* Changes between the estimates are statistically different from zero at the 90 percent confidence level.

¹ Details may not sum to totals because of rounding.

² A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights. For more information, see "Standard Errors and Their Use" at <<https://www2.census.gov/library/publications/2019/demo/p60-267sa.pdf>>.

³ Private health insurance includes coverage provided through an employer or union, coverage purchased directly, or TRICARE.

⁴ Public health insurance coverage includes Medicaid, Medicare, CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs), and care provided by the Department of Veterans Affairs and the military.

⁵ Individuals are considered to be uninsured if they do not have health insurance coverage for the entire calendar year.

⁶ Children under the age of 19 are eligible for Medicaid/CHIP.

⁷ Individuals aged 19 to 25 years may be eligible to be a dependent on a parent's health insurance plan.

Note: The estimates by type of coverage are not mutually exclusive; people can be covered by more than one type of health insurance during the year.
