

Table A-4.

## Number of People by Type of Health Insurance Coverage by Household Income and Income-to-Poverty Ratio: 2014 and 2015

(Numbers in thousands, margins of error in thousands. Population as of March of the following year. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see [www2.census.gov/programs-surveys/cps/techdocs/cpsmar16.pdf](http://www2.census.gov/programs-surveys/cps/techdocs/cpsmar16.pdf))

Characteristic	Total		Any health insurance					Private health insurance <sup>3</sup>					Government health insurance <sup>4</sup>					Uninsured

\* Changes between the estimates are statistically different from zero at the 90 percent confidence level.

<sup>1</sup> Details may not sum to totals because of rounding.

<sup>2</sup> A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights. For more information, see "Standard Errors and Their Use" at [www2.census.gov/library/publications/2016/demo/p60-257sa.pdf](http://www2.census.gov/library/publications/2016/demo/p60-257sa.pdf).

<sup>3</sup> Private health insurance includes coverage provided through an employer or union, coverage purchased directly by an individual from an insurance company, or coverage through someone outside the household.

<sup>4</sup> Government health insurance coverage includes Medicaid, Medicare, TRICARE, CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs), and care provided by the Department of Veterans Affairs and the military.

Note: The estimates by type of coverage are *not* mutually exclusive; people can be covered by more than one type of health insurance during the year.
