American Community Survey (ACS)
Why We Ask: Industry and Occupation

We ask about a person’s employer, the kind of business or industry of that employer, the work a person was doing, and that person’s most important duties at that job to produce industry and occupation statistics. These statistics are used to understand more about the labor force, to plan and measure education, employment, career development and job training programs, and to measure compliance with antidiscrimination policies.

Examples of Federal Uses
- Required to enforce nondiscrimination provisions in employment by private employers, government agencies, and labor organizations. Used in federal affirmative employment programs, to identify under-representation in job categories and specific occupations.
- Used to help make other federal surveys more accurate, including those that produce the nation’s official labor market estimates.
- Used in the formula that determines the allocation of funding to states and territories for the Mental Health Services Block Grant, and the Substance Abuse Prevention and Treatment Block Grant.

Examples of Other Uses
State and local agencies use these statistics to identify the percentage of people employed full-time, and the percentage of residents who work in each community year-round. Used by companies to decide where to locate new plants, warehouses, stores, or offices.
