Table A-1.

Households by Total Money Income, Race, and Hispanic Origin of Householder: 1967 to 2013—Con.

(Income in 2013 CPI-U-RS adjusted dollars. Households as of March of the following year. Beginning with 2010, standard errors were calculated using replicate weights. Before 2010, standard errors were calculated using the generalized variance function. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see *ftp://ftp2.census.gov/programs-surveys/cps/techdocs/cpsmar14.pdf)*

Race and Hispanic origin of householder and year	Number (thousands)	Percentage distribution										Median income (dollars)		Mean income (dollars)	
		Total	Under $15,000	$15,000 to $24,999	$25,000 to $34,999	$35,000 to $49,999	$50,000 to $74,999	$75,000 to $99,999	$100,000 to $149,999	$150,000 to $199,999	$200,000 and over	Value	Standard error	Value	Standard error

N Not available.

Z Represents or rounds to zero.

[1] Data are based on the CPS ASEC sample of 68,000 addresses. The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of the 2013 data for this table is the portion of the CPS ASEC sample which received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

[2] Implementation of Census 2010-based population controls.

[3] Median income is calculated using $2,500 income intervals. Beginning with 2009 income data, the Census Bureau expanded the upper income intervals used to calculate medians to $250,000 or more. Medians falling in the upper open-ended interval are plugged with "$250,000." Before 2009, the upper open-ended interval was $100,000 and a plug of "$100,000" was used.

[4] Data have been revised to reflect a correction to the weights in the 2005 ASEC.

[5] Implementation of a 28,000 household sample expansion.

[6] Implementation of Census 2000-based population controls.

[7] Full implementation of 1990 census-based sample design and metropolitan definitions, 7,000 household sample reduction, and revised editing of responses on race.

[8] Introduction of 1990 census sample design.

[9] Data collection method changed from paper and pencil to computer-assisted interviewing. In addition, the 1994 ASEC was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings limits increased to $999,999; social security limits increased to $49,999; supplemental security income and public assistance limits increased to $24,999; veterans' benefits limits increased to $99,999; child support and alimony limits decreased to $49,999.

[10] Implementation of 1990 census population controls.

[11] Implementation of a new CPS ASEC processing system.

[12] Recording of amounts for earnings from longest job increased to $299,999. Full implementation of 1980 census-based sample design.

[13] Implementation of Hispanic population weighting controls and introduction of 1980 census-based sample design.

[14] Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.

[15] First year medians were derived using both Pareto and linear interpolation. Before this year, all medians were derived using linear interpolation.

[16] Some of these estimates were derived using Pareto interpolation and may differ from published data, which were derived using linear interpolation.

[17] Implementation of a new CPS ASEC processing system. Questionnaire expanded to ask 11 income questions.

[18] Full implementation of 1970 census-based sample design.

[19] Introduction of 1970 census sample design and population controls.

[20] Implementation of new CPS ASEC processing system.

[21] Beginning with the 2003 CPS, respondents were allowed to choose one or more races. White alone refers to people who reported White and did not report any other race category. The use of this single-race population does not imply that it is the preferred method of presenting or analyzing the data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White ***and*** American Indian and Alaska Native or Asian ***and*** Black or African American, is available from Census 2010 through American FactFinder. About 2.9 percent of people reported more than one race in Census 2010.

[22] For the year 2001 and earlier, the CPS allowed respondents to report only one race group.

[23] Black alone refers to people who reported Black and did not report any other race category.

[24] Asian alone refers to people who reported Asian and did not report any other race category.

[25] Because Hispanics may be any race, data in this report for Hispanics overlap with data for racial groups. Being Hispanic was reported by 14.2 percent of White householders who reported only one race, 4.6 percent of Black householders who reported only one race, and 2.6 percent of Asian householders who reported only one race. Data users should exercise caution when interpreting aggregate results for the Hispanic population and for race groups because these populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and recency of immigration. Data were first collected for Hispanics in 1972.
