Activity Items

The following items are part of this activity and appear at the end of this student version.

- Item 1: Map of the Caribbean Area
- Item 2: Map of the Pacific Area
- Item 4: Population by Race and Ethnic Origin by Island Area for Pacific Islands: 2010
- Item 5: Age and Sex Structure for U.S. Island Areas: 2000 and 2010

Student Learning Objectives

- I will be able to analyze census data to identify the demographic characteristics of populations in different U.S. island territories.
- I will be able to make inferences about how the census data could be used by local leaders.
1. Review Item 1: Map of the Caribbean Area and Item 2: Map of the Pacific Area then color the U.S. island territories with a red colored pencil.

2. Looking at the two maps, what challenges do you think the United States faces in controlling its territories, which are referred to as protectorates?

3. What do you think the United States gains from having these areas as protectorates?

4. Use Item 3: Change in Population for U.S. Island Areas: 1990-2020 to answer the following questions.
   a. Which island area saw the greatest change (including both increases and decreases) in its population from 1990 to 2000? What about from 2000 to 2010? Support your answer with specific data from the item.
b. What do you think could explain these population changes?

5. Imagine you were a local leader in the island area(s) you named in question 4 to answer the following questions and prompts.
   a. How do you think these population changes would affect the economy?

   b. What is the projected change in your population for 2010–2020? Explain how you could use this information to plan for the future. Support your answer with specific data from the item.

6. Use Item 4: Population by Race and Ethnic Origin by Island Area for Pacific Islands: 2010 to answer the following questions and prompts.
   a. Record your observations and questions about the data, being sure to note details that surprise or intrigue you.
b. Which Pacific island territory appears to be the most racially diverse? Support your answer with specific data from the item.

7. Use Item 5: Age and Sex Structure for U.S. Island Areas: 2000 and 2010 to answer the following questions and prompts.
   a. Record your observations and questions about the data.

   b. Of the four island area populations shown, which had the largest percentage of people 14 and younger?

   c. Which island area had the largest percentage of people older than 60? Why do you think this was the case?
8. Explain how the socioeconomic needs of a country with a younger population are different from those of a country with an older population.

9. In 1790, the U.S. Congress authorized a decennial census (a once-a-decade count of the U.S. population) to determine the apportionment of seats in the U.S. House of Representatives. However, the U.S. island territories are not represented in Congress, even today. Using what you learned in this activity, the items, and your background knowledge, explain why — if not for congressional representation — the Census Bureau still counts the island areas’ populations.

Item 4: Population by Race and Ethnic Origin by Island Area for Pacific Islands: 2010

Figure 10.
Population by Race and Ethnic Origin by Island Area for Pacific Islands: 2010

Note: Race and ethnic origin data for Pacific Islands are collected through one census question. Race and ethnic origin groups of at least 1,000 population are shown. For American Samoa, race and ethnic origin groups of at least 450 population are shown.
