declarations collected by Customs are processed each month to obtain data on the movement of U.S. merchandise exports to foreign countries. Data obtained include value, quantity, and shipping weight of exports by commodity, by country of destination, by Customs district of exportation, and by mode of transportation.</p> <p>The import entry documents collected by Customs are processed each month to obtain data on the movement of merchandise imported into the United States. Data obtained include value, quantity, and shipping weight by commodity, by country of origin, by Customs district of entry, and by mode of transportation.</p>	<p>Shipper's Export Declarations are required to be filed for the exportation of merchandise valued over \$250. Customs officials collect and transmit the documents on a flow basis for data compilation. Probability sampling is used in the compilation process for low-value shipments (which account for 3% of total value), i.e., shipments to Canada valued \$251-\$1,999 and to other countries valued \$251-\$999.</p> <p>Import entry documents are required to be filed for the importation of goods into the United States. Customs officials collect and transmit statistical copies of the documents on a flow basis for data compilation. A 1% sample of entries is processed for shipments valued \$250 or less, which account for less than .5% of the total import value.</p>
<p>SECTION 24. AGRICULTURE</p> <p>Bureau of the Census <i>1974 Census of Agriculture</i></p> <p>See tables citing Census of Agriculture in section 24 and, in section 32, table 1542.</p> <p>U.S. Department of Agriculture, Economics, Statistics, and Cooperatives Service (ESCS)</p> <p><i>Basic Area Frame Sample</i></p> <p>See tables citing ESCS in source notes in section 24 and tables 1281, 1282, and 1433 which pertain to this or the following two surveys.</p>	<p>Census of all farm operators in the U.S. every five years, to obtain data on farm acreage, crops and livestock, equipment, farm sales, income, expenses, and other items, by State and county.</p> <p>Two annual surveys of all U.S. farm operators in the U.S. June survey collects data on planted acreage and livestock inventories; December survey collects data on livestock inventories and fall-seeded crop acreage.</p>	<p>Complete census of most farms; sample of other farms. Self enumeration by mail using lists of persons and organizations in agriculture maintained by Internal Revenue Service, Social Security, and Agricultural Stabilization and Conservation Service (ASCS).</p> <p>Stratified probability sample of about 16,000 land area units of about 1 sq. mile (range from .1 sq. mile in cities to several sq. miles in open grazing areas). Sample includes 60,000 parcels of agricultural land. About 20% of the sample replaced annually.</p>

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
Questionnaire mailed to owner of each truck. Two mail followups for non-respondents.	Estimated CV's for major characteristics at State level, 1% to 2%; much larger CV's for detailed characteristics.	Response rate of 90%. Sample verification of coding and punching allowed maximum of 3% error in average quality.	U.S. Bureau of the Census, <i>Census of Transportation: 1972</i> , vol. II, <i>Truck Inventory and Use Survey</i> .
Statistical copies of Shipper's Export Declarations received on a daily basis from Customs ports throughout the country are subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued \$1,000 and over, and in the case of exports to Canada, \$2,000 and over. Estimates for shipments valued at \$250 or less are made, based on established percentages of individual country totals.	Estimated CV's for total value of exports about .1% and, for major commodity groupings, about 1%. CV's less than 1% for total value over \$10 million, less than 2% for totals between \$3 million and \$10 million, and less than possible errors due to rounding for values less than \$3 million.	Clerical and complex computer checks intercept most processing errors and minimize otherwise significant reporting errors; other nonsampling errors are caused by undercounting of exports to Canada due to the nonreceipt of some Shipper's Export Declarations.	U.S. Bureau of the Census, <i>U.S. Exports, Schedule E, Commodity by Country</i> , FT 410.
Statistical copies of import entry documents, received on a daily basis from Customs ports of entry throughout the country, are subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued \$251 and over.	Estimated CV for world area and country totals less than .1% for totals over \$20 million; less than .5% for totals between \$1 million and \$20 million and less than possible errors due to rounding for values less than \$1 million.	Verification of statistical data reporting by Customs officials prior to transmittal and a subsequent program of clerical and computer checks hold nonsampling errors arising from reporting and/or processing errors to a minimum.	U.S. Bureau of the Census, <i>U.S. General Imports, Schedule A, Commodity by Country</i> , FT 135.
Questionnaire to all farms with \$2,500+ sales; shorter questionnaire to other (only a sample from ASCS list if not also on other lists). Nonrespondent followup by letters and phone calls. Published data adjusted for nonresponse, but not for underenumeration.	Standard errors by county and State for farm acreage, value of land and buildings, various crop and livestock values given in Appendix A tables of each 1974 State volume. The estimated CV for U.S. land in farms and value of crops sold is .04%.	Undercoverage of farms (chiefly small farms) was about 11% nationally; amount of land missed 7%; and value of farm products sold underestimated by 3%. Estimates of undercoverage in each State in 1969 and 1974 given in State volumes. Adjustment for farm nonresponse as a percent of the U.S. total represented 12.3% for number of farms, 5.9% for land in farms, and 4.1% for value of products sold.	U.S. Bureau of the Census, <i>Census of Agriculture, 1974</i> , State and county volumes and vol. IV, part 3, <i>Coverage Evaluation</i> .
Data collection by personal enumeration. Imputation based on enumerator observation or data reported by respondents having similar agricultural characteristics.	CV's range from 1% to 2% for national estimates of major crop acreage and livestock inventories and from 3% to 8% for corresponding State estimates.	Minimized through rigid quality controls on the collection process and careful review of all reported data.	U.S. Department of Agriculture, SRS, <i>Scope and Methods of the Statistical Reporting Service</i> , Miscellaneous Publication No. 1308, July 1975.

SUBJECT, SOURCE, TITLE, TABLES	UNIVERSE, FREQUENCY, TYPES OF DATA	TYPE OF DATA COLLECTION OPERATION
<p>SECTION 24. AGRICULTURE, —CON.</p> <p><i>Multiple Frame Surveys</i></p> <p><i>Objective Yield Surveys</i></p> <p>(See section 1 above for information pertaining to the Current Population Survey, and section 23 for information pertaining to table 1217.)</p>	<p>Surveys of all U.S. farm operators to obtain data on major livestock inventories, selected crop acreages and production, and farm labor characteristics; and to obtain farm economic data for price indexing.</p> <p>Surveys for data on corn, cotton, potatoes, soybeans, and wheat to forecast and estimate yields.</p>	<p>Primary frame from general or special purpose lists, supplemented by a probability sample of land areas.</p> <p>Random location of plots in probability sample of fields. Fields selected in June or December from Basic Area Frame Sample (see above).</p>
<p>SECTION 28. CONSTRUCTION AND HOUSING</p> <p>Bureau of the Census <i>Census of Construction Industries</i></p> <p>See tables 1361–1363 and, in section 32, table 1637.</p> <p><i>Monthly Survey of New Construction</i></p> <p>See tables 1366–1368, 1370, 1371, 1392, and 1393.</p> <p><i>Value of New Construction Put in Place</i></p> <p>See tables 1353 and 1354.</p>	<p>Census every five years. In 1972 it covered all establishments primarily engaged in contract construction, in construction for sale on their own account (operative builders), or in subdividing real property into lots (438,000 firms with paid employees, 483,000 without paid employees).</p> <p>Survey conducted monthly of newly constructed housing units (excluding mobile homes, and non-housekeeping residential buildings such as motels, hotels, courts, and cabins). Data collected on the start, completion, and sale of housing. (Annual figures are aggregates of monthly estimates.)</p> <p>Survey conducted monthly on total value of all construction put in place in the current month, both public and private projects. Construction values include costs of materials and labor, contractors' profits, overhead costs, cost of architectural and engineering work, and miscellaneous project costs. (Annual figures are aggregates of monthly estimates.)</p>	<p>Probability sample of 145,000 firms, which comprised all medium and large size employers in the universe and a probability sample of small employers. Also all 483,000 firms without paid employees are included in the sample coverage.</p> <p>Probability sample of housing units obtained from building permits selected from 14,000 permit-issuing places. (Estimates for those places adjusted to account for buildings not requiring permits.) For nonpermit places, multistage probability sample of new housing units selected in 137 PSU's. In those areas, "knowledgeable" persons provide list of housing starts verified by phone or visit; areas also canvassed.</p> <p>Varies by type of activity: Total cost of private one-family houses started each month is distributed into value in place using fixed patterns of monthly construction progress; using a multistage probability sample, data for private multifamily housing are obtained by mail from owners of multiunit projects. Data for residential additions and alterations are obtained in a quarterly survey measuring expenditures; monthly estimates are interpolated from quarterly data. Estimates of private non-housekeeping, nonresidential buildings and State and local government construction are obtained by mail from owners (or agents) for a probability sample of projects; estimates of firm nonresidential construction expenditures are based on U.S. Department of Agriculture annual estimates of construction; public utility estimates are obtained from reports submitted to Federal regulatory agencies and from private utility companies; estimates for all other private construction (nonbuilding) are obtained by phasing F. W. Dodge contract award data; government estimates of Federal construction are based on monthly data supplied by Federal agencies.</p>

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
<p>Mail or personal interviews used for initial data collection. Mail nonrespondent followup by phone, mail, and personal interviews.</p> <p>Enumerators and analysts count and measure plant characteristics in sample fields.</p>	<p>Estimated CV for number of hired farm workers is about 3%. See above for CV's of other national and State estimates.</p> <p>CV's for national estimates of production are about 2% to 3%.</p>	<p>Nonresponse rates vary from 5% to 15%.</p> <p>See above.</p>	<p>See above.</p> <p>See above.</p>
<p>Survey data for employers collected by questionnaire. IRS business tax forms used for establishments without paid employees. Followup on problems with questionnaire responses. Within industry, by State cross-classifications, missing data imputed based on relationships of known responses to administrative data.</p> <p>Data obtained by telephone inquiry and field visit.</p> <p>See "Type of Data Collection Operation". Imputation accounts for approximately 20% of estimated value of construction each month.</p>	<p>Estimated CV of about 1% at national level for estimated totals of all construction and about .5% for construction subindustries.</p> <p>Estimated CV of 3% to 4% for estimates of national totals; as high as 20% for estimated totals of more detailed characteristics, such as residential multi-unit structures.</p> <p>CV estimates for private nonresidential building construction range from 1% for estimated number of office buildings to 6% for religious institutions. CV approximately 1% for total new private nonresidential buildings.</p>	<p>Response rate 85% to 90% for most items. Computer scan used to identify incomplete questionnaires for review.</p> <p>Response rate over 90% for most items. Nonsampling errors attributed to definitional problems, differences in interpretation of questions, incorrect reporting, inability to obtain information about all cases in the sample, and processing errors.</p> <p>For directly measured data series based on samples, some nonsampling errors may arise from processing errors, imputations, and misunderstanding of questions. Indirect data series are dependent on the validity of the underlying assumptions and procedures.</p>	<p>U.S. Bureau of the Census, <i>Census of Construction Industries, 1972</i>, vol. 1, <i>Industry and Special Statistics</i>.</p> <p>U.S. Bureau of the Census, <i>Construction Reports</i>, Series C20, <i>Housing Starts</i>, C22, <i>Housing Completions</i>, C25, <i>Housing Sales</i>; and C27, <i>Price Index of New One-Family Houses Sold</i>.</p> <p>U.S. Bureau of the Census, <i>Construction Reports</i>, Series C30, <i>Value of New Construction Put in Place</i>.</p>

<p>SECTION 28. CONSTRUCTION AND HOUSING—CON.</p> <p><i>Census of Housing</i></p> <p>See tables 986, 1373-1377, 1379, 1382, and 1394.</p> <p><i>Annual Housing Survey</i></p> <p>See tables citing Annual Housing Survey in source notes in section 28 and, in section 19, table 986.</p> <p><i>Housing Vacancy Survey</i></p> <p>See tables 1388 and 1389.</p>	<p>Census of all occupied and vacant housing, excluding group quarters, conducted every 10 years as part of the decennial census (see section 1 above) to determine adequacy and quality of U.S. housing.</p> <p>Conducted nationally in the fall of each year to obtain data on the approximately 80 million occupied or vacant housing units in the U.S. (group quarters are excluded). Data include characteristics of occupied housing units, housing inventory changes, vacant units, new housing and mobile home units, recently relocated households, and housing and neighborhood quality indicators.</p> <p>Survey to obtain data on vacancy rates, characteristics of vacant units, tenure of occupied units from 1 sample; and characteristics of occupied units from a second.</p>	<p>For 1970, a complete count of 12 housing items. Other items collected from 5% and 15% probability samples selected for two sets of detailed questions on housing (these two sets having some common items). Mailing lists compiled from several sources and checked by the Post Office were supplemented with listings of possible housing units observed by enumerators.</p> <p>The national sample is a multi-stage probability sample with about 75,500 units eligible for interview. Sample units, selected within 461 PSU's, are surveyed over a 3-month period.</p> <p>Consists of 2 samples: First one from CPS (see section 1 above); second sample, the Quarterly Household Survey (QHS), is a probability sample of 6,000 households in 103 PSU's.</p>
(See section 1 above for information pertaining to the Census of Population.)		
<p>SECTION 29. MANUFACTURES</p> <p>Bureau of the Census <i>Census of Manufactures</i></p> <p>See tables citing <i>Census of Manufactures</i> in source notes in section 29 and also tables 598, 947, 992, 993, 999, 1091, 1271, and 1538.</p> <p><i>Annual Survey of Manufactures</i></p> <p>See tables citing <i>Annual Survey of Manufactures</i> in source notes in section 29.</p>	<p>Conducted every five years to obtain information on labor materials, capital input and output characteristics, plant location, and legal form of organization for all plants in the U.S. with one or more employees.</p> <p>Conducted annually to provide basic measures of manufacturing activity for intercensal years for all manufacturing establishments having one or more paid employees.</p>	<p>Complete enumeration of survey frame, which contained about 312,000 firms, obtained from IRS and Social Security Administration records. In 1972, about 120,000 firms were small single-unit firms; about 104,000 firms with no employees were excluded.</p> <p>Sampling frame is 312,000 firms in the 1972 Census of Manufactures (see above), supplemented by Social Security Administration lists of new manufacturers, from which a probability sample of 70,000 establishments is selected. All companies having at least one establishment with 250+ employees included in the sample along with a sample of other companies. All establishments within selected companies are included.</p>

(See section 24 above for information pertaining to table 1433 and section 15 for information pertaining to table 1445.)

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
<p>In 1970, a self-enumeration census using a mail-out/mail-back procedure used in most areas (previously, enumerators visited households). Followup for nonrespondents and identification of vacant units done by phone and personal visit.</p> <p>Survey conducted by personal interview with subsequent followup by telephone or personal visit.</p>	<p>Estimated CV's of the estimates at the national level are very small. Most of the CV's are less than .6%. As an example, the estimated CV for the estimated number of housing units with warm air furnaces is less than .03%.</p> <p>For the national sample, illustrations of the S.E. of the estimates are provided in the appendix of each report. As an example, the estimated CV is about .3% for the estimate of the number of owner occupied housing units.</p>	<p>In 1970, undercount of housing units estimated at 1.4%; 1950 undercount, 2.3%, and 1960 undercount, 2%. Estimates of various censuses not strictly comparable due to differences in timing, procedures, etc.</p> <p>Errors result from incorrect or incomplete responses, errors in coding and recording, and processing errors. For the 1976 national sample, about 700,000 units were not included in the sample coverage. A multistage estimation procedure corrected coverage deficiencies for the total, but subtotal biases still remain. A reinterview study also indicates some inconsistencies in the data.</p>	<p>U.S. Bureau of the Census, <i>U.S. Census of Population and Housing: Procedural History, 1960 and 1970</i>.</p> <p>U.S. Bureau of the Census, <i>Current Housing Reports</i>, Series H-150 and H-170, Annual Housing Survey.</p>
<p>First contact with a household is personal interview; subsequent interviews often conducted by phone.</p>	<p>As an example, S.E. for estimated annual average vacancy rate for rental units with six units or more is .2%. Other S.E.'s shown in census publication.</p>	<p>Due to interviews and respondent errors. Response rate for QHS is 95%. (See section I above for CPS.)</p>	<p>U.S. Bureau of the Census, <i>Current Housing Reports</i>, Series H-111, <i>Housing Vacancies</i>.</p>
<p>Data on single-unit firms estimated from administrative records; data on others from questionnaires. Five mail followups and phone calls to large companies held imputation from administrative records to a minimum. Approximately 4.1% of total value of shipments were unreported and required imputation.</p> <p>Survey conducted by mail with phone and mail followups of nonrespondents.</p>	<p>Not applicable.</p> <p>Estimated S.E. for number of employees and for value added totals given in annual publications. For State totals, estimated CV's are 2% or less, but vary considerably for detailed characteristics.</p>	<p>Based on evaluation studies, estimates of nonsampling errors are about 1.3% for estimated total payroll; 2% for total employment; and 1% for value of shipments.</p> <p>Response rate about 85%. Nonsampling errors include response, collection, reporting, and transcription errors, many of which are corrected through computer and clerical checks.</p>	<p>U.S. Bureau of the Census, <i>Census of Manufactures, 1972</i>, vol. 1, <i>Subject and Special Statistics</i>.</p> <p>U.S. Bureau of the Census, <i>Annual Survey of Manufactures</i>, and Technical Paper 24.</p>

DATA COLLECTION AND IMPUTATION PROCEDURES	INFORMATION ON ERRORS IN THE DATA		SOURCES OF ADDITIONAL MATERIAL
	Estimates of sampling error	Other (nonsampling) errors	
<p>Mail and telephone followups for nonrespondents. Data for nonrespondents and "non-selected" firms in retail trade and selected services from administrative records of IRS and the Social Security Administration. Imputation from related responses or administrative records from IRS or SSA.</p> <p>Survey questionnaire mailed early in year and followed by mail and phone followups. Imputation based on previous reports of the firm in current monthly surveys or latest business census, supplemented by administrative records.</p> <p>Imputation made for each nonresponse item and each item failing edit checks.</p>	<p>Not applicable.</p> <p>CV for national estimates of total sales and inventories is about 3.5%. For more detailed estimates by kind of business, or geographic areas, estimated CV's range from 0 to 7%, occasionally as high as 10.5%.</p> <p>CV's about .6% for estimated total retail sales, 1.4% for wholesale sales, 1.2% for wholesale inventories, and 3.5% for selected service receipts. Sampling errors shown in monthly publications.</p>	<p>Response rate 84.4% for single establishment firms; 92% for multi-establishment firms. Item response ranged from 60% to 90% with higher rates for less detailed questions.</p> <p>Nonresponse rate, 5% or less. Incomplete response ranges from 5% for inventories to 9% for sales.</p> <p>Nonresponse rate, 5% or refusals, about 10% monthly. Incomplete response for wholesale inventories and retail accounts receivable range between 20% and 25% monthly. Response error from area sample cases about .1%. Special studies indicate a tendency to underreport current month sales and exclude sales tax in sales reports.</p>	<p>U.S. Bureau of the Census, Appendix A of <i>Census of Retail Trade</i>, vol. 1; <i>Census of Selected Services</i>, vol. 1; <i>Census of Wholesale Trade</i>, vol. 1; and <i>Economic Censuses, Procedural History</i>, January 1976.</p> <p>U.S. Bureau of the Census, <i>Retail Trade</i>, 1975, BR-75-13; and <i>Census of Retail Trade</i>, 1972, vol. 1, Chapter 2.</p> <p>U.S. Bureau of the Census, <i>Monthly Retail Trade Reports</i>, <i>Monthly Wholesale Trade Reports</i>, and <i>Monthly Selected Services Receipts Reports</i>.</p>

APPENDIX IV

Guide to Sources of Statistics

Alphabetically arranged by subject, this guide contains references to the important primary sources of statistical information for the United States. Secondary sources have been included if the information contained in them is presented in a particularly convenient form or if primary sources are not readily available. Nonrecurrent publications presenting compilations or estimates for years later than 1968 or types of data not available in regular series are also included.

Much valuable information may also be found in State reports (see pp. 1008-1011) and in reports for particular commodities, industries, or similar segments of our economic and social structure, many of which are not included here.

Publications listed under each subject are divided into two main groups: "U.S. Government" and "Other." The location of the publisher of each report is given except for Federal agencies located in Washington, D.C. Most Federal publications may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, tel. (202) 783-3238, or from Government Printing Office bookstores in certain major cities. In some cases, Federal publications may be obtained from the issuing agency.

Major reports, such as the Census of Population, which consist of many volumes, are listed by their general, all-inclusive titles.

Abortions—see Vital Statistics.

Accidents—see also Health; Insurance; and Vital Statistics

U.S. Government

Bureau of Labor Statistics

Occupational Injuries and Illness in the United States, by Industry. Annual.

Bureau of the Census Publications

In most cases, separate reports of the most recent censuses are available for each State, subject, industry, etc. Complete information on publications of all the censuses and current surveys conducted by the Bureau of the Census appears in the *Bureau of the Census Catalog*, which is published quarterly and cumulated to the annual issue, with monthly supplements. A list of data files (computer tapes and punchcards) and unpublished materials is also included, beginning with the 1964 issues. A sample copy of the *Catalog* is available from the Bureau of the Census on request. The annual subscription price is \$19.00 for 4 quarterly issues and 12 monthly supplements (\$4.75 additional for foreign mailing).

Guide to State Statistical Abstracts

This bibliography includes the most recent statistical abstracts for States and Puerto Rico published since 1969 plus those that will be issued in late 1978 or early 1979. For some States, a near equivalent has been listed in substitution for, or in addition to, a statistical abstract. All sources contain statistical tables on a variety of subjects for the State as a whole, its component parts, or both. The page counts given for publications cited as "In process" are approximate.

Alabama

University of Alabama, University,
Center for Business and Economic
Research

Economic Abstract of Alabama. 1977.
300 pp.

Alaska

Department of Commerce and Eco-
nomic Development, Juneau,
Division of Economic Enterprise
The Alaska Economy. 96 pp. (Issued
annually.)

*The Alaska Economic Information
and Reporting Service Quarterly
Report*. 20 pp.

Arizona

Valley National Bank, Phoenix
Arizona Statistical Review, 34th ed.
1978.
