

2010 Census Coverage Measurement Housing Unit Results for New Haven city, CT

2010 Census Housing Unit Count: 54,967

Net Coverage

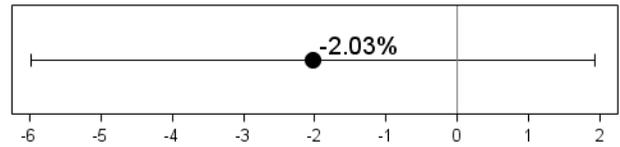

Net undercount is the CCM housing unit estimate minus the census count. Percent net undercount is the net undercount divided by the CCM housing unit estimate. A negative value is a net overcount.

Net Undercount: -1,100 (1,300 RMSE)
90% confidence interval: -3,200 to 1,000

Net undercount estimate is not significantly different from 0

Percent Net Undercount: -2.03% (2.40% RMSE)
90% confidence interval: -5.98% to 1.93%

Percent net undercount estimate is not significantly different from 0

Note: For estimates of the net undercount and percent net undercount, we provide estimates of the root mean squared error. These estimates of error add an estimate of the synthetic bias to the sampling error of the point estimates.

Components of Census Coverage

The 2010 CCM produced components of census coverage estimates that include erroneous enumerations and omissions for places with a 2010 Census total population count (including group quarters) of 500,000 and above. Only net coverage estimates are available for New Haven city, CT.
