EEO-ALL09W, EEO-CIT09W, and EEO-NCIT09W	Worksite	X	X	X (100K+)		X (100K+)	X (100K+)	
	EEO Table 10. Detailed Census Occupation (487) by Industry (91), Race/Ethnicity (15), Sex (2), Citizenship (2)							
EEO-ALL10W, EEO-CIT10W, and EEO-NCIT10W	Worksite	X	X	X (100K+)		X (100K+)	X (100K+)	
	EEO Table 11. Detailed Census Occupation (487) by Earnings (9), Race/Ethnicity (15), Sex (2), Citizenship (2)							
EEO-ALL11W, EEO-CIT11W, and EEO-NCIT11W	Worksite	X	X	X (100K+)		X (100K+)	X (100K+)	
	EEO Table 12. Detailed Census Occupation (487) by Older Age Groups (7), Race/Ethnicity (15), Sex (2), Citizenship (2)							
EEO-ALL12W, EEO-CIT12W, and EEO-NCIT12W	Worksite	X	X	X (100K+)		X (100K+)	X (100K+)	
	EEO Table 13 Unemployment Status. Detailed Census Occupation (488) by Unemployment Status (3), Race/Ethnicity (15), Sex (2)							
EEO-NCIT10W-K	Residence	X	X	X (100K+)			X (100K+)	
	EEO Table 14 Unemployment Status. Detailed Census Occupation (488) by Unemployment Status (3), Older Age Groups (7)							
EEO-NCIT10W-L	Residence	X	X	X (100K+)			X (100K+)	

¹Nation does NOT include PR. All other geographic summary levels include PR.

²The Hawaii version of each table will show 15 race/ethnicity categories, while the version for all areas except Hawaii will show only 12.

³In the worksite tables with commuter flows, if the subtraction of a place of 50,000 or 100,000, or more from a county creates a balance-of-county less than the population threshold for that table, the place is not shown separately. Aggregates of counties and places are not part of these tables; there are no data for worksites under 50,000 or aggregates of those worksites except in the "Balance of U.S.". Thus, the worksites do not add up to the U.S. total, but the sum of the 10 areas around a worksite will add up to the total number of workers in that worksite. Each worksite table with commuter flows has a residence population threshold of either 50,000 or 100,000 that both worksite and residence geography must meet. Each table will show a central worksite that meets this population threshold with flows from up to nine individual geographies that contribute commuters. One of these flows may be from the worksite itself, but each additional flow must meet the population threshold and contribute at least 50 unweighted commuters across all occupations. As a result, the tables will also show one residual area called the "balance of the U.S.". This tenth residence "area" contains contributing geographies that are not among the nine largest, contributing geographies that do not meet the population threshold, and contributing geographies that do not contribute 50 unweighted commuters, across all occupations, to the worksite. The worksite tables with commuter flows from residence counties to worksite counties include county-to-county flows and balance of the U.S. to county only.

⁴The worksite tables with commuter flows to worksite places may include county-to-place flows, place-to-place flows, and county-balance-to-place flows.
