

2000 Health Insurance Coverage Status by Age for Counties and States: County File Record Layout

Position	Variable
1-2	FIPS state code (00 for U.S. record)
4-6	FIPS county code (000 for U.S. record and 00 for state level records)
8-9	Postal state abbreviation
11-58	State or county name
60-69	Number of insured all ages
71-80	Number of uninsured all ages
82-91	90% confidence interval of number insured/uninsured all ages (\pm)
93-96	Percent of uninsured all ages
98-101	90% confidence interval of percent uninsured all ages (\pm)
103-112	Number of insured under age 18
114-123	Number of uninsured under age 18
125-134	90% confidence interval of number insured/uninsured under age 18 (\pm)
136-139	Percent of uninsured under age 18
141-144	90% confidence interval of percent uninsured under age 18 (\pm)
146-175	File name and creation date

Notes:

- The width of the confidence intervals for the number insured and the number uninsured are the same. This follows from the fact that the two numbers must add to a known population. A random deviation in one must thus be mirrored exactly in the other, so a measure of variability like the standard deviation must be the same.
- For certain counties the lower confidence bound may be less than zero.
- Due to rounding, the sum of the county estimates within a state may not equal the state estimate and the sum of the state estimates may not equal the national estimate from the Annual Social and Economic Supplement of the Current Population Survey.
